# 1 BASIC OVERVIEW AND DIMENSIONS

This 10x20 gable shed is a large size shed that is perfect for storing your supplies and spending leisure hours. It is a storage shed with a garage door, entrance door and 2 windows. The overall height of the shed is 12 feet including the roof and the width is 10 feet and 1 inch from the front. The width from the right side is 20 feet and 1 inch while the depth is 21 feet and 7 1/2 inches. There are two windows on the right wall, each with a measurement of 3x3. The front door needs to be 6 feet and 8 1/2 inches in height and 3 feet and 8 inches in width.

**SIDE VIEW**

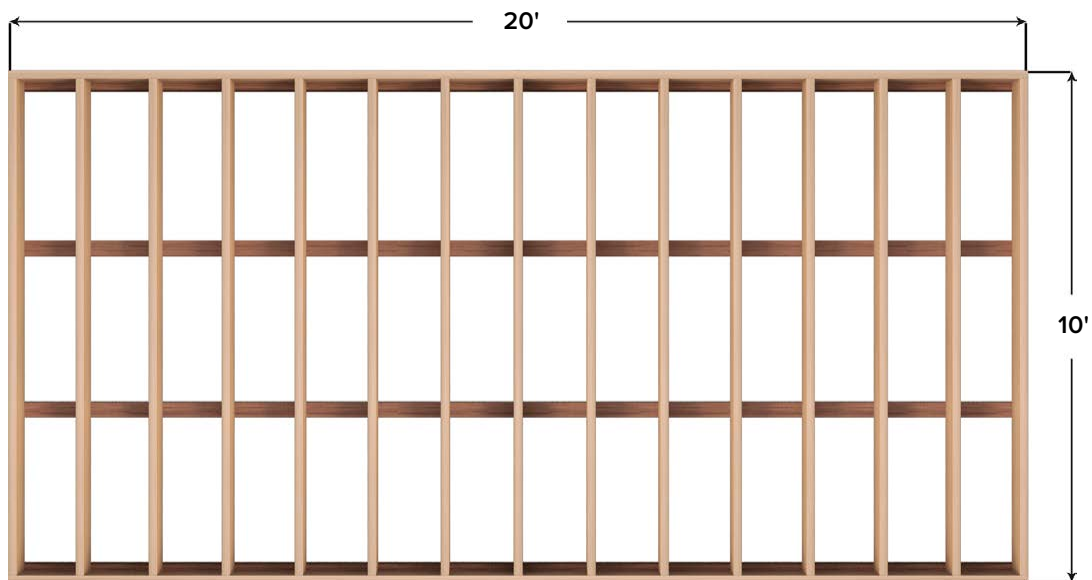

**WINDOW**

## NOTE

Professional tip section is only available in PREMIUM (full) version of the plan.

## 2 FOUNDATION AND FLOOR

You will start with building the foundation and the floor of the shed. Note that the foundation needs to be resilient and accurately designed. Since your shed's entire load will be on the foundation, you need to make sure it is built right. You will use pressure treated timber to create skids as shown in the figure. The width of the foundation should be 20 feet and the height should be 10 feet. Use  $\frac{3}{4}$  inch thick tongue and groove plywood for the floor.

FOUNDATION BASE

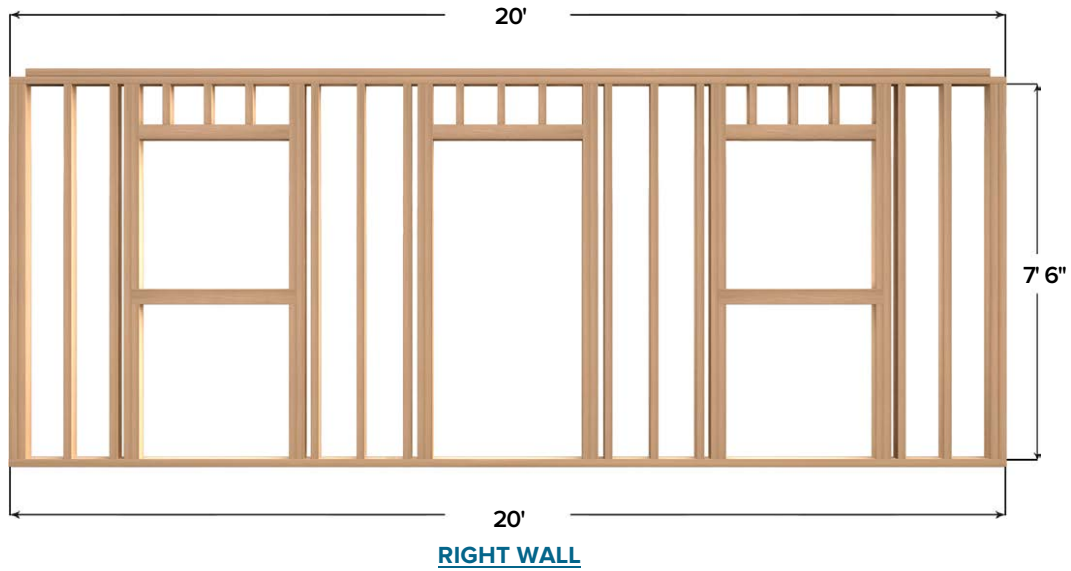

FLOOR

### NOTE

Professional tip section is only available in PREMIUM (full) version of the plan.

### 3 WALL STRUCTURES

Once the foundation and floor is built, the next step is to start building the wall structures. You will use pressure heated timber to build the right and the left wall. The width of both the walls should be 20 feet and the height should be 7 feet and 6 inches. The right wall will have openings for the front door and the two windows.

#### NOTE

Professional tip section is only available in PREMIUM (full) version of the plan.

## 4 WALL STRUCTURES

Once the right and the left walls are built, the next step is to start building the front and back wall. The width of the top plate of the walls should be 10 feet while the bottom plate's width should 9 feet and 4 inches. The height of the walls should be 7 feet and 6 inches. Use pressure heated timber to build the structures.

**FRONT WALL**

**BACK WALL**

### NOTE

Professional tip section is only available in PREMIUM (full) version of the plan.

## 5 ROOF SECTION

After building and installing the walls, start building the roof. Note that roofing is quite a strenuous task which is why we recommend acquiring additional help for the process.

You will build 12 rafters each side and install them as shown in the image. The rafters will be spread over a width of 20 feet 7 inches.

### NOTE

Professional tip section is only available in PREMIUM (full) version of the plan.
