12-4 Inscribed Angles

String art often begins with pins or nails that are placed around the circumference of a circle. A long piece of string is then wound from one nail to another. The resulting pattern may include hundreds of *inscribed angles*.

12-4 Inscribed Angles

An **inscribed angle** is an angle whose vertex is on a circle and whose sides contain chords of the circle. An **intercepted arc** consists of endpoints that lie on the sides of an inscribed angle and all the points of the circle between them. A chord or arc **subtends** an angle if its endpoints lie on the sides of the angle.

12-4 Inscribed Angles

$\angle DEF$ is an **inscribed angle**.

\widehat{DF} is the **intercepted arc**.

\widehat{DF} subtends $\angle DEF$.

Theorem 11-4-1

Inscribed Angle Theorem

The measure of an inscribed angle is half the measure of its intercepted arc.

$$m\angle ABC = \frac{1}{2}m\widehat{AC}$$

Corollary 11-4-2

COROLLARY

If inscribed angles of a circle intercept the same arc or are subtended by the same chord or arc, then the angles are congruent.

$\angle ACB$, $\angle ADB$, and $\angle AEB$ intercept \widehat{AB} .

CONCLUSION

$\angle ACB \cong \angle ADB \cong \angle AEB$
(and $\angle CAE \cong \angle CBE$)

$$5a = 70$$

$$a = 14$$

Def of rt. \angle

Substitute $5a + 20$ for $m\angle WZY$.

Subtract 20 from both sides.

$$2b - 7 = 0$$

$$2b = 7$$

$$b = 3.5$$

$$m\angle LJM = 5(3.5) - 7 = 10.5^\circ$$

$m\angle LJM$ and $m\angle LKM$

Substitute the given values.

Subtract $3b$ from both sides.

Add 7 to both sides.

Divide both sides by 2.
