## **2000 Seed Dealer Update Meetings**

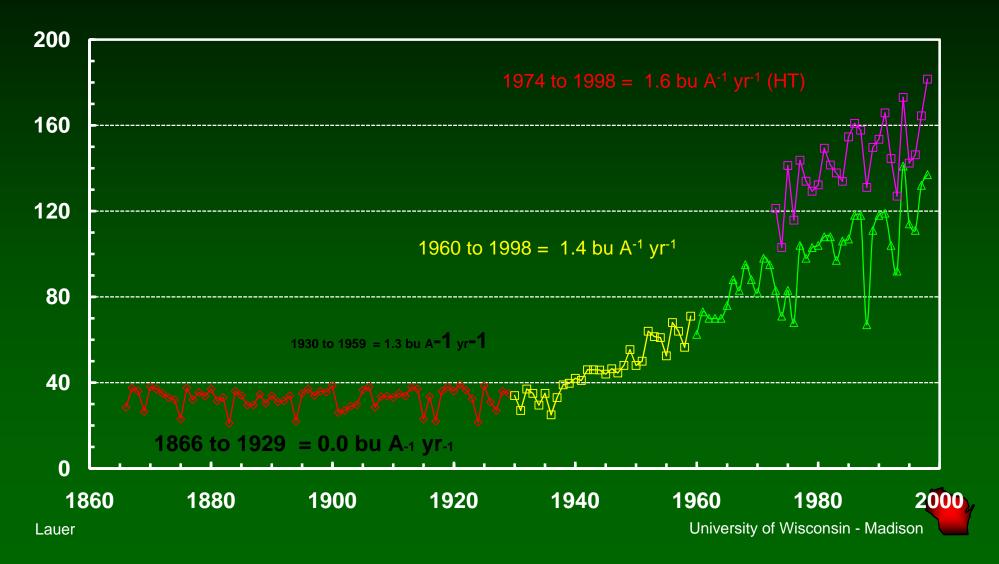

**Joe Lauer** 

### **University of Wisconsin**

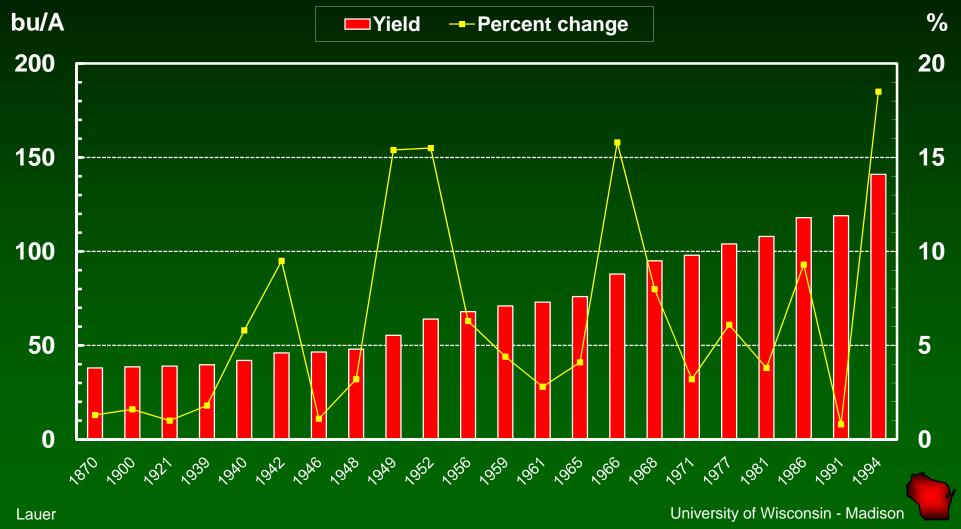

## Corn Yield (bu/A) in Wisconsin Since 1866

## Years of Record Corn Yield and the Percent Increase Over the Previous Record Year

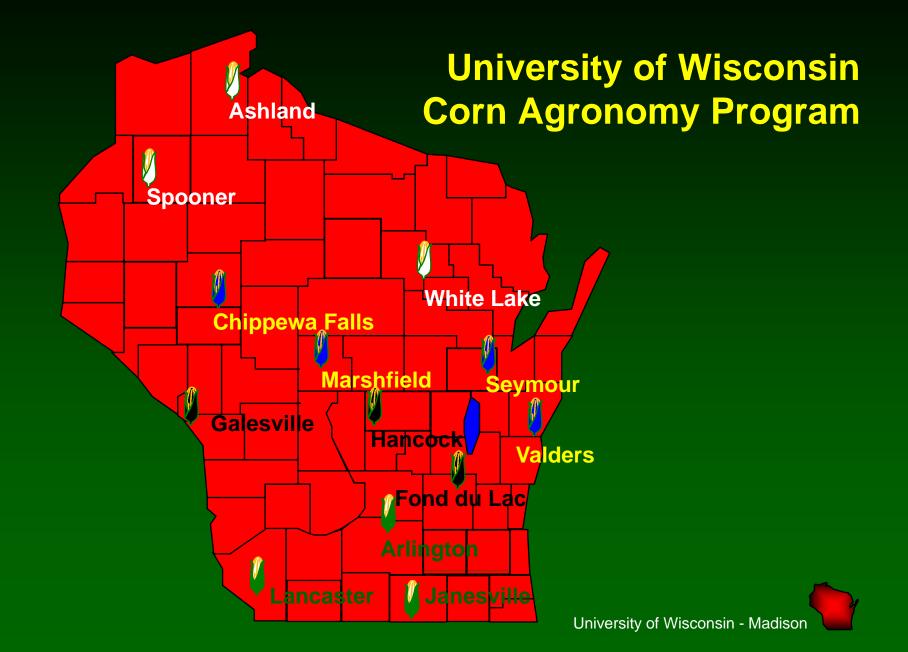

## **Factors Contributing to Continued Yield Gain**

 Resistance to root and stalk lodging

> Necessary for machine harvesting at higher plant densities

- Resistance to diseases little data to support
- Resistance to insects
- Improvement of stay-green
   Continuous improvement of 2nd ECB resistance (Duvick 1984)
- Use of single-cross hybrids

- Resistance to barrenness
- Better pollen production
- Production under higher population
- Earlier planting date
   Better seed quality
   Improved cold tolerance, better germination and emergence
- Use of commercial fertilizers
- Pest control techniques

## 1999 Environment Characteristics for Corn Production in Wisconsin

#### Weather

 <u>Temperature</u>: Faster GDU accumulation than normal over entire growing season.
 <u>Precipitation</u>: Adequate and timely rains through pollination.
 Little precipitation during grainfilling.
 <u>Events</u>: Scattered hail

- Planting progress was faster than normal
- Pollination began earlier than normal

 Silage harvest began earlier than normal. Grain dry-down was faster than normal.

• Pests

 <u>Weeds</u>: No major problems.
 <u>Diseases</u>: Eyespot, Anthracnose and Gray Leaf Spot were observed often and early.
 Mycotoxin development in corn silage in eastern WI.
 <u>Insects</u>: Low European corn borer pressure. High Corn rootworm pressure in scattered areas.

## 1999 Wisconsin Corn Performance Trials Grain Summary

	1989-1998		1999		Percent
Location	N	Yield	N	Yield	Change
Arlington	1727	185	198	222	+ 20
Janesville	1727	177	198	222	+ 25
Lancaster	1727	170	198	192	+ 13
Fond du Lac	1525	159	159	207	+ 30
Galesville	1525	157	159	202	+ 29
Hancock	1524	178	159	202	+ 13
Chippewa Falls	1276	147	168	169	+ 15
Marshfield	990	137	168	179	+ 31
Seymour	922	144	69	171	+ 19
Valders	1400	145	168	199	+ 37
Ashland	129	129	16	157	+ 22
Spooner	1901	123	189	168	+ 37
White Lake	582	85	63	147	+ 73

Note: Seymour average includes New London 1989-1992.

University of Wisconsin - Madison

## Using Wisconsin Corn Hybrid Performance Trial Results

- Use <u>multi-environment average</u> data
  - Begin with trials in zone(s) nearest you
  - Compare hybrids with similar maturities
  - Use many years and locations
- Evaluate <u>consistency</u> of performance
  - Check performance in other zones and locations
  - Check other reliable unbiased trials
  - Be wary of inconsistent performance.

## You are taking a tremendous gamble if basing your hybrid selection decisions on 1 or 2 local test plots

## **Multi- versus Single-Environment Trials**

## Use <u>Multi-Environment</u> information to evaluate:

- Grain yield
- Moisture and maturity
- Standability

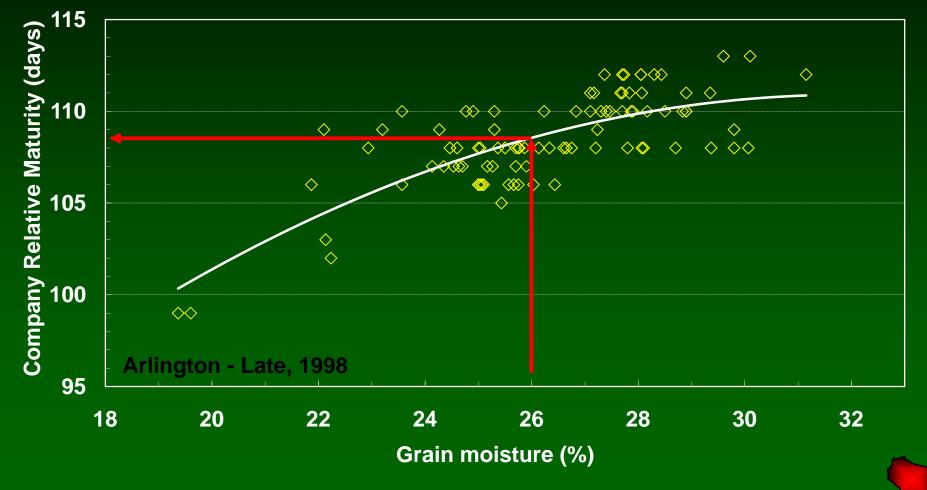

## Use <u>Single-Environment</u> information to evaluate:

- Consistency of performance
- Test weight
- Dry-down rate
- Grain quality
- Ease of combine-shelling or picking

## **Methods for Determining Corn Hybrid Maturity**

- Minnesota Relative Maturity System (1929)
- Growing Degree Days (1970)
- Company ratings
- Wisconsin Comparative Relative Maturity rating

## Method for determining Wisconsin comparative relative maturity - WI CRM (n=92)

University of Wisconsin - Madison

## Wisconsin Corn Hybrid Silage Performance Trials

- Each hybrid is tested at 2 locations in a production zone
- Seed companies are encouraged to enter silage hybrids in at least one grain trial

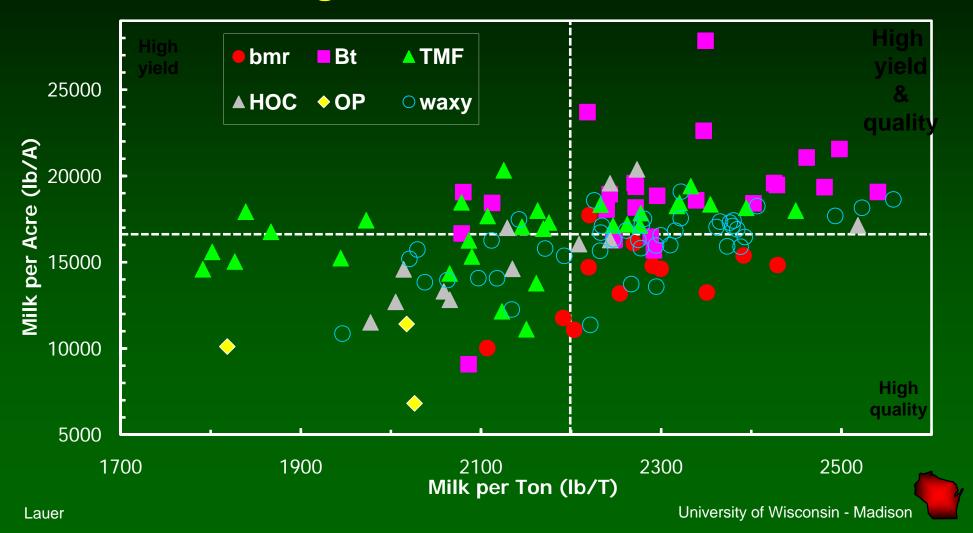

## 1999 Wisconsin Corn Performance Trials Silage Summary

	1989-1998		19	999	Percent
Location	N	Yield	N	Yield	change
Arlington	322	9.3	66	10.1	+ 9
Lancaster	245	7.7	66	8.9	+ 16
Fond du Lac	207	8.7	67	9.8	+ 13
Galesville	207	8.0	67	8.1	+ 1
Marshfield	346	6.6	60	7.5	+ 14
Valders	273	7.0	60	8.0	+ 14
Ashland	93	7.0	16	8.0	+ 14

University of Wisconsin - Madison

## Corn Specialty Hybrid Silage Yield and Quality During 1990-1998 in Wisconsin

## **Criteria for Selecting Silage Hybrids**

- Grain yield: allows flexibility (dual purpose)
- Whole plant silage yield
- Relative maturity: 5-10 days later than grain hybrids
- Standability: allows flexibility
- Pest resistance
- Silage quality

"Variation for silage yield and quality exists among commercial hybrids in Wisconsin."

## **GMO** Issues

- Successes
- Agronomic Performance
  - Yield lag and drag
  - Pollen drift
- Marketing
  - Premiums
  - Emotional
- Pest Resistance Management
- Crop Rotation

## **Specialty Corns**

#### **Specialty Marketing Corns**

- Amylomaize (high amylose)
- Waxy corn
- High-protein (lysine) corn
- High-oil corn
- White & Yellow Food corn
- HAP corn (high available P)
- Silage corn
- Sweet corn and Popcorn

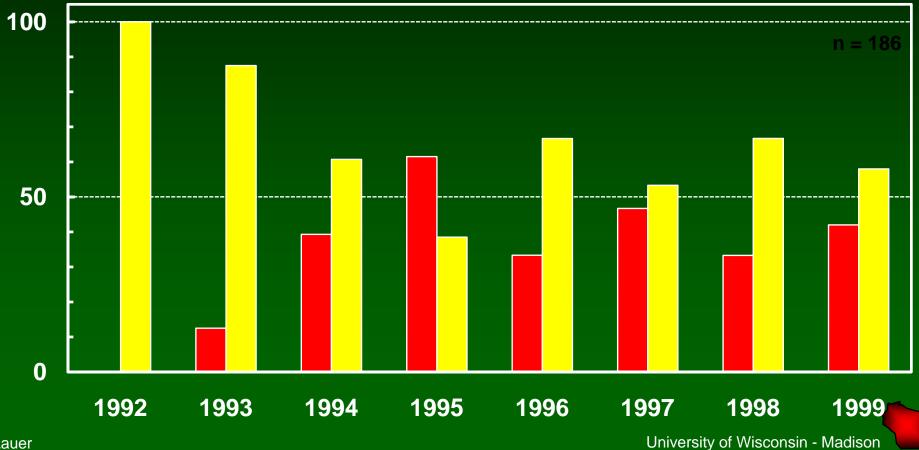

#### **Specialty Management Corns**

- "IMI" Imidazolinone resistant or tolerant
- "SR" Sethoxydim resistant
- "Liberty Link" Glufosinate resistant
- "Bt"
- "Round-up Ready" Glyphosate resistant
- "Gene stacking"
   Bt,LL; Bt,IMI

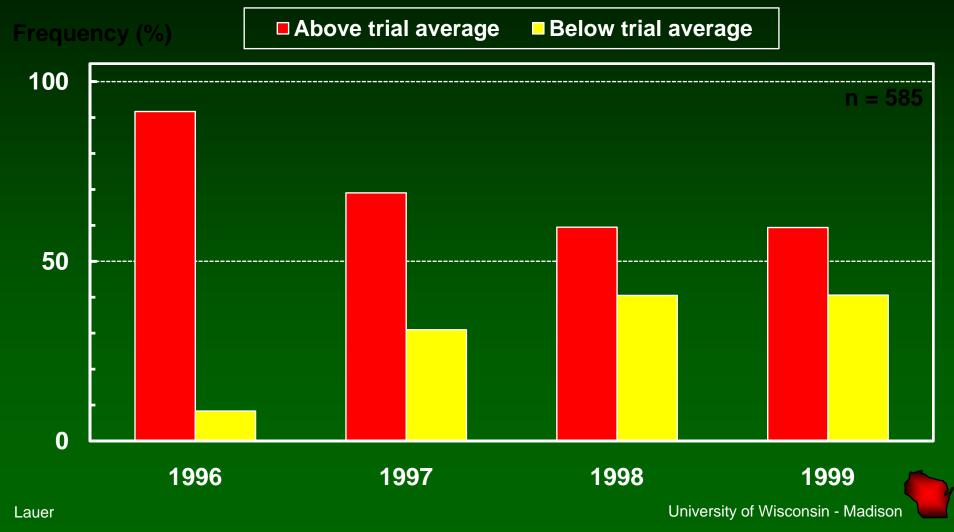

University of Wisconsin - Madison

## Yield of "IMI" Hybrids in Relation to the Average of **All Hybrids in a Wisconsin Trial**

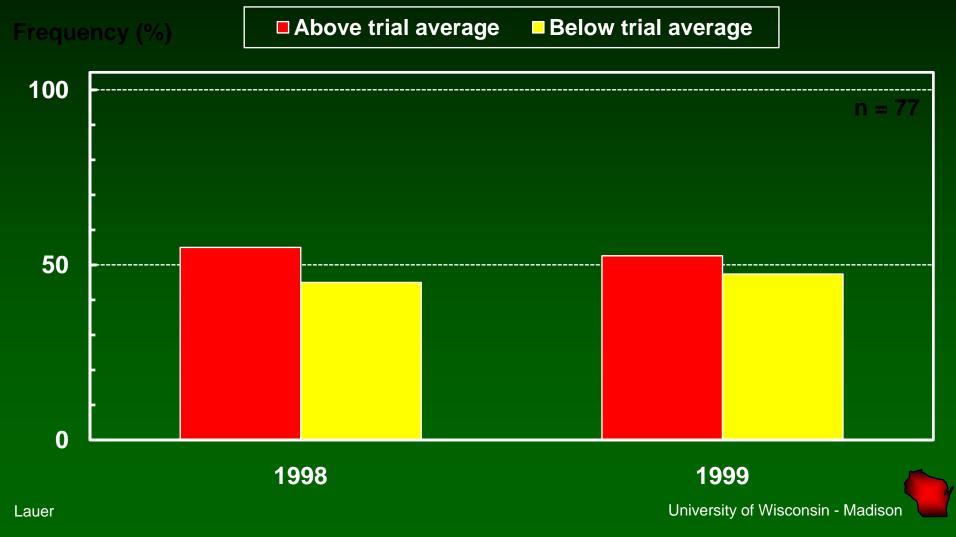

Above trial average Below trial average

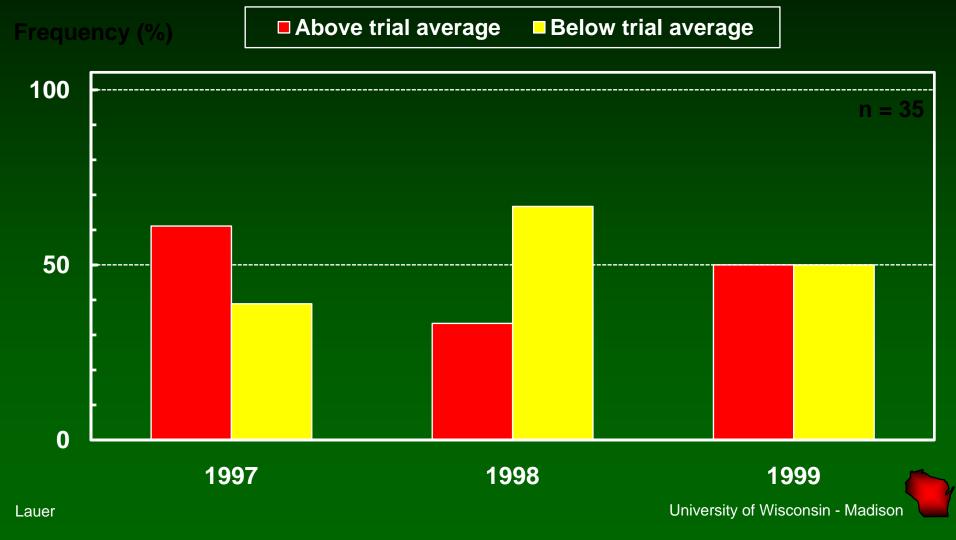

## Yield of "BT" Hybrids in Relation to the Average of All Hybrids in a Wisconsin Trial

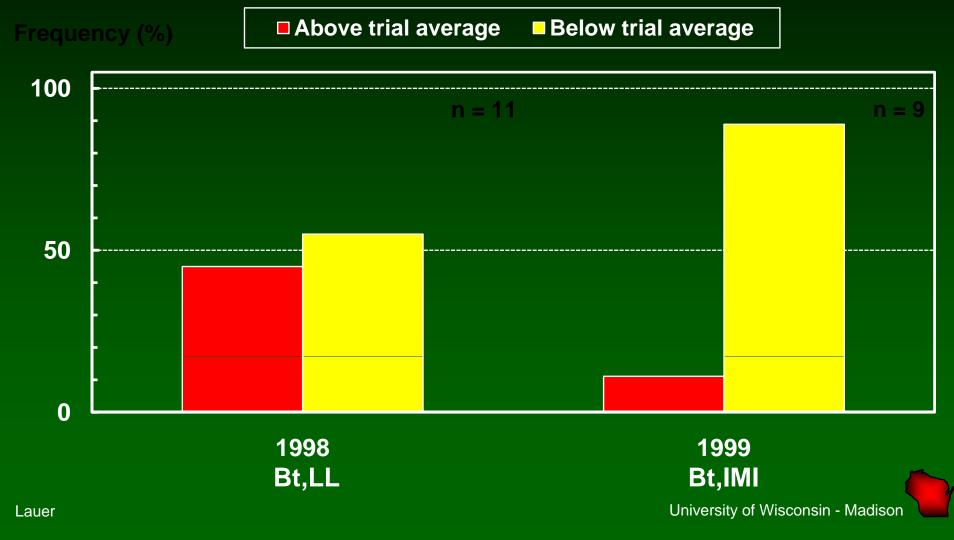

## Yield of "Round-up Ready" Hybrids in Relation to the Average of All Hybrids in a Wisconsin Trial

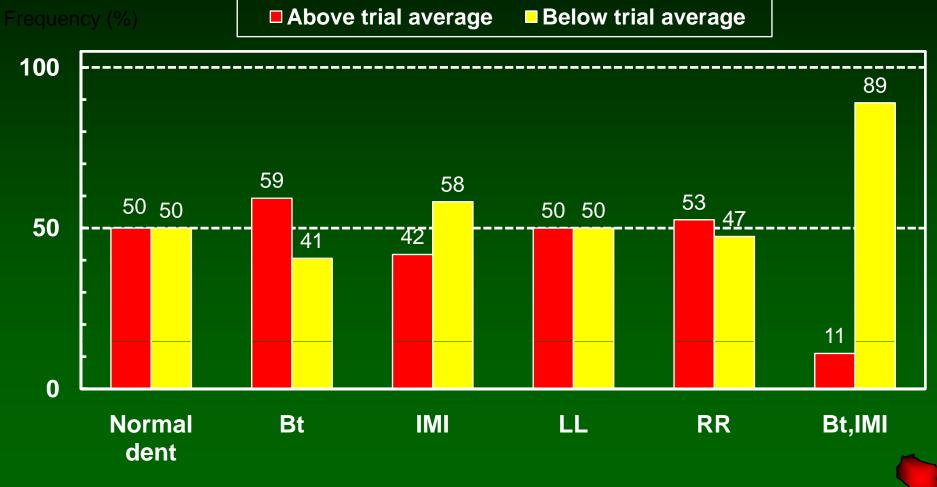

## Yield of "Liberty Link" Hybrids in Relation to the Average of All Hybrids in a Wisconsin Trial

## Yield of "Gene Stacked" Hybrids in Relation to the Average of All Hybrids in a Wisconsin Trial

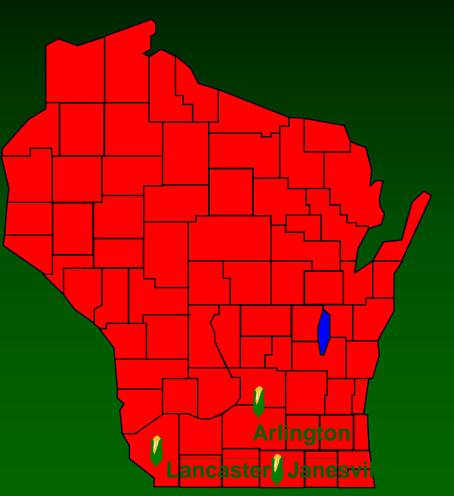

## Yield of Specialty Hybrids in Relation to the Average of All Hybrids in the 1999 Wisconsin Hybrid Trials

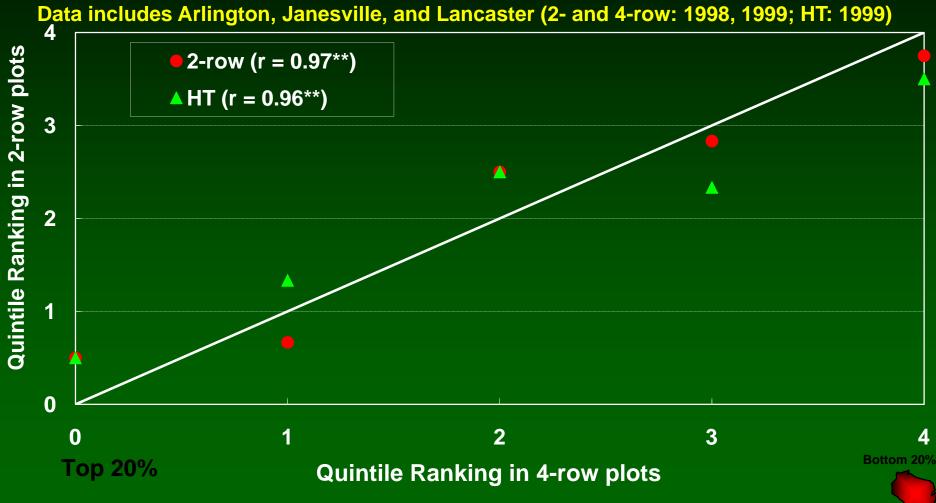

University of Wisconsin - Madison

## Comparison of 2-row and 4-row Plots Materials and Methods

- RCB in split-plot arrangement
- Main: Plot size
  - 2-row (5' x 25')
  - 4-row (10' x 25')
- Split: Randomly selected hybrids
  - 1998: Maturity
  - **1999: Height**
- In 1999, chose same hybrids as in HT
  - Planted adjacent to HT

University of Wisconsin - Madison

## Hybrid Challenge I Materials and Methods

- Farmers feel that results from small plots do not relate to field scale production.
- Paul Carter challenged Farmer
   Hybrid selected using UW results

Hybrid selected by seed company, consultant, or farmer

- Random odds = ~50%
- Trials replicated and randomized (1991: n = 60)
- Large plots: 0.1 to 0.5 A

 Farm-scale machinery used to plant, manage and harvest plots

#### Conclusions

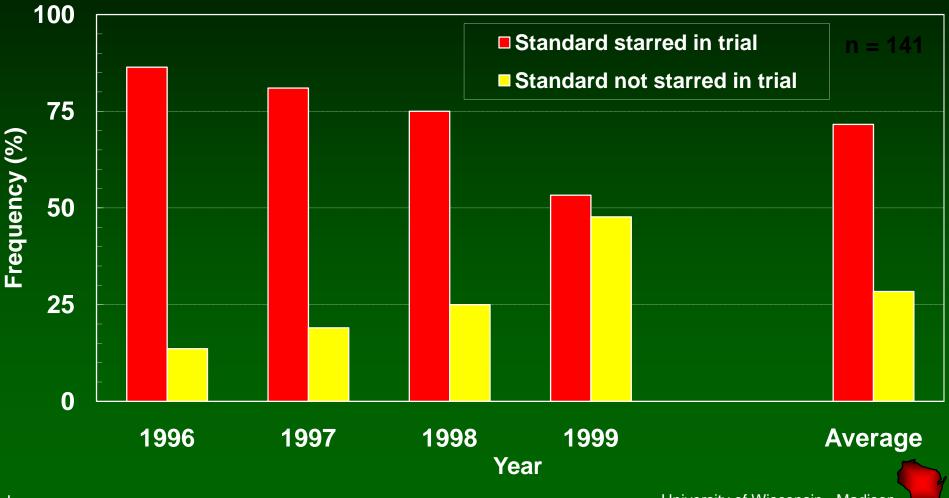

- UW hybrids were starred (beat or tied farmer hybrid) in 47 of 60 trials or 78% of time
- UW Trial results were a useful predictor of future hybrid performance

## Hybrid Challenge II Materials and Methods

- Data set = WAPAC Hybrid Performance Trials
  - 2 "standard" hybrids: Selected using UW trial results.Used to "set the bar"
    6 to 10 other hybrids. "Best of the best" Selected by seed companies, consultants, and farmers
- Random odds = ~25%

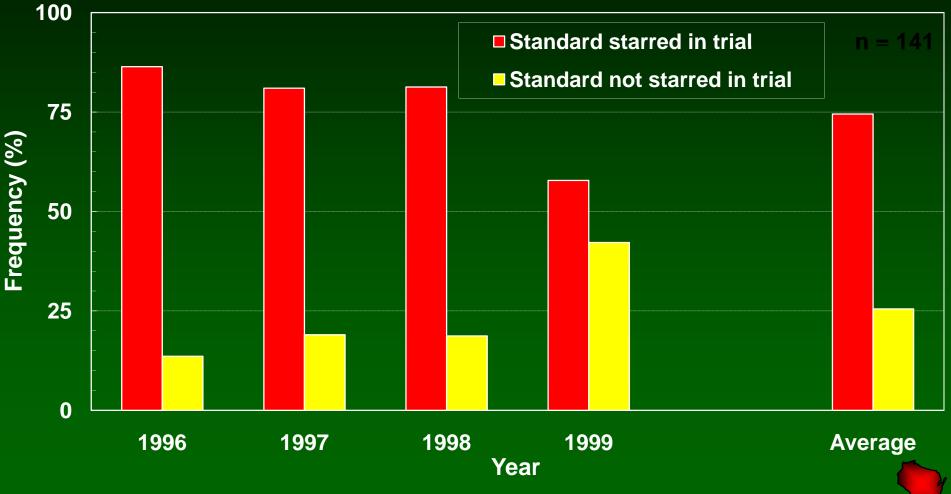

- Trials replicated and randomized
- Multi-environments: same set of hybrids grown at numerous locations
- Large plots: 0.1 to 0.5 A
- Farm-scale machinery used to plant, manage and harvest plots

## Hybrid Challenge II - Grain yield Frequency of trials with starred standard hybrids.

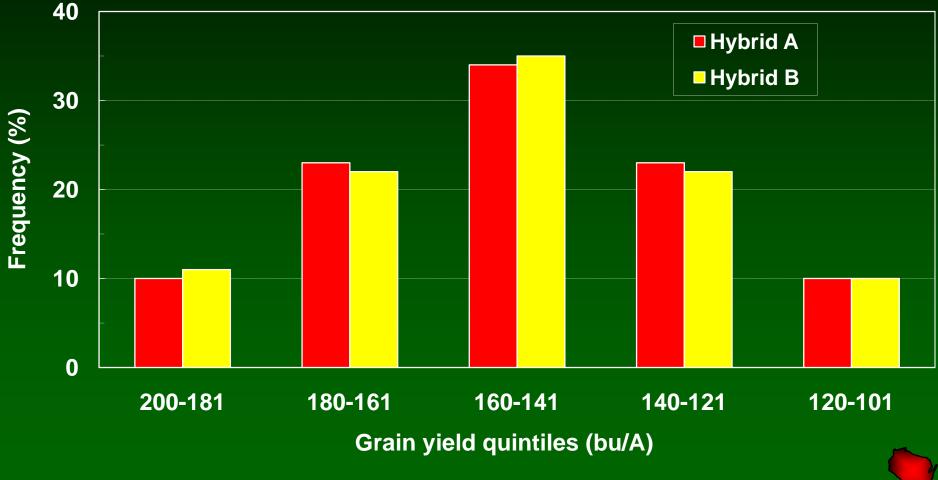

University of Wisconsin - Madison

## Hybrid Challenge II - Grower return Frequency of trials with starred standard hybrids.

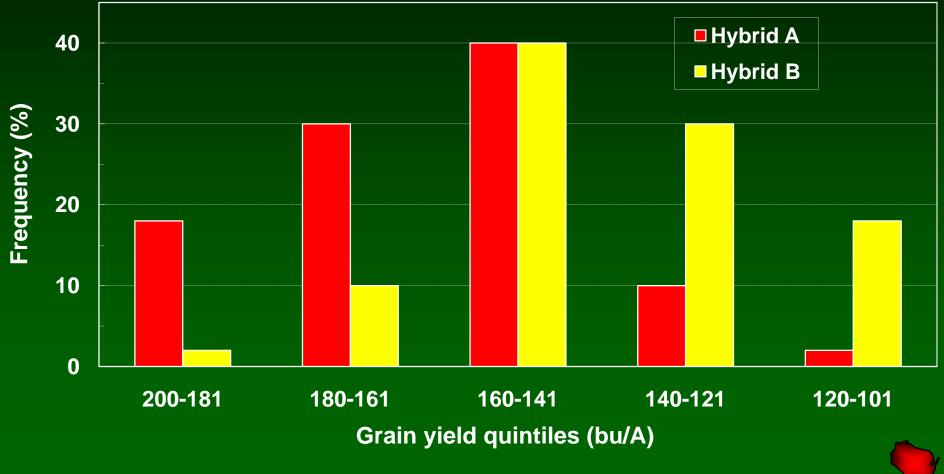

University of Wisconsin - Madison

## Quintile frequency of two hybrids in a trial where there is no significant difference

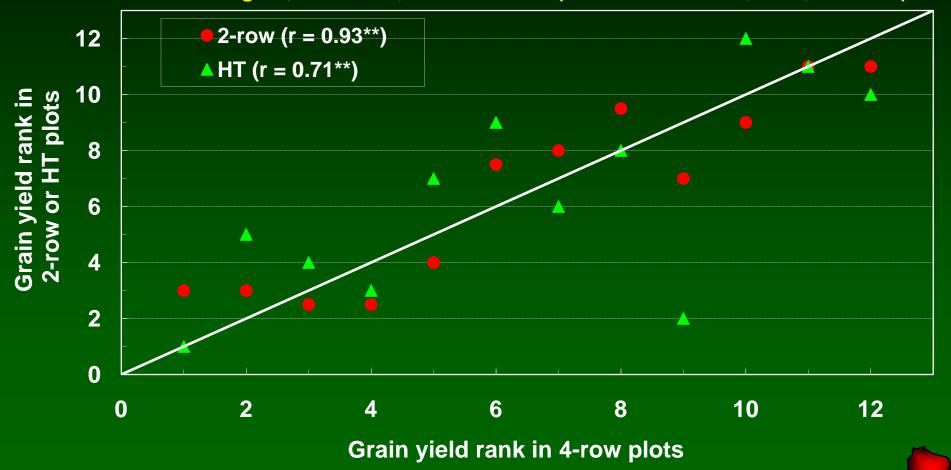

University of Wisconsin - Madisor

## Quintile frequency of two hybrids in a trial where there is a significant difference

University of Wisconsin - Madison

Data includes Arlington, Janesville, and Lancaster (2- and 4-row: 1998, 1999; HT: 1999)

University of Wisconsin - Madison
