

2006 LESOTHO POPULATION AND HOUSING CENSUS

Volume 11 Census Tables Report

Ministry of Finance and Development Planning
Bureau of Statistics
P.O. 455, Maseru 100, Lesotho

Kingdom of Lesotho
2006 Lesotho Population and Housing Census
Volume II Census Tables

Maseru, April 2011

Ministry of Finance and Development Planning

Bureau of Statistics

P.O. Box 455, Maseru 100, Lesotho

***Mission: Provide accurate, timely and reliable
culturally relevant and
internationally comparable statistical data for
evidence - based
planning, decision making, research, policy,
program formulation, planning and decision
making processes and monitoring and evaluation.***

The 2006 Population and Housing Census results are presented in the following reports:

- ❖ Census Village List
- ❖ Census Post Enumeration Survey
- ❖ Census Analytical reports (Volume IIIA, Population Dynamics Report and Volume IIIB, Socio economic Characteristics)
- ❖ Census Tables
- ❖ Census Atlas

This report is divided into twelve sections from the census data based on the following themes:

- Population size and composition
- Population distribution
- Education
- Economic status
- Fertility and Mortality
- Migration
- Disability
- Elderly
- Livestock
- Housing
- Youth
- Orphanhood

The 2006 Population and Housing census was funded mainly by the Lesotho Government, with some financial assistance from the UNFPA, DFID, DCI, and technical support was provided by EU and UNFPA.

Relationship to head of the household

The question on relationship to the head of the household was included in the 2006 Population and Housing Census questionnaire. Furthermore, information on heads of the household was filtered out as all persons whose relationship was coded “head” and who were 10 years and above. Heads aged 10 to 14 years were included such that, with this era of HIV/AIDS, the impact should be reflected, as a significant number of children who become heads of the households are observed.

Therefore, figures showing all characteristics of the households as well as characteristics of the household heads are obtained in Tables 1.1 through 1.18. These Tables were distributed by age, sex, urban and rural residence, ecological zones, district, education, marital status, and literacy status of the household heads. Furthermore, these Tables provide information on household possession, household size, number of economically active members in the household, total population living in households as well as the number of household member aged less than 10 years.

Age and sex distribution

Lesotho Population and Housing Census collected data on age where the age of the respondents was recorded in completed years. The month and year of birth was also collected as to confirm the indicated age. Where the respondent did not exactly know his or her age, the national calendar of events was used to estimate the age. Information on sex was also collected where the respondent had to indicate the sex of each member of the household.

The 2006 census came up with the total de jure population in Lesotho of 1,876,633; females represented a higher number of 963,835, while males constituted 912,798. Tables on age and sex structure are from Table 1.3 through 1.3b, and they display information on Population Size, distribution of population by age, sex, ecological zones, urban and rural residence as well as district.

Household size and composition

A household, during the 2006 census, was defined as a one person or a group of persons who live together and have common catering arrangements, whether or not they are related by blood or marriage. People living in the same dwelling but having separate living and eating arrangements were regarded as different households. A household is also a smallest unit for decision making for most economic and social aspects such as education, health, labour and others. A distinction was made during this census between a “Private” and “Institutional” household. The latter included people who were staying at: the Hotels, Correctional services, Convents, Boarding schools, Circumcision schools and others.

Three types of questionnaires were used to determine the household size and composition, namely: Household questionnaire, Institutional and Cattle Post questionnaires were used for the 2006 census. The household questionnaire was used to collect information on the following members of the households;

- a) Usual residents and visitors who were not usual members of the household, but spent the night preceding the census in the household.
- b) Usual members who normally live there but had spent the census night elsewhere were excluded with the assumption that they would be counted at the place where they spent the census night. However those who were temporarily absent during census night (e.g. on night duty) were counted in their usual households.
- c) Those who were absent from their usual households for more than six months, but within the country, were not treated as usual members of the households. Members of the households who were continuously absent outside the country for more than three years were excluded from their usual households. This allows analysis of either de jure (usual residents) or de facto (those who were present at the time of the enumeration) population.

The Institution Questionnaires was used to collect information from the Institutions like the Hotels, boarding schools, Correctional Services, Circumcision schools etc. It was a Questionnaire capturing information on age, sex and marital status.

The 2006 Population and Housing census reported the total number of households at 422,371, and the housing unit is referred to as a house, an apartment, a mobile home, a group of rooms, or single room occupied.

Population distribution

The distribution of national populations is important for present and future national development planning and policy formulation, especially in matters relating to settlement patterns and their changes over time. Therefore, the government has to know the total number of people residing in the country including their geographical location.

Questions asked during the 2006 census, in relation to the population distribution, included the total number of people by residential status that is by district, urban and rural residence and by ecological zones.

According to the 2006 Population and Housing census, the Population distribution refers to the patterns of settlement and dispersal of the population within a country or other areas (Haupt A. and Kane T., 1998). The methods for measuring the characteristics of population distribution vary and include the use of absolute numbers and population densities analyzed by geographical subdivisions of the country. Lesotho has a total land area of 30,355 square kilometers with stable population density estimated at 61 persons per square kilometer,(2006 Population and Housing Census, Vol.III Population Dynamics)

The extent to which people either concentrate or disperse in a given geographical location is measured by population density. Technically, the term “population density” refers to the number of people per square kilometer of a given land area [either total or arable]. Therefore in simple terms, it refers to the number of people within a well defined jurisdiction, measured in relation to the size of the area that they occupy.

Table 2.6: De Jure Population in Households by Age, Sex and Marital Status

Sex/Age	Marital Status							
	Total	Never married	Monogamously Married	Polygamously Married	Living together	Separated	Divorced	Widowed
Both Sexes

Education

The analysis on education during the 2006 population and housing census captured pre-coded responses for all persons aged 2 years and above by school attendance categories. The categories included never attended, still attending and left school. In as far as education is concerned; people were asked to mention the highest level of education completed. The literacy card was provided for those whose highest level of education was primary to test for literacy; whether they know how to read and write.

The total of school going population from 2 to 24 years was 552.89, while 143,252, was for those who never attended school. According to education standard in Lesotho, official primary school going age bracket is 6 to 12 years, secondary education (that is, from form A up to form E) is 13 to 17 years and 18 to 24 is for post secondary school level. Education tables are from Tables 3.1 to 3.7.

Table 3.1: Population 2 - 24 years by Single years, Urban/Rural Residence, School attendance and Sex

Economic characteristics

The questions asked on economic characteristics of the population, during the 2006 Lesotho Population and Housing Census included both the current and usual employment status of the population. If not working, the respondent was asked if he/she was job seeking and the period of time spend on this activity, and to also state the last type of work done. As for those who were working, they were asked the name of their employers, and were classified as: Government, Parastatal, Private, RSA and Other. Other questions for the employed population included: the type of sector they were working for, for example, Agriculture, Fishing, Mining, Manufacturing, Construction, Hotels and Restaurants, Transport etc. All these questions were important in order to estimate unemployment rate.

Inclusive also were questions on the location of employment, and that was mainly urban and rural areas. In the past the majority of unskilled Basotho men were absorbed by the RSA mines, with the high retrenchment of these types of workers, it was found necessary to ask the number that was currently working in these mines, and to capture those who had worked in the past ten years.

Economically active population/Labour force

The two terms are synonymous economic concepts which are used to identify all persons within a specified age group (10 years and over according to the 2006 Lesotho's population and housing census inquiry on people's economic activity status) who supply (i.e. employed population) as well as those who are willing to supply (the unemployed job seekers) their labour for the production of marketable goods and services during the period under reference which according to the 2006 census was a week preceding the date of enumeration. It is important to note that the 2006 census inquiry on population's economic activity status focused mainly on peoples' current rather than their usual economic activity **(Pitiyage Wilson, 1975)**.

Employed population

Following from the above operational definition of the labour force applicable for the 2006 population and housing census of Lesotho, the employed population therefore comprised of all persons above the age of ten years who during the reference week either worked for pay or profit, or had a job but were not currently at work for various reasons, or were unpaid family workers who assisted in the operation of either a farm or a family business usually run by the household head for at least a third of the normal working hours given the reference period duration.

Unemployed population

Unemployed population in the context of the 2006 population and housing census, labour force comprised all persons above the age of ten years who, during the reference period, were not working and were actively seeking job, having declared their availability and willingness to work for pay or profit if a job would be available. This category includes all persons who were currently either temporarily or indefinitely laid off from work.

Occupation

Occupation refers to the type of work done in a job by the person employed or the type of work done previously (if the person is currently unemployed) irrespective of the industry or the employment status. The type of work done is described by the main tasks and duties of the work, see International Standards Classification of Occupations (ISCO).

Industry

The term refers to the kind of production or activity of the establishment or similar unit in which the jobs of the economically active person was located during the reference period, see the International Standard Industrial Classification of all economic activities (ISIC) fourth edition. It describes what the establishment does, not what the individual does when working for that establishment, for example a person may work as a security guard in a department store, an accountant at a hotel or bus driver who drives passengers to the aircraft at an airport. This definition also applied in the 2006 Population and Housing Census.

Fertility

The 2006 census collected fertility data for all females aged between 12 and 49 years. However, the analysis on fertility was limited to the conventional age range for fertility analysis of 15 to 49.

Data on live births in the 12 months before the census were collected through two questions. The first question entailed the total number of live births a woman had in the 12 months before the census and the second question entailed the month and year of the last live birth. However, during the analysis, it was observed that the number of births derived from the question on the total number of live births in the last 12 months before the census seemed unreasonably high. The estimation of current fertility is therefore based on births in the 12 months before the census derived from the question on the month and year of the last live birth.

The total number of children ever born is derived from questions on the number of sons and daughters living with the mother at the time of the census; the number of sons and daughters alive but not living with the mother at the time of the census; and the number of sons and daughters who have died.

Mortality

The 2006 Population and Household Census asked questions on household heads or any adult member who was knowledgeable about household information to report on deaths that occurred among the members of the household 12 months prior to Census undertaking. Tables 5.22 to 5.30 show the distribution of occurrence of these deaths by background characteristics (district, urban/rural residence and ecological zone) and demographic characteristics (age and sex).

Information was also collected on survival of biological parents for every member within the household. The tables have focused mainly on survival of parents for Lesotho citizens only. Tables 5.25a to 5.29 show the distribution of population of the living and deceased parents (mother and father).

Collected also was information on survival status of first spouse. The survival status was obtained from persons who ever married. As observed under tables on survival of parents, the tables on survival status of first spouse focus on Lesotho citizens only. Tables 5.39 to 5.39a show the distribution of ever-married Lesotho citizens. The members from which the survival status of first spouse is obtained, is labeled total and this is shown simultaneously against columns of survival of first spouse. Then for total population and background locations (urban-rural residence and district) the distribution of survival status of first spouse is shown by five-year age groups and sex of responding ever married persons.

Internal Migration

The 2006 Population and Housing Census adopted the definition of migration as defined by Shryock and Siegel (1976: p349), that is, it is a geographic or spatial mobility involving a change of usual place of residence between clearly defined geographic units whereas internal migration is a movement from one place to another within the country. A person was defined as an internal migrant if he/she had been away from home for a period of more than six months. Questions on internal migration covered movements of people within the country by place of birth, place of enumeration and the duration of stay in a place of enumeration.

Disability

According to the Convention on the rights of persons with disability, disability is defined as: “Persons with disability include those who have long term physical, mental, intellectual or sensory impairments which in interaction with various barriers may hinder their full and effective participation in society on an equal basis with others”. There were four questions on disability during the 2006 Population and Housing census. If the respondent was disabled, he/she had to state the type of disability, duration and the cause.

Table 7.1: Total Population with and without Disability by Sex and Age Group

Sex/Age Group	Disability

Elderly population

The tables on elderly population were for all persons aged 60 years and above. Variables of interest were: age, sex, literacy and educational attainment, employment status, geographic location, household headship, relationship to head of household, marital status, economically active and disability.

Housing and household amenities

Land is both a national and social asset to be utilized for the benefit of the people. Three types of land titles that are recognized in Lesotho are Form C which is allocated by a land committee; title deeds and leasehold. The 2006 census included households who occupied land without any title. The Land Act 1979 requires that all land rights are converted to leaseholds at the point of transfer or any other transaction. A housing unit is a house, an apartment, a mobile home, a group of rooms, or a single room occupied, or intended for occupancy, as separate quarters (US Census Bureau, October 2001). Data on the type of housing units and the number of rooms provide information on the available housing accommodation at the time of census. Such details are essential for planning future housing needs.

YOUTH

There is no widely accepted definition of youth in Lesotho as different Organizations use different definitions. For example, the National Youth Policy UNAIDS and WHO define Youth as population 10-24 years of age. The United Nations uses the age range 15-25 years, while the Ministry of Gender, Youth and Recreation use the age range of 10-35. The 2006 census adopted the United Nations definition of the age group 15-24 in order to allow for the international comparison.

ORPHANHOOD

An orphan refers to a child who has lost one or both parents through death. The orphans are classified into maternal orphan (a child who has lost a mother), paternal orphan (a child who has lost a father) and double orphan who is a child that has lost both parents.

The 2006 Census of Population and Housing estimated the total number of children who are not orphaned as 555,947 of which 279,336 were males while 276,611 were females. However, orphaned children (paternal, maternal and double orphans combined) were estimated at 221,406 and 110,729 were males and 110,874 were females.

Generally, mortality seems to be affecting more males than females. About 63.0 percent of the children are paternal orphans, 16.6 percent are maternal orphans while 20.4 are double orphans. The information on orphanhood is presented in Tables 12.0 to Table 12.11(d).
