### **Documentation**

Note:785351.1 Upgrade Companion 11g Release 2

#### Introduction

The Best Practices section is not a replacement for the *Oracle Database Upgrade Guide* but rather a companion document that emphasizes and elaborates on database upgrade recommendations and requirements. The Best Practices are derived by Oracle technical staff and offer an accumulation of real-world knowledge and experience obtained while working with our customers.

#### <sup>=</sup> Usage

The Best Practices tab is organized by the following major steps in the Upgrade Methodology:

- . Upgrade Planning: Important information related to planning the DB configuration, and testing
- Prepare and Preserve: Information related to preserving and preparing the source environment for the Oracle Database 11g Upgrade
- . Upgrade: Final reminders and information required for the actual upgrade
- Post Upgrade: Testing and analysis which should be performed after upgrading your test and production databases to Oracle Database 11g

ORACLE

### **Documentation**

Note:785351.1 Upgrade Companion 11g Release 2

#### Behavior Changes

This section documents important changes in behavior between Oracle9i Release 2 (9.2)/Oracle Database 10g and Oracle Database 11g. This section focuses on behavior changes that require a DBA to make an informed decision to minimize the risks that may be introduced by the changes. This section does not describe all changed behavior or new features in Oracle Database 11g. For a complete list of all new features introduced in Oracle Database 11g, see the Oracle Database New Features Guide 11g

This page is an accumulation of real-world knowledge and experience obtained from Support and Development engineers and working with Oracle customers on different upgrade scenarios. Pay careful attention to these Behavior Changes to avoid the most common issues when upgrading from Oracle9i Release 2/Oracle Database 10g to Oracle Database 11g.

#### Forum: Database - Upgrade

Discuss all aspects of database upgrade from planning and testing through execution and troubleshooting. Also, information about helpful tools and utilities, documentation, and other information to make your database upgrade easier, faster, and less risky.

Beginning with release 10.2.0.3, Oracle releases Recommended Patches for Oracle Database. For an introduction to Recommended Patches, see Note:756388.1.

ORACLE

# Patch Set Update (PSU) Installation

- Install PSUs as well
  - Note:854428.1: Introduction to Database Patch Set Updates
  - Database PSUs include:
    - Fixes for critical issues that may affect a large number of customers and that are already proven in the field
    - Critical Patch Update (CPU) fixes
  - Database PSUs do not include:
    - Changes that require re-certification
    - Fixes that require configuration changes
  - Typically 50-100 new bug fixes cumulative
  - Guaranteed to be RAC rolling installable
  - Will be released 4x per year such as CPUs on the same schedule
    - Platforms:
       Solaris SPARC64, Linux x86 and x86-64, HP-UX PA-RISC, HP Itanium, IBM AIX

## **Upgrade Information / Alerts**

 Note:880782.1 Support Status and Alerts for Oracle 11g Release 2 (11.1.0.X)

#### Patch Sets

This section gives a summary of the patch sets available for Oracle 11g Release 2. Note that the BASE release of Oracle 11g Release 2 is 11.2.0.1.

# **Upgrade Information / Alerts**

• Note 880707.1 Known Issues specific to the 11.2.0.1 Base Release

#### 11.2 Alerts / Issues

This section lists alerts and important issues relevant to 11.2.

#### General Alerts / Issues

Note:1066229.1*	OERI(25027)/OERI(4097)/OERI(4000) in plugged datafile after CREATE CONTROLFILE in 11g
	Corrupt blocks in 11.2 in table with unique key. OERI[kdBlkCheckError] by block check

#### Latest Critical Patch Update

For information about Critical Patch Updates see the Oracle Technology Network page here: Critical Patch Updates and Security Alerts

Document	Summary
Note:467881.1	Critical Patch Update Advisory (Apr 2010)
Note:1060989.1	Critical Patch Update for Database Products (Apr 2010)

#### **Current Recommended Patches**

For information about Recommended Patches for the RDBMS see Note:756671.1.

#### Patch Set Updates

Document	Description	Rolling RAC	Patch Download
Note:9352237	11.2.0.1.1 Patch Set	Yes	Patch:9352237

**ORACLE** 

# **Upgrade Information / Alerts**

Note 880707.1 Known Issues specific to the 11.2.0.1 Base Release

#### Notable fixes included in 11.2

This section lists fixes / enhancements in 11.2 which may cause a notable change in behaviour.

#### <u>Issues introduced in 11.2</u>

This section lists bugs **introduced** in 11.2 (if any). As this is a base release only notable regressions in behaviour are listed.

Note 1078406.1*	Corrupt blocks in 11.2 in table with unique key. OERI[kdBlkCheckError] by block check			
<u>9382101</u>	Unnecessary trigger traces "Dumping Sorted Master Trigger List"			
<u>9217629</u>	Dump / wrong results with fix for bug 6467270 and encryption			
<u>9052506</u>	Null-Aware Anti Join (NAAJ) is not used on DML			

#### 11.2.0.1 Availability

The following 11.2.0.1 Base Releases are currently available:

IRM AIY 51 Bacod Systoms (64 bit)

HPUX Itanium 64bit
11.2.0.1 » Available

ORACLE

PURPOSE

-----

This bulletin is produced to provide a central source for all the primary installation settings for the various mainstream unix platforms, e.g. IBM AIX, HP-UX, Sun Solaris, T

Careful comparison of the Installation Guide and the applicable release note for an OS/Oracle version has been done to ensure that this bulletin provides the most comple

Keeping the OS kernel current helps stabilize the system. Production systems should never run an out dated OS kernel version. As a best practice, Oracle recommends

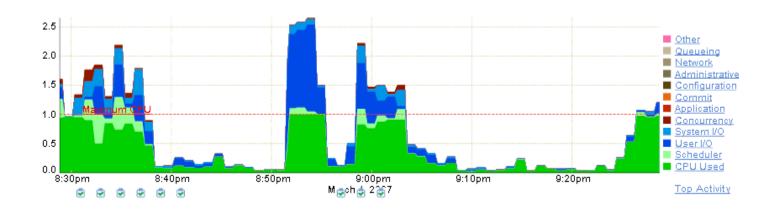

NOTE: Pre-compilers requirements are no longer addressed in this note, for a single source note

that addresses Pre-compiler/Compiler requirements, please refer to:

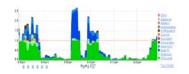

Note 43208.1 Certified Compilers

**ORACLE** 

Preserve performance statistics

### **Performance Statistics**

- Preserve performance statistics
  - Get accurate performance statistics
    - Comparison: before ↔ after
    - Time specific queries and batches
  - Test upgrade of the database
    - Functional tests
    - Performance tests with real life loads!!!
      - Real Application Testing
        - SQL Performance Analyzer
        - Database Replay

### **Performance Statistics**

- Collecting sufficient performance data prior to the upgrade is of vital importance
  - Sufficient means: Starting at least 4 weeks before the upgrade
  - Gather accurate performance statistics
  - In Oracle 8*i*/9*i*:
    - Use STATSPACK
      - Export the PERFSTAT user right before the upgrade
      - Note:466350.1 STATSPACK before/after upgrade
  - In Oracle 10*g*/11*g*:
    - Use AWR
      - Snapshots every 30-60 minutes retention: >30 days
      - Export the AWR with DBMS\_SWRF\_INTERNAL.AWR\_EXTRACT
      - Use ADR DIFF reports to compare before & after upgrade performance:

DBMS\_WORKLOAD\_REPOSITORY.AWR\_DIFF\_REPORT\_HTML

**ORACLE** 

Pre-upgrade Sanity operations

# **Invalid Objects**

Always check for INVALID objects:

```
SQL> SELECT UNIQUE object_name, object_type, owner FROM dba_objects WHERE status='INVALID';
```

- There should be no invalid objects in SYS and SYSTEM user schema
  - Recompile invalid objects with utlrp.sql
  - Compare invalid objects from before and after the upgrade
    - Beginning with 11.1.0.7 the comparison has been automated
    - Find invalid objects in registry\$sys\_inv\_objs and registry\$nonsys\_inv\_objs
    - Compare before-after: utluiobj.sql
    - The view dba\_invalid\_objs contains a list of invalid objects after the upgrade

ORACLE

# Recycle bin

• If upgrading from 10g or 11g, purge the recycle bin before the upgrade.

SQL> purge DBA\_RECYCLEBIN;

- Always run the pre-upgrade script:
  - Upgrade to Oracle Database 11.2: utlu112i.sql

# **Pre-Upgrade Check**

• Run utlu112i.sql in your current environment

```
09-21-2009 22:33:20
Oracle Database 11.2 Pre-Upgrade Information Tool
Database:
--> name:
             ORCL
--> version: 10.2.0.3.0
--> compatible: 10.2.0.3.0
--> blocksize:
--> platform: Linux IA (32-bit)
--> timezone file: V4
[..]
WARNING: --> "java_pool_size" needs to be increased to at least 64 MB
[..]
Miscellaneous Warnings
WARNING: --> Database is using a timezone file older than version 11.
.... After the release migration, it is recommended that DBMS_DST package
.... be used to upgrade the 10.2.0.3.0 database timezone version
.... to the latest version which comes with the new release.
```

**ORACLE** 

# **Pre-Upgrade Check**

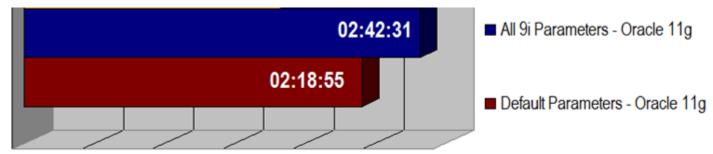

- Get the latest version of utlu1 nmi.sql
  - Download it
  - Note:884522.1

Coming From Version	Upgrade Target Version
9.2.0 (9.2.0.8 and beyond), 10.1.0, 10.2.0, 11.1.0	11gR2 - utlu112i.sql
9.2.0 (9.2.0.4 and beyond), 10.1.0,10.2.0	11gR1- utlu111i.sql
8.1.7, 9.0.1, 9.2.0 (9.2.0.4 and beyond), 10.1.0	10gR2 - utlu102i.sql

- Remove "old" parameters, underscores and events from your init.ora/spfile
  - Examples:

### **Remove Old Parameters**

Example: customer workload

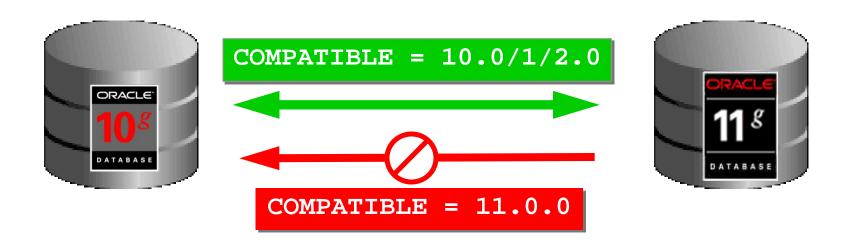

- Conclusion:
  - It is recommended to remove relics from previous releases and start with the 11g defaults

• Leave COMPATIBLE at the original value for a week before changing to 11.2.

### **Parameter COMPATIBLE**

- COMPATIBLE has to be at least 10.1.0 for an 11g database
- No way back once ≥11.1.0 has been enabled
  - Supported release downgrade to 10.1.0.5, ≥10.2.0.2, ≥11.1.0.6
  - No alter database reset compatibility command anymore

### Parameter COMPATIBLE

- DBUA raises COMPATIBLE only for 9i databases
- To enable new features after the upgrade:

```
• 11.1: SQL> alter system set compatible='11.1.0' scope=spfile;
```

```
• 11.2: SQL> alter system set compatible='11.2.0' scope=spfile;
```

- Afterwards: restart the database
  - New features will be enabled
  - Datafile headers will be adjusted
  - Redologfiles will be adjusted during first access

ORACLE

Test your fallback strategy!

# Fallback Strategy

- In any case: Take a backup!!!
- Then decide:
  - If anything unforeseen happens and you'll have to step back, will you be allowed to lose data?
     (i.e. changes done to the data in the system after the upgrade): YES or NO?
    - If YES: restore a backup, flashback (since 10g)
    - If NO: export/import, downgrade

ORACLE

#### Fallback Strategy: catdwgrd.sql

- Downgrade with catdwgrd.sgl
  - Note:443890.1
    - Downgrade to the release you've upgraded from
      - 10.1.0.5
      - 10.2.0.2/3/4
      - 11.1.0.6/7
    - Only possible if COMPATIBLE hasn't been raised!!!
      - Please note:

A downgrade will only be possible to the release you've upgraded from - so if a patch set has been applied always apply it before the upgrade starts - otherwise you'll only be able to downgrade to the release you've patched

ORACLE

#### Fallback Strategy: catdwgrd.sql

- Downgrade with catdwgrd.sql to 10g
  - Task in 11g environment:

```
SQL> SPOOL /tmp/downgrade.log
SQL> STARTUP DOWNGRADE
SQL> @catdwgrd.sql
SQL> SPOOL OFF
```

Switch to your pre-upgrade 10g environment:

```
SQL> STARTUP UPGRADE

SQL> SPOOL /tmp/reload.log

SQL> @catrelod.sql

-- The catrelod.sql script reloads the appropriate version of

-- all of the database components in the downgraded database.

SQL> SPOOL OFF
```

 Please note: additional steps are required if EM repository resides in the database please see chapter 6 Downgrading a Database in the Oracle 11g Upgrade Guide

**ORACLE** 

#### **Best Practice #9**

After the upgrade ...

#### **Post Upgrade**

 Create system statistics during a regular workload period otherwise non-appropriate values for the CBO will be used:

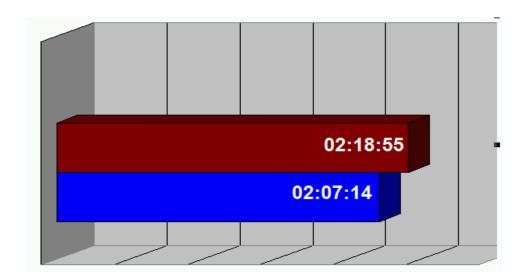

```
SQL> exec DBMS_STATS.GATHER_SYSTEM_STATS('start');
... - gather statistics while running a typical workload
SQL> exec DBMS_STATS.GATHER_SYSTEM_STATS('stop');
```

```
SQL> select pname NAME, pval1 VALUE, pval2 INFO
     from aux stats$;
NAME
                          VALUE INFO
                                COMPLETED
STATUS
DSTART
                                04-03-2009 12:30
                                05-03-2009 12:30
DSTOP
FLAGS
                        1392.39
CPUSPEEDNW
IOSEEKTIM
                          8.405
                     255945.605
IOTFRSPEED
```

ORACLE

#### **Post Upgrade**

- Example: customer OLTP workload
  - Runtime without system statistics: 2:19h
  - Runtime with system statistics: 2:07h
    - => 9% faster

#### **Post Upgrade**

- Create fixed table statistics
  - Directly after catupgrd.sql has been completed
    - This will speed up processing for recompilation with utlrp.sql

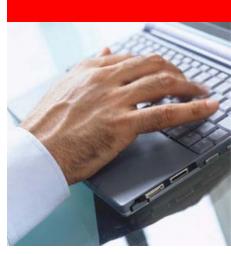

```
SQL> exec DBMS_STATS.GATHER_FIXED_OBJECTS_STATS;
```

- Create fixed table statistics again after a week with regular production workload
- This task should be done only a few times per year

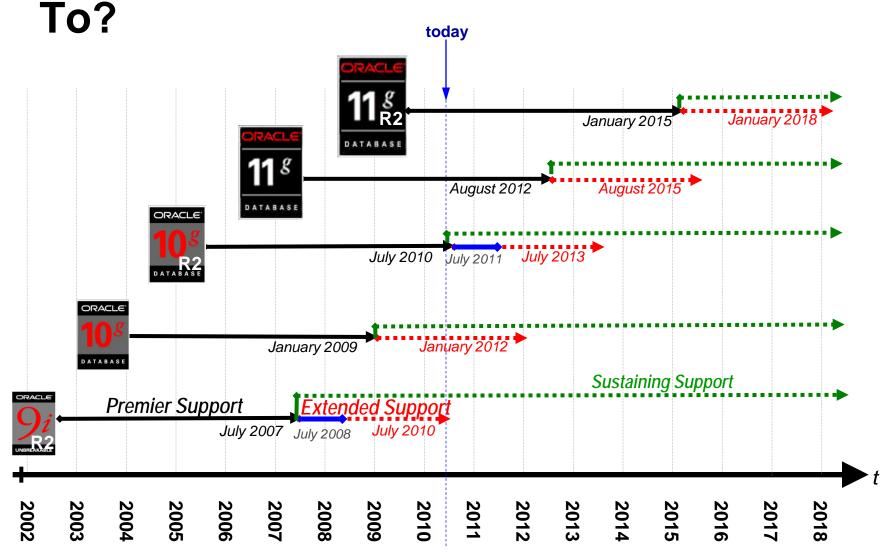

ORACLE

## **Agenda**

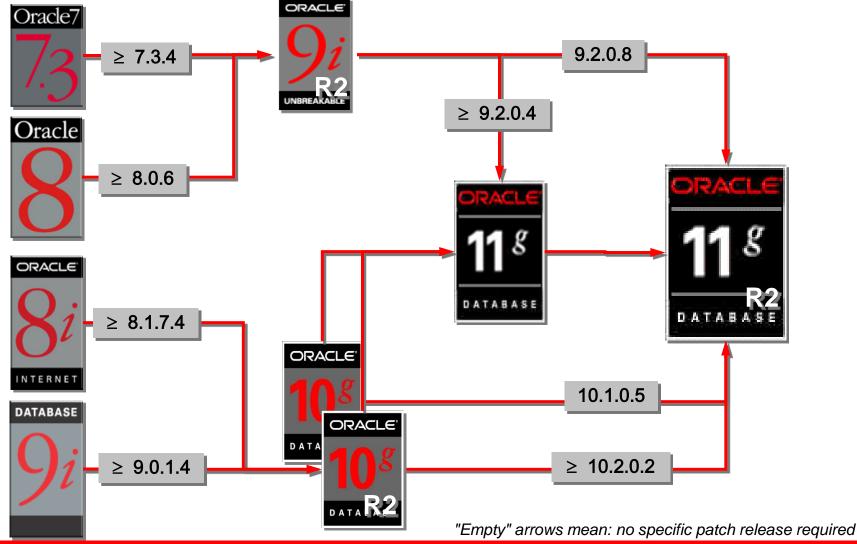

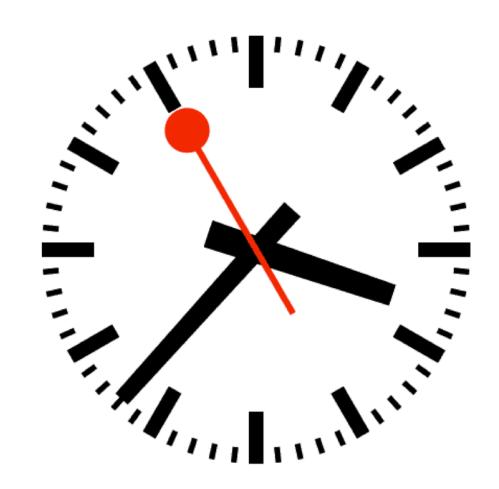

## FAQ: Which Version Should I Upgrade

## **Upgrade to Oracle Database 11g Release 2**

#### FAQ: How long will the upgrade take?

#### **Upgrade Length**

- How long will the upgrade take to complete?
  - Independent of:
    - Size of the database
    - Used datatypes
  - Dependent mainly on:
    - The number of installed components and options
    - Valid and non-stale data dictionary statistics
    - Number of synonyms they'll get recompiled (upgrade from 9i)
    - Number of objects in XDB
    - At a very low rate, if COMPATIBLE is increased:
      - Number of datafiles
      - Size of redo logs

ORACLE

#### **Example: Database Upgrade Time**

- Usually between ~30 and ~90 minutes
  - Dependent mainly on installed options and components
  - \*Actual times may vary...

Component	HH:MM:SS						
Oracle Server	00:16:17						
JServer JAVA Virtual Machine	00:05:19						
Oracle Workspace Manager	00:01:01						
Oracle Enterprise Manager	00:10:13						
Oracle XDK	00:00:48						
Oracle Text	00:00:58						
Oracle XML Database	00:04:09						
Oracle Database Java Packages	00:00:33						
Oracle Multimedia	00:07:43						
Oracle Expression Filter	00:00:18						
Oracle Rule Manager	00:00:12						
Gathering Statistics	00:04:53						
Total Upgrade Time: 00:52:31							

**ORACLE** 

#### **Upgrade Length**

- Speed up your upgrade performance by:
  - Truncating the auditing table SYS.AUD\$

```
SQL> truncate SYS.AUD$;
```

- Note: If you must preserve auditing records, move them temporarily to a user tablespace before truncating. Then move the records back after the upgrade.
- Creating dictionary statistics right before the upgrade
  - Oracle 9i:

```
SQL> exec DBMS_STATS.GATHER_SCHEMA_STATS
    ('SYS', options => 'GATHER', estimate_percent =>
    DBMS_STATS.AUTO_SAMPLE_SIZE, method_opt => 'FOR
    ALL COLUMNS SIZE AUTO', cascade => TRUE);
```

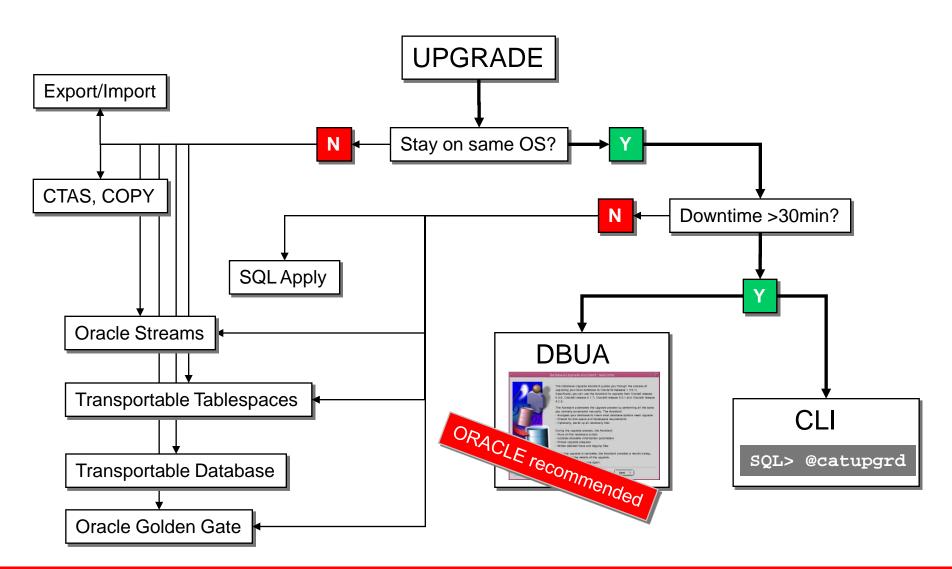

• Oracle 10*g*/11*g*:

```
SQL> exec DBMS_STATS.GATHER_DICTIONARY_STATS;
```

Switching off archiving, if business rules allow

**ORACLE** 

#### **FAQ: Which Method Should I Use?**

#### When to Choose the DBUA

- Can afford 30 90 minutes average downtime
- Operating system remains the same
- GUI is preferred over manual command line interface
  - Automatically performs useful pre-upgrade checks
  - Less error-prone / less manual effort
- Existing database is at least 9.2.0.8
- Note: especially useful for RAC databases
- Consideration:
  - Source and target Oracle Homes must be on the same system
  - Cannot be re-run if an error is encountered mid-upgrade

ORACLE

#### When to Choose Command-Line

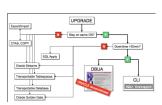

SQL> spool upgrade.log
SQL> @catupgrd.sql

- Can afford 30-90 minutes average downtime
- Manual command-line interface is preferred over GUI
- Existing database is at least 9.2.0.8
- Migrating to a new hardware platform with same OS
- Consideration
  - Cannot upgrade to a system with a different operating system architecture
  - More manual steps required
  - Potential for errors due to typos, missed details

ORACLE

#### When to Choose an Alternative Method

- Alternative methods include
  - Original exp/imp or Data Pump expdp/impdp)
  - Oracle Streams or Oracle Golden Gate
  - Data Guard (SQL Apply)
  - Transportable Tablespaces, Tansportable Database
  - Moving data via CREATE TABLE AS SELECT or other techniques
- Alternative methods must be used when
  - Moving to a different operating system platform (32- and 64-bit versions of an OS are considered "the same platform" in this case
  - Upgrading from a release older than 9.2.0.8
- Alternative methods may be a good option when
  - Minimal downtime (<30 minutes) required or desired</li>
  - Re-organizing database storage or schemas

ORACLE

## FAQ: Is anybody really live on 11.2?
