OUR MISSION

MWE Sales is the industry's one-stop shop for compact equipment aftermarket parts, including skid steer loader tires, wheels, rubber tracks and undercarriage parts. **The company's mission is to offer the highest quality compact equipment parts at a fair price, reducing customers' operating cost per hour.**

As you will see throughout this catalog MWE Sales LLC offers one of the most extensive line of products available today. Our product line includes:

- Rubber tracks
- Steel tracks
- Hybrid tracks
- Over-the-tire tracks
- Construction tires
- Undercarriage parts

We are continuously seeking new or updated products that add value for our customers. As new products come into our line up they may not be included in the current edition of our catalog, so it is always best to contact one of our sales consultants to inquire about a needed item.

Product Listing (Pg 36-37)

Product information, specifications and photography in this brochure were as accurate as possible at time of printing. Product photographs may contain some product features or aspects that may have changed since the photographs were taken. Since we continually strive to improve our products, actual products may differ. Prices and specifications are subject to change without notice. All capacities are approximate and dimensions are nominal.

COMPANY HISTORY

MWE Sales has deep roots in the compact equipment industry. It opened its doors in 2007 as Central Ohio Takeuchi in Columbus, Ohio. As an equipment distributor, the company began to form relationships with aftermarket parts and service providers across the United States to meet the needs of its customers. Over the years, the company's leadership recognized a need in the market for higher quality aftermarket rubber tracks and undercarriage options.

In 2009, the company became a Gehl compact equipment dealer and changed its name to Midwest Equipment Sales, LLC (MWE Sales). Taking on the Gehl line allowed MWE Sales to broaden and deepen its relationships with aftermarket providers, as well as expand its own footprint in the aftermarket industry as a rubber track supplier. Later that same year, MWE Sales launched www.tracksandtires.com, a site designed to educate customers on the best aftermarket track and tire options available.

At this point, MWE Sales ramped up its staff to accommodate the influx of new business. Industry experts were brought in to train new and existing employees on all aspects of rubber tracks and undercarriages to ensure that MWE Sales' employees had the in-depth knowledge needed to completely assist and educate customers. The company also expanded its aftermarket business at this time to include the sale of construction tires. Solideal became MWE Sales' preferred vendor for pneumatic and solid tires.

In 2011, MWE Sales changed directions – it gave up its rights as a compact equipment dealer and began to focus solely on growing its track, tire and undercarriage aftermarket business. At this point, the company actively sought out quality manufacturing companies to partner with in order to best serve our customers' aftermarket parts needs. It became a Titan Tire dealer, as well as a Bridgestone distributor in the United States.

When Camoplast purchased Solideal, MWE Sales added the well-known, popular Camoplast brand to its line of rubber tracks. In 2012, MWE Sales became the largest Camoplast construction track distributor.

To accommodate this growth, MWE Sales expanded its staff, as well as opened a new location in the Seattle, Washington area. This second location enabled MWE Sales to better service customers across the United States. Shipping time decreased from a 3-4 day wait on parts to a 1-2 day turnaround for 80 percent of its customers. The company also purchased a new corporate building, which expanded its Ohio capacity to over 60,000 sq. ft. of warehouse space. The new space was fully equipped to handle all areas of company business, including a full studio marketing department and training facility.

Today, MWE Sales leads the industry with exceptional quality control measures, setting itself apart from the competition and exceeding customers' expectations.

Contact Us

MWE Sales is headquartered at 808 Rhoads Ave., Columbus, OH 43205. Office Hours are Monday-Friday, 8AM to 8PM EST. MWE Sales is closed on Saturdays and Sundays.

camoplast
solideal

Camoplast Solideal provides an excellent line of skid steer tires designed to meet the challenges of the rigorous jobs being asked of them. From the use of advanced rubber compounds that resist chunking, to the extra thick sidewalls that help machine stabilization, these tires are built to last.

Xtra Wall

The Solideal Xtra Wall has been designed with enhanced features such as heavy-duty sidewall and hauler steps to maximize value and performance. Stepped tread design maximizes tread cleanout in off-road conditions for improved traction and a built-in rim protector to save on damage from impact.

Lifemaster

The Solideal Lifemaster features a unique, non-directional, extra-deep tread that provides an ideal tire solution for heavy-duty, mixed-surface operations. Massive tread depth for improved tread life and resistance to punctures. With 2-3 times more rubber than standard tires, the Lifemaster provides superior side impact resistance.

XD44

The Solideal Hauler XD44 is a severe-duty skid steer tire with an extra deep L5 tread to provide ultimate durability in the most extreme hard surface applications. Lasts up to 3x longer than standard tires in the most extreme abrasive and abusive applications. 80% lug-to-void ratio increased on-road performance and longevity and maximum protection against tread impacts for fewer flat tires.

Gripper

The Solideal Gripper is an entry level skid steer tire offering good durability and traction for off-road applications. Premium rubber compounds provide good chunk and tear resistance. Classic R 4 pattern for lighter-duty use in standard applications with good traction on soft soils. Lug-to-void of 35-40%.

Skid Dawg

With a unique patented multi surface tread design, the Skid Dawg is a perfect fit for machines used in multiple applications. The bi-directional center tread is constructed for hard surface running and combines with the self-cleaning, deep treaded side lugs to enable this tire to do it all. Built on a heavy duty carcass with an extra thick sidewall, the Skid Dawg provides good value with the benefits that each tread alone can't.

LOWEST OPERATING COST SOLUTION

All product must meet our rigorous standards before we inventory them.

MWE only sells products with the highest ratings for durability, reliability, and design.

GALAXY

The Galaxy line of skid steer tires was engineered with every application possible in mind. With the largest offering of any company, there is a tire for every budget, application and machine available. From the muddiest low traction environment to the most abusive environment, this extensive line up will have something to keep every machine moving.

XD2010

The Galaxy XD2010 has a solid center for long wear on hard surfaces. The open deep shoulders are designed for traction off road, and are made with a highly abrasion resistant tread compound. The tire features a heavy sidewall and rim guard. The casing was designed to hold a flatter tread when inflated. This tire is widely used as an OE tire for skid steers.

Beefy Baby

The Beefy Baby II is the standard bearer of all bias R-4 skid steer tires. They are proving to be one of the most durable, versatile and lowest cost per hour R-4 tires in the market. The Beefy Baby II features wear resistant compound, superior tread design, super sidewall and rim shield protector, making it one of the "beefiest" and best performing R-4 design skid steer tire.

Beefy Baby III

The Galaxy Beefy Baby III has an advanced new design with almost 10% more tread than previous versions. It has a flatter tread profile due to the tread overlap and the amount of rubber in the center of the tread. With the increase in traction and the self-cleaning lugs this tire is made to perform for a longer life than traditional R4 treaded tires.

Muddy Buddy

The Galaxy super deep tread Muddy Buddy offers the deepest R4 tread lug in the business. With 55% more lug depth this tire offers incredible performance on soft soil and applications where extra traction is needed.

Marathoner

The Galaxy Marathoner delivers the highest traction for a skid steer tire on the market. The Marathoner was specifically designed to provide outstanding wear and offer great pulling power. The Marathoner features the Galaxy "Mud Breakers" which are designed to eject mud from the tread area.

Hulk

The Galaxy Hulk has a unique tread pattern that allows it to be used for severe duty and standard applications. The lug design also allows for self-cleaning in dirt applications. With a minimum tread depth of 44/32", this tire is made to perform where other pneumatic tires fail.

Mighty Mow

The Mighty Mow is engineered to provide superior flotation characteristics resulting in a turf friendly tire that will not damage grass or roots. The Mighty Mow works exceptionally well on skid steers with mounted mowers for lawns, parks, golf courses, sports grounds and cemeteries.

Trac Star ND

The Galaxy Trac Star ND has a special tread design enabling the tire to be used in multiple applications. The deep tread pattern gives exceptional wearability on hard surfaces like rock and concrete. Its rounded shoulders and large footprint allow the tire to be used on soft ground and turf.

PRIMEX

Bossman Grip Steel II

The Primex Bossman Grip Steel II is a severe service tire that is steel reinforced for superior tread stability and greater penetration resistance. The extra deep tread provides a long tread life and the center block resists "skid" wear.

Have Questions?

Call 1-877-336-6825

MWE Solid Tires Are The Toughest On The Market.

**Premium Quality Tires
At An Affordable Price.**

MWE SALES

MWE solid skid steer tires utilize premium engineered natural and synthetic rubber compounds to provide an optimum life in the most demanding environments. Our tires are built to outperform a similar air filled tire by 3 to 5 times. We have a solid tire option available for most machines and applications.

MWE SALES EXCLUSIVE

MWE HD Tread

Engineered to handle the most severe applications, the MWE HD no flat solid skid steer tire combines the benefits of a hard surface tire with enough tread to give plenty of traction. With 2 1/2" deep massive tread lugs and the space and design for self-cleaning, this is an ideal tire for those looking for a new solution where other tires don't stand up to the job. Its extraordinary design provides the longest life in a solid tire available.

MWE R-4 Tread

MWE no flat solid skid steer tires are engineered with the highest quality natural and synthetic rubber compounds to provide the best durability and long life. With deep tread, mud breakers and built in cushion ride, these tires are manufactured to outperform the life of a similar pneumatic tire by 3 to 5 times with the performance that is needed in the most demanding environments. The narrow face of this tire allows for more ground pressure resulting in better traction.

MWE R-4 Tread Wide

The MWE wide tread solid tire is built at the same width as a standard air filled tire. The additional width provides a smoother ride when running on hard surfaces and offers some distribution of weight to help with flotation. Also available in a large pilot hole to fit newer style skid steer hubs, and can be used on front wheels of four wheel drive backhoes.

MWE Smooth

MWE no flat smooth solid skid steer tires are engineered with the same quality rubber compounds used in our treaded tires. With a smooth tread these are ideal for use on hard surface and scrap applications where muddy traction is not needed. This massive solid rubber tire will provide long wear and reduced downtime.

HEAVY DUTY WHEELS

These universal wheels will fit most machines and are factory painted to match your machine's OEM wheel color. These off road wheels are produced to ETRTO*, TRA** and JATMA*** standards. These heavy duty wheels are designed for all applications and are available in a wide variety of sizes. Not sure what you need? Give us a call! We'll be happy to guide you in the right direction.

**AVAILABLE IN 6 HOLE AND 8 HOLE
as well as multiple offset sizes.**

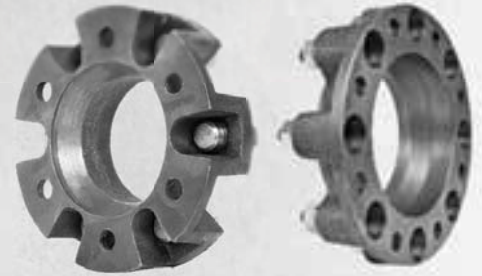

* **ETRTO** The European Tyre and Rim Technical Organisation
** **TRA** The Tire and Rim Association
*** **JATMA** The Japan Automobile Tyre Manufacturers Association

ORIGINAL EQUIPMENT MANUFACTURED WHEELS

WHEEL SPACERS AVAILABLE

AVAILABLE IN 6 HOLE AND 8 HOLE

Camoplast Solideal constantly strives to create innovative construction tires to meet the demands of the consumer. As one of the world's largest manufacturers, you will find that each backhoe tire was designed with a specific application in mind. The engineering behind these tires arose from research and testing in real life applications, to bring about an advanced product that produces the best results for the operator. From the tread design to the rubber compounds used to make the tires, Camoplast Solideal backhoe tires perform at a high level in any application.

SL

The Solideal SL R4 is a heavy-duty backhoe tire providing extreme durability. It has massive tread blocks to keep you going on the job site and prevent downtime.

- Improved side impact resistance and stability
- Increased tread life and puncture resistance
- Enhanced tread life and traction

SLA

The Solideal SLA R4 is a great choice for off-road use in combination with roading between job sites. Your efficiency is enhanced with SLA's improved traction and ride quality.

- Continuous Low-Void Lug Design at Center of Tread
- Steep Multi-Angle Stepped Tread
- Heavy-Duty Carcass

Loadmaster

The Solideal Loadmaster is a premium non-directional construction tire ideal for operation on mixed and hard surfaces. With proven performance and longevity, the Loadmaster provides enhanced value.

- Engineered Non-Directional Tread Pattern
- Heavy-Duty Carcass
- Reinforced Tapered Tread

GALAXY

BACKHOE

Alliance Tire Group offers the most extensive line up of backhoe tires available. With multiple tread designs to handle any application, you will find a perfect tire for your needs. From driving a machine on hard surfaces, to use in off road applications, there is a tire available that will perform perfectly for most applications.

Constellation

The Constellation R-4 with a special tread compound and robust lug design ensure long wearability. The tread design gives more traction and better breaking power as well as high mileage in on-the-road service. The larger pads in the center of the tread provide better puncture resistance than standard R-4 tread designs.

EZ Rider

Like its name suggests, the EZ Rider provides a smooth ride for the operator. The self-cleaning mud breakers maintain the strong pulling power of the tire in the sloppiest conditions. Rim guard and super side-wall protection ensure rim and sidewall integrity for every application. These characteristics have made the EZ Rider the R-4 tire of choice for some of the top original equipment manufacturers in the world.

Hulk

The Hulk has a unique tread pattern that allows it to operate in severe applications while providing superior self cleaning characteristics. The Hulk has a minimum tread depth of 44/32nds, and a ratio of 68% lug to 32% void. Due to these features, the Hulk will provide extraordinary hours of service and reduce downtime due to cuts and punctures.

Marathoner

The Galaxy Marathoner delivers the highest traction for a backhoe tire in the market. The Marathoner was specifically designed to provide outstanding wear and offer great pulling power. The Marathoner features the Galaxy "Mud Breakers" which are designed to eject mud from the tread area. This combination has made the Marathoner one of the best backhoe tires in its class and the perfect tire for original equipment and aftermarket usage.

Camoplast Solideal is an original equipment provider for many telehandler manufacturers. With a lineup built for value and reliability, these tires will provide long life and perform well in most environments. With self-cleaning tread lugs and a robust sidewall the engineering behind these tires will improve traction and provide stability.

SL G2

The Solideal SL G2 is a heavy-duty off-road construction tire that provides excellent traction and wear resistance. This means that even in the toughest applications, SL G2 has the versatility to get the job done.

- Heavy-duty Carcass
- Deep Hauler Stepped Tread Design
- Reduced Crowning for Flatter Tread Profile

TH2

The Solideal TH2 is a high-quality telehandler tire offering good durability and reliability on off-road surfaces.

- Optimized Tread Pattern
- Deep Tread Depth
- Robust Carcass

FOAM FILL PROGRAM

MWE's telehandler foam fill exchange program is a simple, cost-effective solution for saving money and down time when new tires are needed. We have wheels for most telehandlers and can turn around your order in a matter of a few days.

Here's how it works:

1. Order a complete set of four qualifying exchange wheel/tire assemblies.
2. MWE will ship these wheel/tire assemblies to you within 48 hours.
3. Once you receive them and get the assemblies mounted to your machine, you'll ship your old wheel/tire assemblies back to MWE.
4. MWE will remove the tire and foam fill from your old wheel assemblies, and the wheel will be inspected and used in a future exchange.
5. MWE recycles both the tire and the foam fill.

Our program 12-ply tires offer a more durable side wall and are less susceptible to damage from rough terrain.

Tire Sizes available range from 13.00-24, 14.00-24, 17.5-25 and 15.5-25.

Visit Us On The Web
www.MWESALES.com

GALAXY

TELEHANDLER

Alliance Tire Group offers several types of telehandler tires. Each tire is designed and engineered to perform to the specifications required by these versatile machines and the range of applications that they are used in.

Constellation

The Constellation R-4 with a special tread compound and robust lug design ensure long wearability. The tread design gives more traction and better breaking power as well as high mileage in on-the-road service. The larger pads in the center of the tread provide better puncture resistance than standard R-4 tread designs.

Giraffe

The Galaxy Giraffe XLW features an all new, multi-purpose design making it the optimal telehandler tire. The Giraffe XLW is engineered using a neutral casing design which minimizes stress on the tire and thereby increases reliability and tire life. The wide, flat tread design provides exceptional stability. The Giraffe XLW's solid center tread blocks deliver excellent wear and ride comfort characteristics, while its aggressive, open shoulder lugs provide excellent off-road traction.

PRIMEX

G3000

The Primex G3000 is specifically designed to meet the requirements that telehandlers demand. Engineered with a reinforced carcass, the G3000 provides improved stability for telehandlers applications. The G3000 aggressive open shoulder lugs deliver exceptional traction in off-road applications.

This represents only some of the offerings available. We understand that many customers have specific applications that a general tire may not work best for.

If you have a specific need for a different option please contact a sales consultant so that we may recommend a tire that will fit your specific needs. With the range of tires available, we know that we can outfit your machine with the option that is best for you.

The Technology Behind

NO-WAVE CABLE

- Exclusively designed and manufactured for rubber tracks by Bridgestone
- High strength for maximum durability
- Ultra flexible for power efficiency
- Compression and stretch resistant
- Anti-corrosive braiding technology

PRO-EDGE

Optimum Side Edge Protection Technology utilizes forged iron and stress reducing winged embed design.

- Unique sidewall profile
- Specially formulated anti-cut/anti-gouge, abrasion resistant rubber compound
- Patented anti-edge cut profile

RUBBER COMPOUNDS

Several unique rubber compounds are utilized in Bridgestone rubber tracks to enhance performance in each functional area.

Single-Cure Technology

Reduces potential failure at joints like other brands

Trackguard Iron Core

Improves rolling path life by 100%

Heavy-Duty Carcass

Prevents carcass puncture and tearing

High-Tensile Steel Cables

Are highly durable and helps prevent corrosion

AdvanceX Rubber Compound

Reduces overall track wear

SPIRAL TECHNOLOGY

Featuring Bridgestone's No-Wave Cable Technology which provides even tension distribution and accurate circumferential length; effectively eliminating pitch variance.

POLAR TREAD

Designed For Those Who Live In The Snow!

- Improved traction for better operating efficiency.
- Shorter stopping distance on snow covered surfaces.
- Smooth turning ability with less slippage.
- Best solution for snow removal applications.
- Can be used all year round.

STAGGERED BLOCK

Reinforced Roller Path. Bridgestone Reliability!

- High strength for maximum durability
- Ultra flexible for power efficiency
- Compression and stretch resistant
- Anti-corrosive braiding technology

VORTECH

Great General Purpose Track. Bridgestone Quality

- Rounded profile tread for smoother ride and less intrusive footprint on soft surfaces.
- No-Wave Spiral Cable Technology
- Pro-Edge Side Protection
- Advanced Rubber Compounds

DARE TO COMPARE

MWE supplies only the best products to our customers. We are very selective in who we partner with. We don't choose our product by price but by quality. Every product line we carry has been subject to our rigorous quality check and meets or exceeds our "Gold Standard."

Below is a comparative cross section sample we did on a Camoplast track vs. the leading track from our competitors. The results speak for themselves.

The Gold Standard in Tracks, Tires and Parts

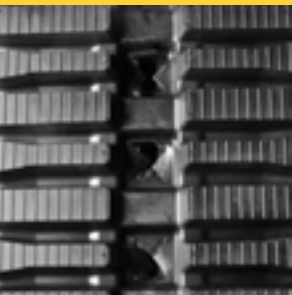

Have Questions?

Call 1-877-336-6825

MWE rubber tracks utilize premium engineered natural and synthetic rubber compounds to provide an optimum life in the most demanding environments. Our tracks are built to outperform similar priced tracks. We have a rubber track option available for most machines and applications.

Multi-Bar

The MWE multi-bar tread design provides great traction while giving the operator the smoothest ride of any track on the market. With tight multiple rubber lug bars this track is one of the thickest, long wearing tracks available. It provides a less intrusive footprint when traveling across turf and is great for snow removal on paved surfaces with minimal vibration.

Warranty: 15 Months – 1000 Hours

Block Pattern

The MWE staggered block tread design is a large lug, multi-purpose track that provides plenty of rubber for heavy wear and standard applications. The most common tread design found on original equipment machines, this track is built to handle any job while providing good traction.

Warranty: 15 Months – 1000 Hours

C-Pattern

The MWE C pattern matches the original equipment pattern found on many machines. With multiple biting edges this track provides excellent traction in sloppy, muddy conditions and functions well in soft dirt applications where extra bite is needed.

Warranty: 15 Months – 1000 Hours

V-Pattern

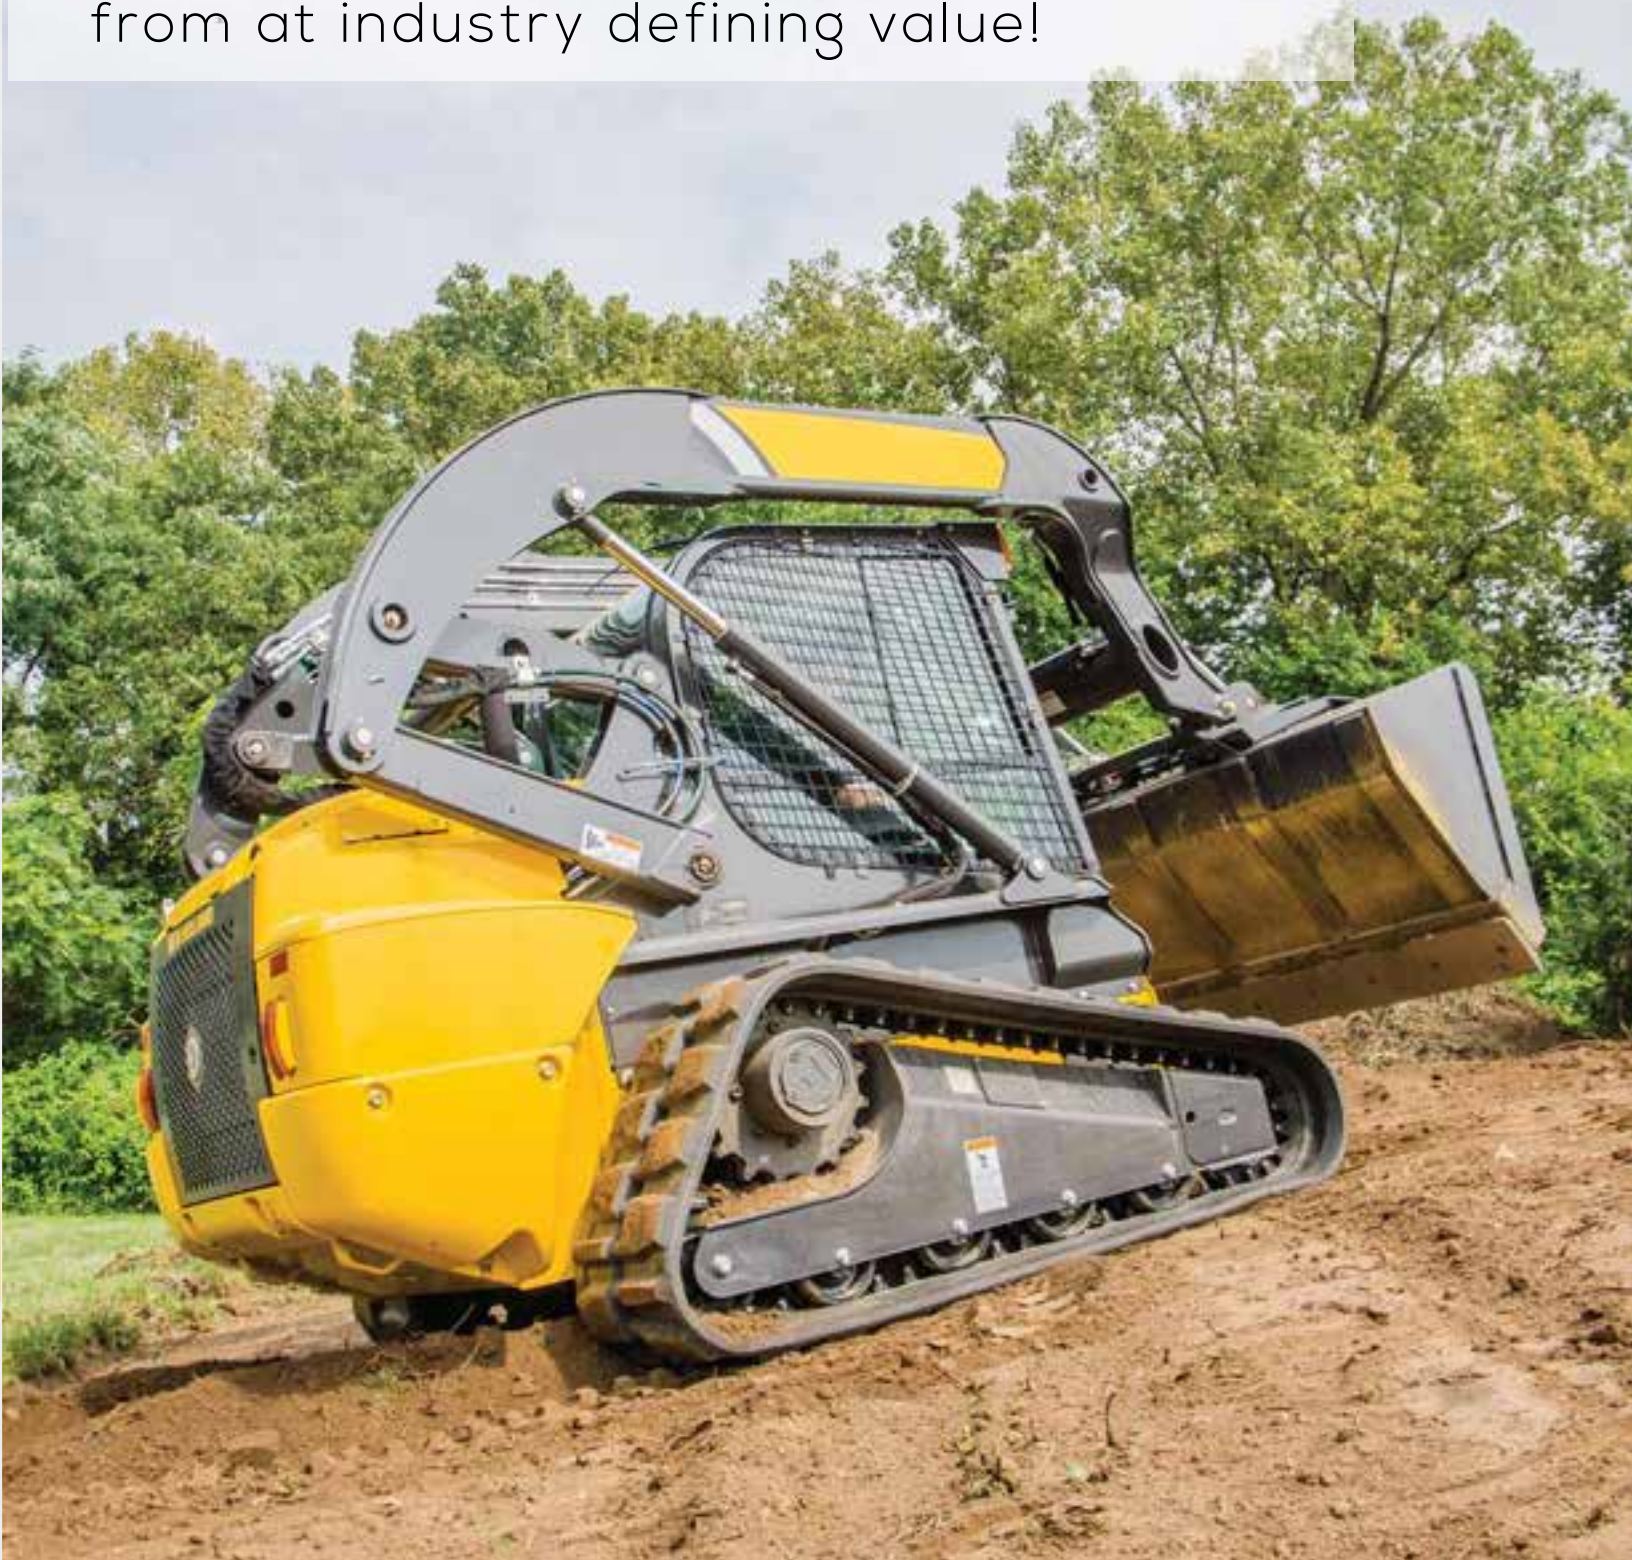

The MWE V pattern rubber track is modeled after the agricultural tracks currently being used on larger tractors. The deep "V" tread provides outstanding traction in muddy and soft dirt applications while providing a stable, comfortable ride and excellent clean out.

Warranty: 15 Months – 1000 Hours

Lowest Cost Solution Track

CTL UNDERCARRIAGE

We are committed to providing our customers with the "Highest Quality" products available in the industry. Rigid quality and application standards for MWE Sales products result in components that provide outstanding field performance and customer value. We provide you with product that is the best value and quality for your equipment.

Our products are "Performance Proven" and provide one of the best values for earthmoving contractors, mining, waste management, and logging operations. Our components are the preferred choice by professionals when repairing and maintaining "Off Road" earth moving equipment.

ROLLERS

Our rollers are designed and manufactured to provide outstanding service under extreme working conditions.

SPROCKETS

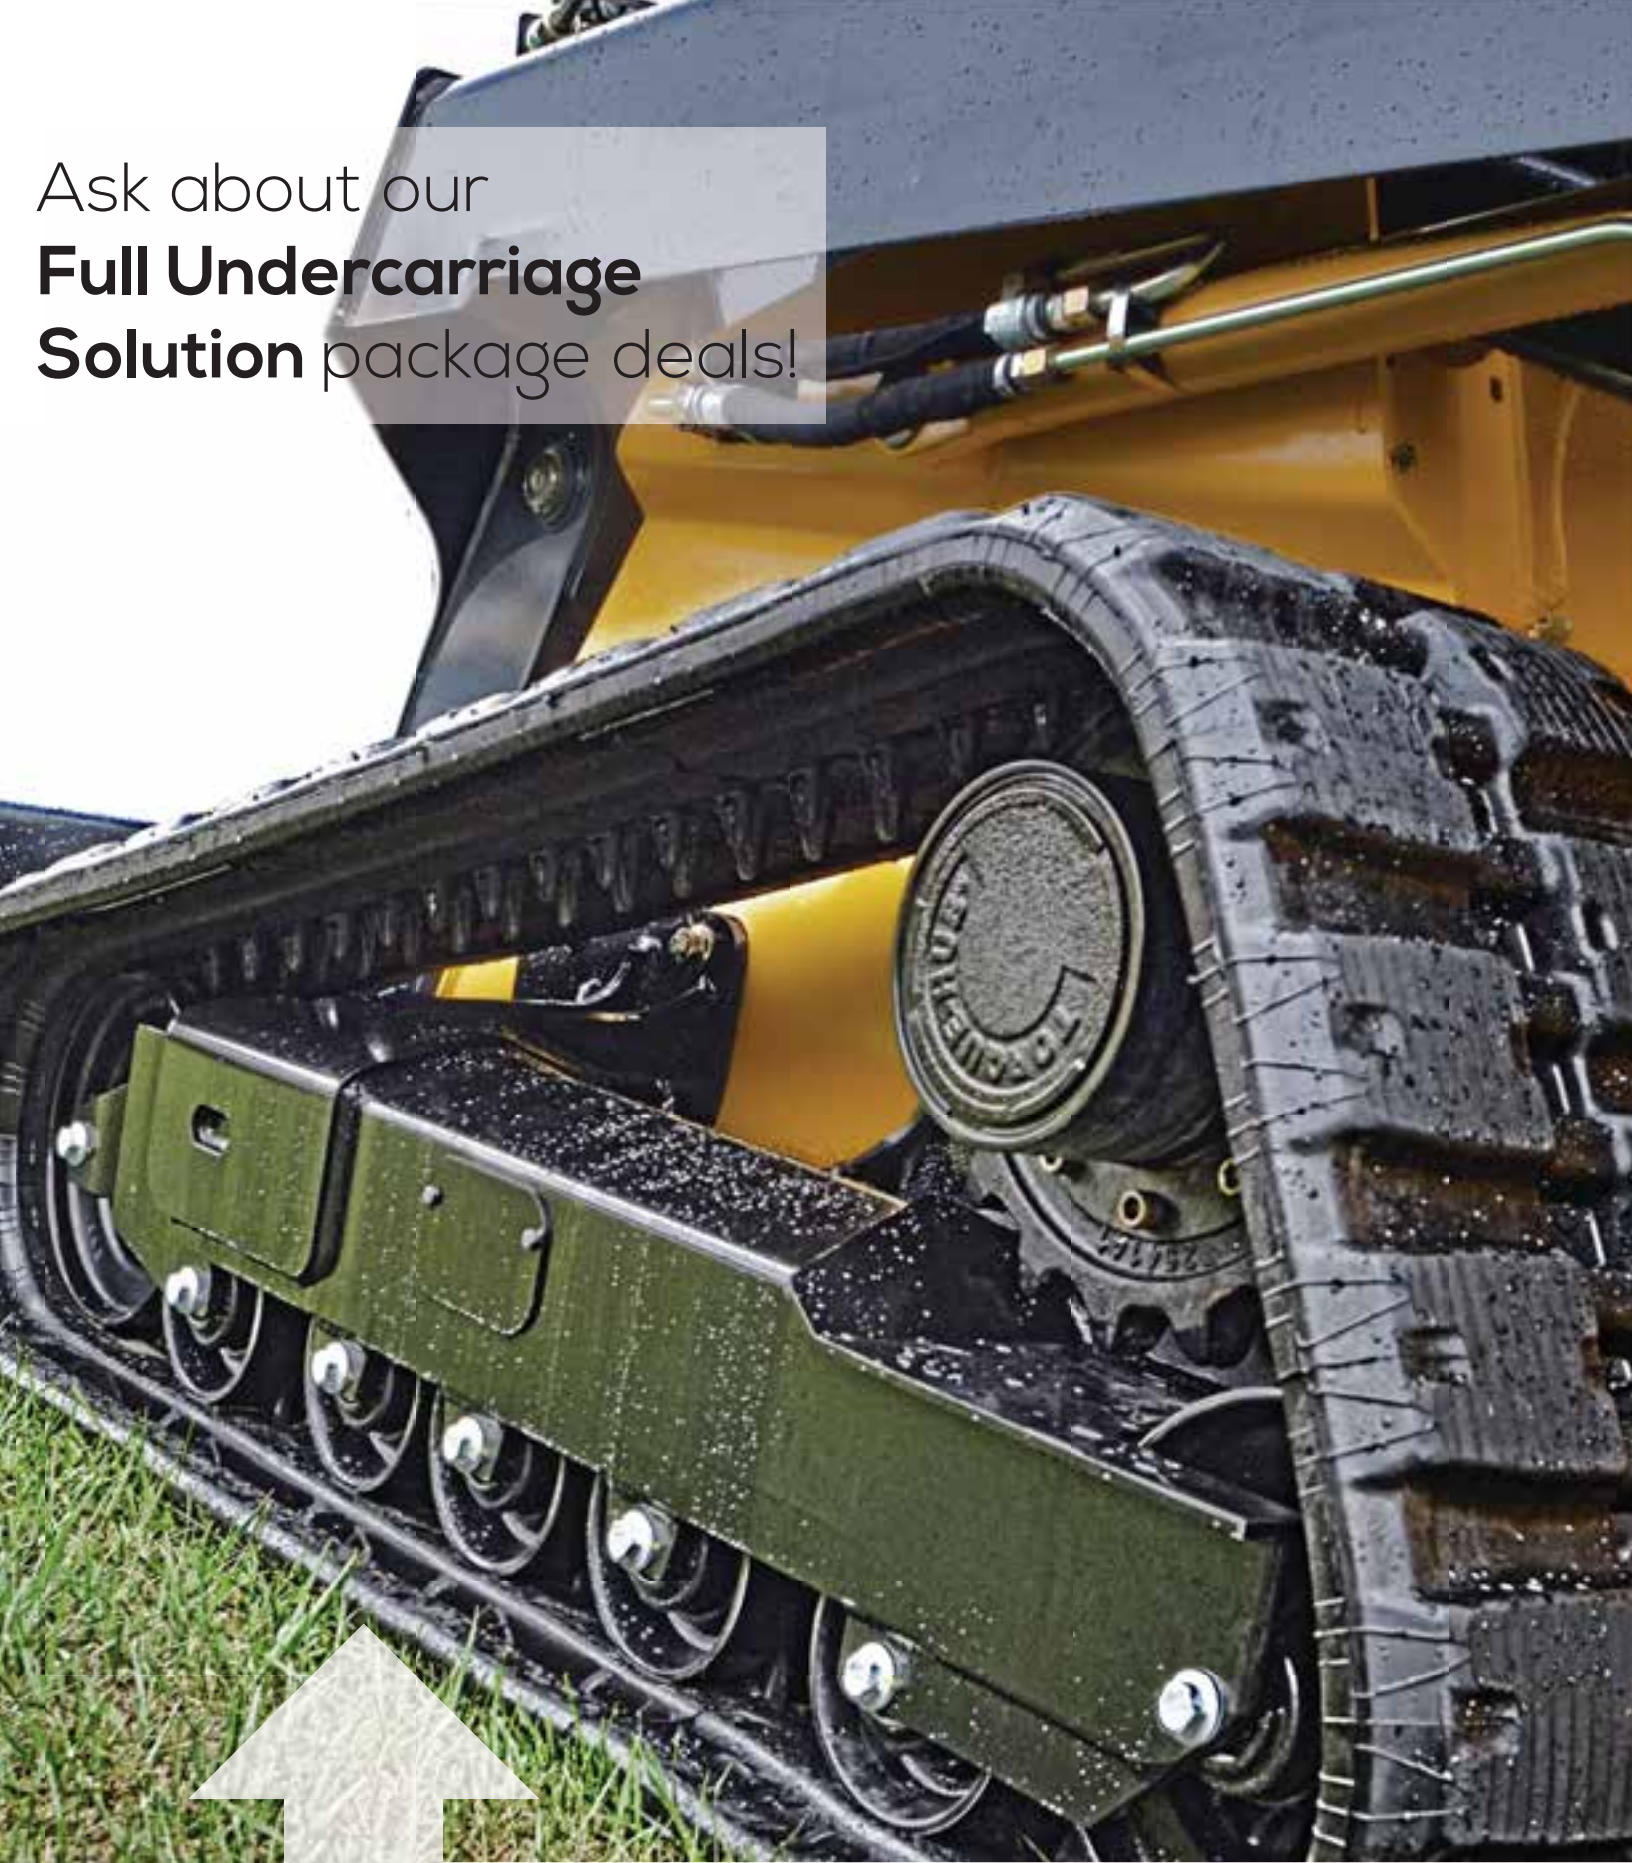

Our sprockets are manufactured from the highest quality materials and are designed to provide long service life and unmatched reliability under the most severe operating conditions.

IDLERS

MWE offers a wide range of front and rear idler assemblies. Our idlers are "Maintenance Free," utilizing quality seal groups that provide excellent lubricating oil retention.

MINI-EXCAVATOR TRACK PADS

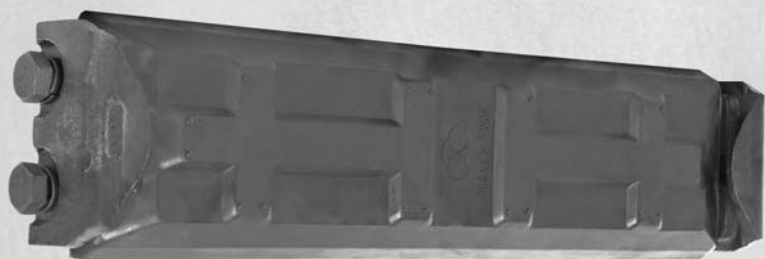

Bolt-On Rubber Track Pads

The rubber MWE bolt-on track pad is easily attached to the steel grouser shoe by having threaded studs located at the back of the rubber pad, bolted through predrilled holes in the grouser shoe. Most machines already have these holes predrilled by the manufacturer, or the holes may always be drilled into the shoes for later use.

Works With Most Machines

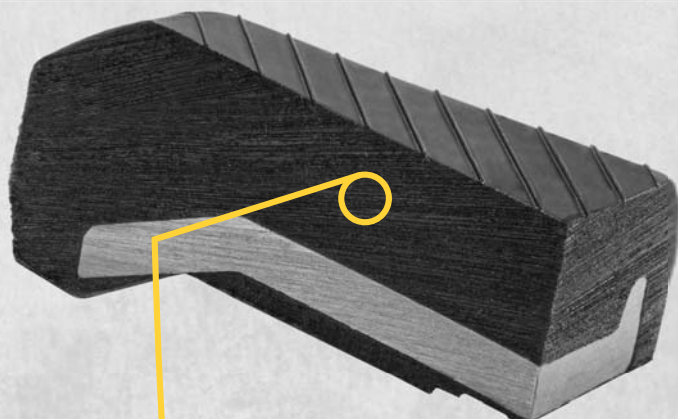

With Little Or No Modifications

Clip-On Rubber Track Pads

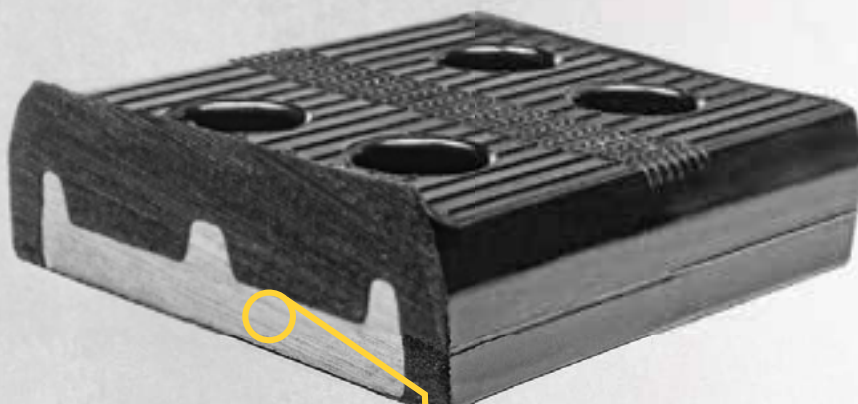

MWE clip-on rubber track pads attach quickly to the steel grouser shoe. Our track pad attaches directly to the steel shoe with a bolt-on bracket at each end. This permits you to easily access the bolt and nut to either add, replace, or remove the rubber track pad. These pads work with most machines with little or no modifications.

ANATOMY OF A TRACK PAD

Rubber Compound

The rubber is bonded to the grouser utilizing the latest industrial bonding methods. The rubber is manufactured to be long-lasting and durable.

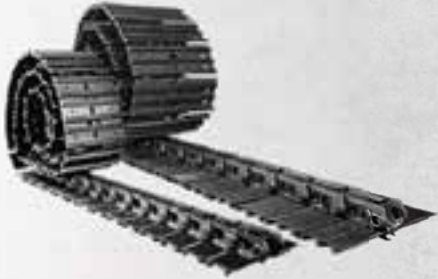

Grouser

Made from high strength steel. The grouser is heat treated and forged for maximum durability and strength.

Steel Tracks

Our steel chain links, made from a high-precision forging process, are heat treated to ensure durable core tenacity and hardness in the areas exposed to extreme wear. The heat-treatment reduces the chipping caused by violent knocks or strikes.

Pins and bushings are specifically designed with different configurations depending on use both in regards to mechanical engineering and heat treatment. All steel chain parts are high-precision machined. Additional hardness through heat treating is done on all critical wear areas.

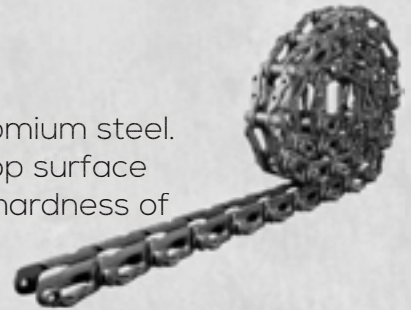

TRACK ASSEMBLY

Complete track groups are built with top quality precision parts. All parts are hardened and tempered to prevent cracking under extreme conditions to keep your machine operational.

TRACK CHAINS

All of our track links are forged from top quality 35Cr and 40Cr carbon chromium steel. The track link body is manufactured to a hardness of HRC33~37 and the top surface of the track links are manufactured with an induction heating process to a hardness of HRC52~56.

The track links are then sent into hardening and tempering treatments to prevent any cracking after quenching. All of our quality steel chain assembly products are certified which ensures durability even in the most rugged terrains.

TRACK SHOES

All of our track shoes are milled into a long profile from top quality manganese boron steel billet (23MnB). The profiles are then precision cut to the required length and both bolt-holes and mud-holes are punched out to accommodate for the required sizes. The shoes are then sent into hardening and tempering to prevent any cracking after quenching.

Hybrid Tracks

Rubber & Steel Meet

To Make The Ultimate Track!

Best of Both Worlds

MWE's hybrid tracks provide you with the strength of steel tracks and the flexibility of rubber. Hybrid track systems deliver excellent traction for any demanding environment. Compared to traditional rubber tracks, hybrid tracks are the most durable, cost effective alternative.

A Versatile Solution!

Each rubber pad is molded to the grouser for a quick and easy change with only a single piece and four (4) bolts. Hybrid tracks are the perfect track system to reduce downtime, eliminate the cost of replacement rubber tracks and perform at a higher level than any conventional rubber tracks available. Our chains will provide you with many years of service without the fear of snapping cords or costly downtime.

The Versatility of Rubber.

The Strength of Steel.

Hybrid Track Pads

Each hybrid track width we have is optimized to enhance your machines performance. Each hybrid track pad comes with all the hardware needed including nuts and bolts.

Installation Is A Breeze!

Easy-On, Easy Off.

High Performance. Low Maintenance.

Camoplast HXD

TRACKGUARD

Prevents infiltration of water, sand and rocks between the rolling path and iron core. Increases rolling path durability by 100%.

RUBBER COMPOUND ADVANCE X

- Long-lasting, low-abrasion rubber tread compounds for greater resistance to cutting and gouging
- Extreme durability
- Maximum chunk and tear resistance

Longest Track Warranty In The Industry Heavy Duty All Purpose Track

Warranty: 30 Months – 2500 Hours
(Non Pro-Rated)

MINI-EXCAVATOR

SOLUTIONS

MWE Sales mini-excavator tracks are typically modeled after the original equipment in regards to tread design and guide systems. With the multitude of undercarriage guide systems available on the large range of these machines, we pride ourselves on providing the best fitment available for your specific model.

Although there are options that will fit several of the rollers and guide paths, we strive to provide our customers with the options that were designed specifically for the undercarriage system to provide a smoother, quieter, longer wearing track.

With improvements to the roller path, steel lugs, and internal steel cables, these tracks are a great value. A smoother ride creates less vibration which results in reduced operator fatigue, but also reduces wear to the machine. In addition, a smoother ride lowers the disturbance to surfaces being traveled on.

Our internal steel cables go through a three step coating process to ensure bonding to the rubber and are machine wound and tensioned for even placement in the tracks.

MWE Stocks The Most Common Tread Patterns You Depend On!

Guide Path Systems

Although both work for many machines example B is the best option for dual flange rollers that rely on travelling directly on the roller path, to reduce vibration and wear performance.

MINI-EXCAVATOR UNDERCARRIAGE

Our products are "Performance Proven" and provide one of the best values for earthmoving contractors, mining, waste management, and logging operations. Our components are the preferred choice by professionals when repairing and maintaining "Off Road" earthmoving equipment.

From product quality, selection, development, distribution, and product support you can depend on Midwest Equipment. We provide you with product that is the best value and quality for your equipment.

ROLLERS

SPROCKETS

IDLERS

We carry high strength drive sprockets for crawler, dozer and excavator machines. Our sprockets are manufactured from the highest quality materials and are designed to provide long service life and unmatched reliability under the most severe operating conditions.

MWE offers a wide range of front and rear idler assemblies. Our idlers are "Maintenance Free," utilizing quality seal groups that provide excellent lubricating oil retention.

Drive Lug

Optimized drive-lug geometry
for extended wear and superior performance.

**MADE IN
THE USA****HEAVY-DUTY CARCASS**

- Optimized ply for better track alignment and rigidity
- Endless single cure technology for even ply and cable placement
- Heavy-duty synthetic fiber provides rock-puncture resistance

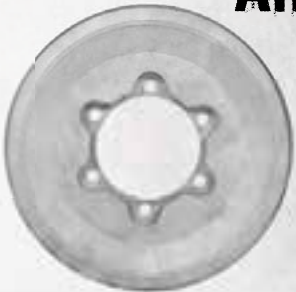

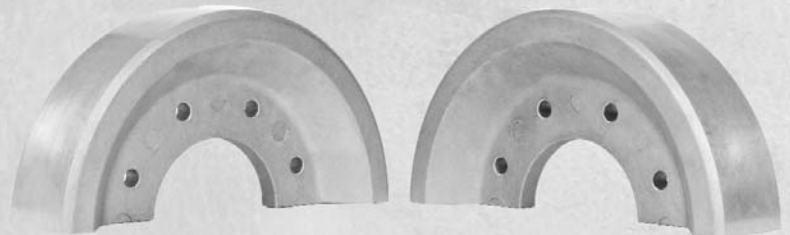

MTL1**MTL2****RUBBER COMPOUND ADVANCEX**

- Long-lasting, low-abrasion rubber
- Greater resistance to cutting and gouging
- Extreme durability
- Maximum chunk and tear resistance

Warranty: 14 Months – 1200 Hours

MTL UNDERCARRIAGE

Rather than replace a product with the same design that will continue to offer a lower performance and life, this undercarriage is made to be virtually care and maintenance free for the life of the machine. Constructed of lightweight aluminum, this undercarriage provides a more rigid, longer wearing solution to the typical rubber replacements.

RUBBER OTT TRACKS

The most innovative solution to turn your skid steer into a compact track loader in minutes! Add traction and floatation to your Skid Steer with the "only" continuous flotation rubber over the tire attachment. Less ground pressure per square inch than a dedicated track machine.

"Over The Tire Tracks" are built from natural rubber compounds. The embedded spring steel is forged to give it maximum strength. The OTT joints are specifically engineered to handle the toughest abuse for many years.

OTT's literally turn your skid steer into a track loader. The deep tread profile allows for unprecedented floatation for a skid steer – OTT's can go across new concrete without any scarring!

TURN YOUR **SKID STEER INTO A TRACK LOADER IN MINUTES!**

STEEL OTT TRACKS

Patented Marbain material
heat-treated up to 52Rc.

Marbain replaceable
linkage. No bushings.

Sidewall is tapered to fit
today's heavy duty tires.

2-3/4"
wide rails

MWE steel over the tire tracks are manufactured utilizing the patented MARBAIN® hardening process. The hardening process creates a product that:

- **provides a hardness without brittleness**
- **has increased impact toughness**
- **allows for higher wear resistance.**

MWE steel OTT's are easy to install and use. Steel OTT's install in about twenty minutes and are adjustable in 1" increments with 5/8" shoulder bolts and no bushing to worry about. Steel OTT's are lighter than cast steel by almost 50%!

The advantages of using steel OTT's include:

- **protection from jagged, sharp stones**
- **better traction with self-cleaning tread**
- **better handling**

Feel Free To Call Us With Questions. We're Here To Help!

Call 1-877-336-6825

As you have probably seen throughout this catalog MWE Sales LLC offers one of the most extensive line of products available today. Our product line includes:

- Rubber tracks
- Steel tracks
- Hybrid tracks
- Over-the-tire tracks
- Construction tires
- Undercarriage parts

We are continuously seeking new or updated products that add value for our customers. As new products come into our line up they may not be included in the current edition of our catalog, so it is always best to contact one of our sales consultants to inquire about a needed item.
