2014 Mathematics

Higher

Finalised Marking Instructions

General Comments

These marking instructions are for use with the 2014 Higher Mathematics Examination.

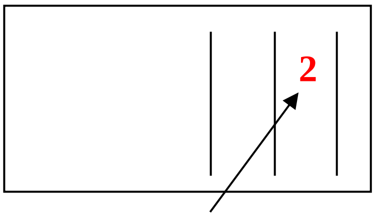
For each question the marking instructions are in two sections, namely **Illustrative Scheme** and **Generic Scheme**. The **Illustrative Scheme** covers methods which are commonly seen throughout the marking. The **Generic Scheme** indicates the rationale for which each mark is awarded. In general markers should use the **Illustrative Scheme** and only use the **Generic Scheme** where a candidate has used a method not covered in the **Illustrative Scheme**.

All markers should apply the following general marking principles throughout their marking:

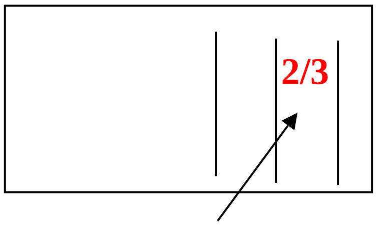
1 Marks must be assigned in accordance with these marking instructions. In principle, marks are awarded for what is correct, rather than deducted for what is wrong.

2 Award one mark for each •. There are **no** half marks.

3 The mark awarded for **each part** of a question should be entered in the **outer** right hand margin, opposite the end of the working concerned. The marks should correspond to those on the question paper and these marking instructions. Only the mark, **as a whole number**, should be written.



Marks in this column
whole numbers only



Do not record marks on
scripts in this manner.

4 Where a candidate has not been awarded any marks for an attempt at a question, or part of a question, 0 should be written in the right hand margin against their answer. It should not be left blank. If absolutely no attempt at a question, or part of a question, has been made, ie a completely empty space, then NR should be written in the outer margin.

5 IT IS ESSENTIAL that every page of a candidate's script should be checked for working. Unless blank, every page which is devoid of a marking symbol should have a tick placed in the bottom right hand margin.

6 Where the solution to part of a question is fragmented and continues later in the script, the marks should be recorded at the end of the solution. This should be indicated with a down arrow (↓), in the margin, at the earlier stages.

7 Working subsequent to an error **must be followed through**, with possible full marks for the subsequent working, provided that the level of difficulty involved is approximately similar. Where, subsequent to an error, the working for a follow through mark has been eased, the follow through mark cannot be awarded.

8 As indicated on the front of the question paper, full credit should only be given where the solution contains appropriate working. Throughout this paper, unless specifically mentioned in the marking instructions, a correct answer with no working receives no credit.

9 Marking Symbols

No comments or words should be written on scripts. Please use the following symbols and those indicated on the welcome letter and from comment 6 on the previous page.

A tick should be used where a piece of working is correct and gains a mark. Markers must check through the whole of a response, ticking the work **only** where a mark is awarded.

At the point where an error occurs, the error should be underlined and a cross used to indicate where a mark has not been awarded. If no mark is lost the error should only be underlined, ie a cross is only used where a mark is not awarded.

A cross-tick should be used to indicate "correct" working where a mark is awarded as a result of **follow through** from an error.

A double cross-tick should be used to indicate correct working which is irrelevant or insufficient to score any marks. This should also be used for working which has been **eased**.

A tilde should be used to indicate a minor error which is not being penalised, eg **bad form**.

This should be used where a candidate is given the **benefit of the doubt**.

A roof should be used to show that something is missing, such as part of a solution or a crucial step in the working.

These will help markers to maintain consistency in their marking and are essential for the later stages of SQA procedures.

The examples below illustrate the use of the marking symbols .

Example 1

$y = x^3 - 6x^2$

$\frac{dy}{dx} = \underline{3x^2 - 12}$

$3x^2 - 12 = 0$

$x = 2$

$y = -16$

$\bullet^1$ $\bullet^2$ $\bullet^3$ $\bullet^4$ $\bullet^5$

Example 2

$A(4,4,0),\ B(2,2,6),\ C(2,2,0)$

$\overrightarrow{AB} = \underline{\mathbf{b}+\mathbf{a}} = \begin{pmatrix}6\\6\\6\end{pmatrix}$ $\bullet^1$

$\overrightarrow{AC} = \begin{pmatrix}6\\6\\0\end{pmatrix}$ $\bullet^2$

Example 3

$3\sin x - 5\cos x$

$k\sin x\cos a - \cos x\sin a$ $\bullet^1$

$k\cos a = 3,\ k\sin a = 5$ $\bullet^2$

Example 4

$$\begin{array}{r|rrrr} 4 & 1 & -5 & 2 & 8 \\ & & 4 & -4 & -8 \\ \hline & 1 & 1 & -2 & 0 \end{array}$$

$\bullet^1$ $\bullet^2$

Since the remainder is 0, $x-4$ must be a factor. $\bullet^3$

$(x^2 - x - 2)$ $\bullet^4$

$(x-4)(x+1)(x-2)$ $\bullet^5$

$x = 4$ or $x = -1$ or $x = 2$ $\bullet^6$

10 In general, as a consequence of an error perceived to be trivial, casual or insignificant, eg $6 \times 6 = 12$, candidates lose the opportunity of gaining a mark. But note example 4 in comment 9 and the second example in comment 11.

11 Where a transcription error (paper to script or within script) occurs, the candidate should be penalised, eg

	$x^2 + 5x + 7 = 9x + 4$ ✓
This is a transcription error and so the mark is not awarded.	$x - 4x + 3 = 0$ ✗
Eased as no longer a solution of a quadratic equation.	$x = 1$ ✓̸

	$x^2 + 5x + 7 = 9x + 4$ ✓
Exceptionally this error is not treated as a transcription error as the candidate deals with the intended quadratic equation. The candidate has been given the benefit of the doubt.	$x - 4x + 3 = 0$ ✓
	$(x-3)(x-1) = 0$
	$x = 1$ or 3 ✓

12 **Cross marking**
Where a question results in two pairs of solutions, this technique should be applied, but only if indicated in the detailed marking instructions for the question.

Example: Point of intersection of line with curve

Illustrative Scheme:		Cross marked:	
•5	$x = 2,\ x = -4$	•5	$x = 2,\ y = 5$
•6	$y = 5,\ y = -7$	•6	$x = -4,\ y = -7$

Markers should choose whichever method benefits the candidate, but **not** a combination of both.

13 In final answers, numerical values should be simplified as far as possible.

Examples: $\frac{15}{12}$ should be simplified to $\frac{5}{4}$ or $1\frac{1}{4}$ $\qquad$ $\frac{43}{1}$ should be simplified to 43

$\frac{15}{0{\cdot}3}$ should be simplified to 50 $\qquad$ $\frac{4/5}{3}$ should be simplified to $\frac{4}{15}$

$\sqrt{64}$ must be simplified to 8 — The square root of perfect squares up to and including 100 must be known.

14 Commonly Observed Responses (COR) are shown in the marking instructions to help mark common and/or non-routine solutions. CORs may also be used as a guide in marking similar non-routine candidate responses.

15 Unless specifically mentioned in the marking instructions, the following should not be penalised:
- Working subsequent to a **correct** answer;
- Correct working in the wrong part of a question;
- Legitimate variations in numerical answers, eg angles in degrees rounded to nearest degree;
- Omission of units;
- Bad form;
- Repeated error within a question, but not between questions or papers.

16 In any 'Show that . . .' question, where the candidate has to arrive at a required result, the last mark of that part is not available as a follow through from a previous error.

17 All working should be carefully checked, even where a fundamental misunderstanding is apparent early in the candidate's response. Marks may still be available later in the question so reference must be made continually to the marking instructions. All working must be checked: the appearance of the correct answer does not necessarily indicate that the candidate has gained all the available marks.

18 Scored out working which **has not been replaced** should be marked where still legible. However, if the scored out working **has been replaced**, only the work which has not been scored out should be marked.

19 Where a candidate has made multiple attempts using the same strategy, mark all attempts and award the lowest mark.
Where a candidate has tried different strategies, apply the above ruling to attempts within each strategy and then award the highest resultant mark. For example:

Strategy 1 attempt 1 is worth 3 marks	Strategy 2 attempt 1 is worth 1 mark
Strategy 1 attempt 2 is worth 4 marks	Strategy 2 attempt 2 is worth 5 marks
From the attempts using strategy 1, the resultant mark would be 3.	From the attempts using strategy 2, the resultant mark would be 1.

In this case, award 3 marks.

20 It is of great importance that the utmost care should be exercised in totalling the marks.

A tried and tested procedure is as follows:

Step 1 Manually calculate the total from the candidate's script.

Step 2 Check this total using the grid issued with these marking instructions.

Step 3 Electronically enter the marks and obtain a total, which should now be compared to the manual total.

This procedure enables markers to identify and rectify any errors in data entry before submitting each candidate's marks.

21 **The candidate's script for Paper 2 should be placed inside the script for Paper 1, and the candidate's total score (ie Paper 1 Section B + Paper 2) written in the space provided on the front cover of the script for Paper 1.**

Question		Generic Scheme			Illustrative Scheme	Max Mark
21	a					
		•1	ss	know to differentiate and one term correct	•1 $=6x....$ or $=....-3x^2$	
		•2	ss	the other term correct and set derivative to 0	•2 $6x-3x^2=0$ stated explicitly	
					$\begin{array}{c:c} \bullet^3 & \bullet^4 \end{array}$	
		•3	pd	solve $\frac{dy}{dx}=0$	•3 $x=\ \ 0 \ \ \vdots\ \ 2$	
		•4	pd	evaluate y coordinates	•4 $y=\ \ 0 \ \ \vdots\ \ 4$	
		•5	pd	justify nature of stationary points	•5 use 2nd derivative or nature table	
		•6	ic	interpretation	•6 min. at $(0,0)$ and max. at $(2,4)$	**6**

Notes:

1. •2 is not available for statements such as '$\frac{dy}{dx}=0$' with no other working.
2. Accept $3x^2-6x=0$ for •2.
3. For candidates using a nature table, the minimum response for •5 is:

   x values 0 and 2; $\frac{dy}{dx}$ or expression $6x-3x^2$; signs and zeroes; shape.

		0		2	
$\frac{dy}{dx}$	$-$	0	$+$	0	$-$
	$\searrow$	$-$	$\nearrow$	$-$	$\searrow$

4. For candidates who differentiate correctly but then solve $\frac{dy}{dx}=0$ incorrectly, •4 may be awarded as a follow through mark. •5 and •6 are not available if a nature table has been used, but may be awarded where candidates have used the 2nd derivative.
5. For candidates who differentiate incorrectly •3 and •4 may be awarded as follow through marks. •5 and •6 are not available if a nature table has been used, but may be awarded where candidates have used the 2nd derivative.
6. At •6 stage accept min at $x=0$ and max at $x=2$.
7. Candidates who find the x-coordinates of the SPs correctly but correctly process only one of these to determine its nature, gain •6 but not •5.

Commonly Observed Responses:

Candidate A

$\frac{d^2y}{dx^2} = 6 - 6x$

at $x = 0$, $\frac{d^2y}{dx^2} > 0$, at $x = 2$, $\frac{d^2y}{dx^2} < 0$ •5 ✓

hence minimum SP at $x = 0$, maximum SP at $x = 2$ •6 ✓

Candidate B

$\frac{dy}{dx} = 6x - 3x^2 = 0$ •1 ✓ •2 ✓

$3x(3-x) = 0$

$x = 0, x = 3$ •3 x

$y = 0, y = 0$ •4 ✓

Case (i)

$\frac{d^2y}{dx^2} = 6 - 6x$

$x = 0 \Rightarrow \frac{d^2y}{dx^2} > 0 \Rightarrow$ Minimum SP •5 ✓

$x = 3 \Rightarrow \frac{d^2y}{dx^2} < 0 \Rightarrow$ Maximum SP •6 ✓

Case (ii)

x	$\rightarrow$	0	$\rightarrow$	3	$\rightarrow$
$\frac{dy}{dx}$	$-$	0	?	?	$+$

•5 x •6 x

? inconsistent. Different signs for $6x - 3x^2$ or $3x(3-x)$

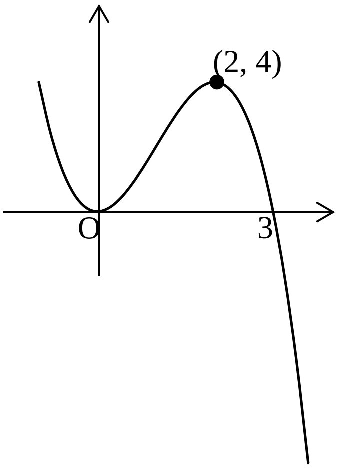
21	**b**		
•7 pd find intercepts •8 ic sketch		•7 $3x^2 - x^3 = 0$ **and** $(3,0)$ or $x = 3$; $(0,0)$ [may appear in part a] •8 sketch	**2**

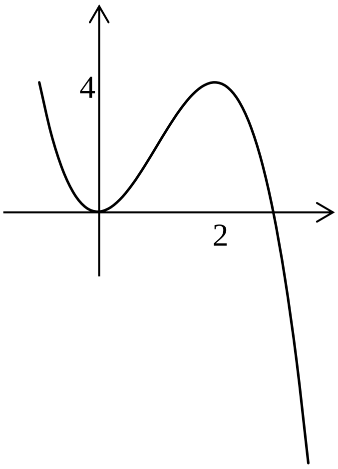
Notes:

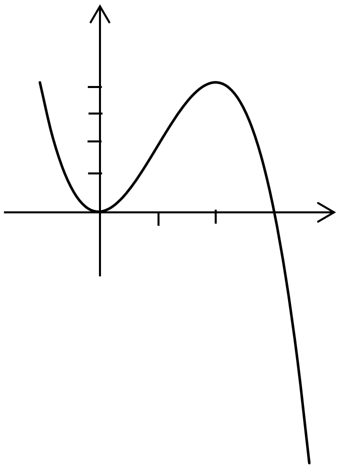
8. •7 accept $3x^2 - x^3 = 0$ **and** correctly annotated diagram with 0, 3 and no other intercepts marked on sketch.
9. The minimum required for •8 is a cubic curve, consistent with the SPs found in part (a) and appropriate number of x intercepts appearing on their sketch. It must be possible to determine the coordinates of the SPs from the sketch.

Commonly Observed Responses:

The following are acceptable for •[8]







Do not accept the following for •[8]

•1	ss	substitute $3x-5$	•1	$x^2+(3x-5)^2+2x-4(3x-5)-15=0$	
•2	pd	express in standard quadratic form	•2	$10x^2-40x+30=0$	
•3	pd	find x-coordinates	•3	$x=1$	$x=3$	
•4	pd	find y-coordinates	•4	$y=-2$	$y=4$ •3 •4	4

Notes:

1. '$=0$' must appear at •1 or •2 for mark •2 to be awarded.
2. If $x=\frac{1}{3}(y+5)$ is substituted at •1 then $10y^2-20y-80=0$ is obtained at •2.
3. **Special Case:** In cases where $x=1$ **and** $x=3$ do not appear as a result of •1 and •2, but are substituted into the equation of the line to obtain the y values, **if** the candidate then checks that both points lie on the circle, $3/4$ marks are awarded. If, in addition, the candidate makes a statement to the effect that a line can only cut a circle in, at most, 2 points, then $4/4$ marks are awarded. Otherwise, $0/4$ marks.
4. •3 and •4 are not available for any attempt to solve a quadratic equation of the form $ax^2+bx=c$

Commonly Observed Responses:

		$\bullet^4$ pd find k	$\bullet^4$ $k = 81$	
		$\bullet^5$ pd find a	$\bullet^5$ $a=3$	

Notes:

1. Candidates who start with $\bullet^3$ $\log_9 y = \log_9 k + x\log_9 a$ also gain $\bullet^1$ and $\bullet^2$.
2. In Method 1, base 9 must appear by $\bullet^4$ stage, for $\bullet^1$ to be awarded.
3. For $k = 81$ and $a = 3$ with spurious or no working, $\bullet^4$ and $\bullet^5$ are not available.

Commonly Observed Responses:

Candidate A

$\log y = \log ka^x$	$\bullet^1$ ✗	See Note 2
$\log y = \log k + \log a^x$	$\bullet^2$ ✓	
$\log y = \log k + x\log a$	$\bullet^3$ ✓	
$k = 81$	$\bullet^4$ ~~✓~~	No evidence of which base is being used.
$a = 3$	$\bullet^5$ ✓	Answers at both $\bullet^4$ and $\bullet^5$ are consistent with using base 9.

Candidate B : A combination of Method 1 and Method 2.

M2 $\quad \log_9 y = \frac{1}{2}x + 2 \quad \bullet^1$ ✓

M1 $\quad \log_9 y = \log_9 ka^x$

$\Rightarrow \log_9 y = x\log_9 a + \log 9k \quad \bullet^2$ ✓ $\bullet^3$ ✓

equating gradients and intercepts

$\log_9 a = \frac{1}{2}$

$a = 9^{\frac{1}{2}} = 3 \quad \bullet^4$ ✓

$\log_9 k = 2 \quad \bullet^5$ ✓

$k = 9^2 = 81$

Candidate C

at $(0, 2)$ $\log_9 y = 2$

$\Rightarrow y = 9^2 = 81 \quad \bullet^1$ ✓

Substitute into equation

$81 = ka^0$

$\Rightarrow k = 81 \quad \bullet^2$ ✓

at $(6, 5)$ $\log_9 y = 5$

$\Rightarrow y = 9^5 \quad \bullet^3$ ✓

substitute into equation

$9^5 = ka^6$

$\Rightarrow 9^5 = 81a^6 \quad \bullet^4$ ✓

$\Rightarrow a^6 = 9^3 = 3^6$

$\Rightarrow a = 3 \quad \bullet^5$ ✓

$y+2x+6=0$ •5 X $\Rightarrow$ $y+2x=-6$

$y+4x=-5$ •6 X

$\Rightarrow 2x=1,\ \ x=\frac{1}{2},\ y=-7$

•5 is a strategy mark. The correct strategy is to solve the **given equation** with the equation from part (a) simultaneously. •5 is not awarded as the given equation has not been used.

The equation obtained at stage •4, has been rearranged incorrectly in part (b). The next pd mark, •6, is therefore not awarded.

Question		Generic Scheme	Illustrative Scheme	Max Mark
9	a			
		•1 ss know to differentiate	•1 $a = v'(t)$	
		•2 pd differentiates trig. function	•2 $-8\sin\left(2t-\frac{\pi}{2}\right)\ldots\ldots$	
		•3 pd applies chain rule	•3 $\ldots\ldots\times 2$ and complete $a(t) = -16\sin\left(2t-\frac{\pi}{2}\right)$	3

Commonly Observed Responses:

Candidate A: Alternative Method

Part (a)

$v(t) = 8\cos\left(2t-\frac{\pi}{2}\right) = 8\sin 2t$

$v'(t) = \ldots.$ •1 ✓

$= 8\cos 2t\ldots$ •2 ✓

$= \ldots\ldots\times 2$ •3 ✓

Part (b)

$v'(10) = 16\cos 20 = 6\cdot 53$ •4 ✓

$> 0, \Rightarrow$ velocity is increasing •5 ✓

Part (c)

$s(t) = \int v(t)\,dt$ •6 ✓

$s(t) = -4\cos 2t + c$ •7 ✓

$4 = -4 + c \Rightarrow c = 8$

$\Rightarrow s(t) = -4\cos 2t + 8$ •8 ✓

or $\Rightarrow s(t) = 8 - 4\cos 2t$

Candidate B: Candidates who misinterpret the process for rate of change.

Part (a)

$a(t) = \int 8\cos\left(2t-\frac{\pi}{2}\right)dt$

$= 4\sin\left(2t-\frac{\pi}{2}\right) + c$

Wrong process award $0/3$

Part (b)

If $t = 10$, $a = 4\sin\left(20-\frac{\pi}{2}\right) + c$

$= -1\cdot 63 + c$

Cannot evaluate award $0/2$

Part (c)

$s = v'(t)$

$s(t) = -16\sin\left(2t-\frac{\pi}{2}\right)$

Award $2/3$

Candidate C

Part (a)

$a = v'(t)$ or equivalent •1

$a = 4\sin\left(2t-\frac{\pi}{2}\right)$ •2 ✗ •3 ✗

Part (b)

$a(10) = 4\sin\left(20-\frac{\pi}{2}\right) = -1\cdot 63$ •4

<0, So decreasing •5 ✓

Only as a consequence of •1 in part (a)

Question		Generic Scheme		Illustrative Scheme		Max Mark
9	**b**					
$\bullet^4$	ss	know to and evaluate $a(10)$	$\bullet^4$	$a(10)=6\cdot 53$		
$\bullet^5$	ic	interpret result	$\bullet^5$	$a(10)>0$ therefore increasing		**2**

Notes:

1. $\bullet^5$ is available only as a consequence of substituting into a derivative.
2. $\bullet^4$ and $\bullet^5$ are not available to candidates who work in degrees.
3. $\bullet^2$ and $\bullet^3$ may be awarded if they appear in the working for 9(b). However, $\bullet^1$ requires a clear link between acceleration and $v'(t)$.

Question		Generic Scheme		Illustrative Scheme		Max Mark
9	**c**					
$\bullet^6$	ic	know to integrate	$\bullet^6$	$s(t)=\int v(t)\,dt$		
$\bullet^7$	pd	integrate correctly	$\bullet^7$	$s(t)=4\sin\left(2t-\frac{\pi}{2}\right)+c$		
$\bullet^8$	ic	determine constant and complete	$\bullet^8$	$c=8$ so $s(t)=4\sin\left(2t-\frac{\pi}{2}\right)+8$		**3**

Notes:

4. $\bullet^7$ and $\bullet^8$ are not available to candidates who work in degrees. However, accept $\int 8\cos(2t-90)\,dt$ for $\bullet^6$.
