Autism 24/7

by Andy Bondy, Ph.D. and Lori Frost, M.S., CCC-SLP, 2009, 169 pages.

If your son or daughter is over-stimulated by noisy places or has trouble communicating or interacting with people, then everyday activities like going to the playground or helping out with household chores may seem outside your child's repertoire. Authors Bondy and Frost, the developers of the award-winning Pyramid Approach to educating individuals with autism, show how it is possible to keep family life running smoothly and teach an individual with autism to participate in important and routine family activities at home and in the neighborhood. Their teaching strategies can be used during the course of everyday life without making too many adjustments or converting your home into a school. In a reassuring, easy-to-read style, *Autism 24/7* encourages parents to pinpoint times when their child's behaviour or lack of skills seems to interfere with family functioning. This step helps identify what to teach your child and what goals to set.

A Picture's Worth, 2nd Edition

by Andy Bondy, Ph.D., and Lori Frost, M.S., CCC-SLP, 2011, 160 pages, 21 photos.

Written by our very own Andy Bondy and Lori Frost, *A Picture's Worth, 2nd Edition*, examines the value of nonverbal communication strategies for individuals with autism, and describes the Picture Exchange Communication System (PECS). Without the ability to express themselves, individuals with autism experience a high level of frustration, which is the root cause of many undesirable behaviours. The book explores the relationship between behaviour and communication, teaching parents how to recognize patterns in their child's behaviour and when to implement an augmentative and alternative communication (AAC) system such as PECS. This new edition cites research that proves PECS (and other AAC strategies) does not interfere with the development of speaking skills, and actually often provides a boost to speech acquisition. Thousands of people with autism and other speech disabilities have benefited from using PECS. The book's complete set of introductory lessons makes it easy for parents and therapists to get started using this low-tech strategy to help anyone develop effective communication skills!

Verbal Behaviour

by B.F. Skinner, 1958, Soft Cover, 478 pages.

This book laid the foundation for the development of the PECS training protocol. The book presents a systematic functional analysis of language based on the principles of learning. Skinner proposes that verbal behaviour requires an analysis separate from other behaviour because it does not operate on the environment directly, but rather through other people in a verbal community. He describes several parts of communication defined by their relationship to specific antecedents and consequences, from the simplest features of language to its most complicated aspects. He also stresses that verbal behaviour is defined by its function, not by its form- thus, for example, PECS permits any user to engage in verbal behaviour. Read the chapter by Andy Bondy in the *PECS Training Manual, 2nd Edition*, (page 3) for a thorough discussion on PECS and *Verbal Behaviour* and attend our workshop: *Analyzing and Fine Tuning Communication*.

Audio Reinforcement Reminder Tones CDs

Instructors who use Differential Reinforcement Systems will find these CDs essential. Pop a CD into your CD player, select the track according to the interval you need, and repeat the track for a continuous reminder to catch your learners "being good!" CD #1 has 1, 2, 3, and 5-minute intervals. CD #2 has 7 and 10-minute intervals. CD #3 has 15-minute intervals. Each track plays a distinct tone so that you can play more than one CD at a time for learners needing different intervals and recognize which interval is sounding. Each tone is activated on a randomized, variable schedule (the three-minute tone sounds on average every three minutes). These tones also are a great tool for instructors who are teaching individuals to monitor their own behaviour.

Timed Activity Schedule

We found these fantastic digital bookmarks for learners' activity schedules. Activity schedules are used to indicate the specific activities and order of activities to be finished within a particular lesson. For example, a learner's goal might be to complete several cleaning tasks in the kitchen, worksheets during class, or exercises during a physical education class within a specified time period. The timer promotes independent completion of the activities within a time period programmed by the teacher. The teacher reinforces the completion of all activities within the specified time and gradually reduces the time allowed until the learner reaches the final goal! We add a strip of VELCRO® Brand hook fasteners so that you can add your own pictures. At the top of these durable plastic strips is a digital clock powered by an included, replaceable watch battery. Choose to set a countdown timer with alarm that alerts learners when their time is up or set the cumulative timer to store time over multiple activities. *Pictures sold separately.*
