21-Day Keto Paleo PCOS Meal Plan

A Paleo and Ketogenic diet, whether on their own, or mixed together have been proven to have positive effects on your body, especially if you have PCOS or other autoimmune diseases. As some of you know, my blog is entirely devoted to low carb recipes that are gluten-free and sugar-free. I have found that by doing these three things, my health has improved drastically and my PCOS is in complete remission. You can actually read more about my story [here](#) if you'd like to know more about me and what I've been doing to take control of my symptoms.

Paleo and Ketogenic diets are actually quite similar as they both are high in fat, moderate in protein and low in carbohydrates. There are basically four rules to a Paleo diet. No grains, no legumes, no dairy and no sugars. A ketogenic diet, depending on which type of keto dieter you are, is usually between 0-50g net carbs per day, but most commonly between 0-20g. Moreover, not all keto dieters will stop eating grains/high carb vegetables, legumes and dairy. The general rule is that as long as it fits within your macros, it is acceptable, but then again that really depends on the belief of the dieter. Everyone is different. I personally do not do grains, gluten, or sugar, but I do the other things in moderate amount. Personally, if I were to eat gluten or sugar again, I feel like my body would crave it so bad and it would be hard for me to go back to a low carb lifestyle, so I try to avoid them as best as I can.

This meal plan is Paleo = Grain-free, Gluten-free, Sugar-free, Dairy-free

If you're familiar with my blog 'My PCOS Kitchen', you'll know that I do not post recipes that contain gluten or sugar as I sincerely believe that these are bad for us PCOS cysters. Even if you do not follow a ketogenic diet, by simply eliminating gluten and sugar, you will start to notice positive changes within your body as time goes by. My blog is not entirely dairy-free as I do consume dairy from time to time, but for the sake of this meal plan, I decided to keep it Paleo friendly because people seem to lose more weight when they cut out dairy. If you find yourself stalling in your diet and haven't lost weight in a while, it's a good idea to cut back on the dairy and see if you lose more weight that way. I wanted to show everyone that it is possible to eat dairy-free on a keto diet, it's hard as everything taste so good with it, but definitely doable. I did not nor do not usually upload recipes with grains because they're high carb, so this meal plan also does not include grains. I know that technically ghee is Paleo, but I really wanted to keep this meal plan dairy-free so I have not included it in any of my recipes. I used olive oil to fry my veggies and meat, but you are free to choose your preferred oil of cooking, whether coconut, beef tallow, lard, duck fat or any other type of healthy oils/fats.

Where are all the desserts and fruits at?!

Haha, sorry! Think of this meal plan as a little introduction to a low carb lifestyle. Try to get your body used to sugar-free living for a few weeks before reintroducing them into your diet. While a ketogenic diet usually only allows berries as they have the lowest of carbs, paleo diets usually allow fruits in moderate amount. However, since I wanted to keep this meal plan really low carb, I decided to not use any fruits in my recipes. Obviously you are free to eat some if you wish, but if you are new to low carb cooking or a ketogenic lifestyle, you may want to avoid them for the time being, or until you start losing weight. I also didn't include any treats just because I wanted this meal plan to be an introduction to a low carb lifestyle. Just because you eat low-carb, it doesn't mean you can eat cheesecake or chocolate cake every day. Eat them once in a while, but try not to make a habit of them!

Extra fat?

I did not include fat bombs or Bulletproof Coffee's in this meal plan because I simply didn't feel they were needed. Also, I personally don't drink coffee so I didn't include any because I don't have any at home nor do I ever make some. If you want to drink a BPC, feel free to do so, just add the fat and calories by yourself to the nutritional value.

Are you hungry?

If you feel at all hungry during this meal plan, eat. Don't starve yourself and don't think that you are limited because you're not. The first few days can be rough, but by eating a healthy diet full of healthy fats and protein, you should feel satiated at every meal. If you're not hungry, then don't eat. It's fine if you skip a meal, but just don't starve yourself. I would say try to intake minimum 1200 calories a day so that you're functioning properly.

What are your macros?

This meal plan is obviously designed by me and so these are the macros that I personally use. I eat between 1200-2000 calories per day (depending on the food I make), 20-30g net carbs per day, 80-140g fat and 80-110g protein. There are multiple macros calculators online where you can check how many calories, grams of fat/protein/carbs you should eat. Depending on your weight, activity fitness, health, gender, age and goal weight, everyone's macros will be different. This meal plan is made to fit my personal macros as this is the food I ate, but you can customize this meal plan the way you want. Feel free to add or remove anything

from it so that it can better fit your lifestyle. This is a general idea of what you could eat on a ketogenic diet and I hope that it can help you. Here are two popular calculators that you can use to calculate your macros. The '[She Calls Me Hobbit](#)' calculator and the '[Ketogains](#)' calculator. Try out both and see which one you prefer to use. If ever you find that you are not losing any weight, try to change your macros a bit. This usually helps as sometimes you may be eating too much protein or fat without even realizing it.

What are NET carbs?

Total Carbohydrates MINUS Fiber MINUS Sugar Alcohols = NET Carbs

Common Temporary Side Effects from a Ketogenic Diet

When you first start eating low carb, you may or may not experience some temporary side effects at first. These do not usually last more than a few days, but could last up to two weeks. They are temporary and are just side effects from your body cleaning itself. The most important thing to remember while on a Keto diet is that you MUST drink lots of water and take minimum 1.5 tsp of salt per day. This can be sprinkled on various food or even just mixed in water. You can also take some magnesium supplements (malate or glycinate). When you don't feel too well, have no energy, have headaches, or have leg cramps (especially at night), it's because your body is lacking salt, magnesium and potassium. Sprinkle a bit of salt on all of your food and you'll feel better in no time. Sometimes, you can also get the 'Keto Rash' the first week or two, which is a common side effect to eating low carb. The easiest way to get rid of it is to up your carbs to 50g, but if you can deal with it, it WILL disappear within two weeks. This happened to me the first time and your body gets really itchy and you just want to up your carbs to fix it, but if you stick with it, it will disappear. It just takes time. I personally got some anti-itch cream from the doctors and that seemed to help as the rash went away a couple of days later. When you have the keto flu, a lot of people suggest drinking pickle juice, because your body is telling you that you need electrolytes. So just make sure to get enough sodium, potassium and magnesium throughout the day and the fatigue, muscle twitching, headaches and muscle cramps will disappear. Some people swear by the pickle juice and it seems to work instantly or within a couple of hours so just know that you have that option if you feel sluggish!
