QUESTION 1

When a Cisco Email Security Appliance joins a cluster, which four settings are inherited? (Choose four.)

- A. IP address
- B. DNS settings
- C. SMTP routes
- D. HAT
- E. RAT
- F. hostname
- G. certificates

Correct Answer: BCDE

QUESTION 2

Drag and drop the steps on the left into the correct order of initial Cisco IOS IPS configuration on the right.

Select and Place:

Enable Cisco IOS IPS

Enable the Cisco IOS IPS crypto key.

Load the Cisco IOS IPS signature package to the router

Download IPS files from Cisco.com.

step 1

step 2

step 3

step 4

Correct Answer:

QUESTION 3

Which option describes a customer benefit of the Cisco Security IntelliShield Alert Manager?

- A. It provides access to threat and vulnerability information for Cisco related products only.
- B. It consolidates vulnerability information from an internal Cisco source, which allows security personnel to focus on remediation and proactive protection versus research.
- C. It provides effective and timely security intelligence via early warnings about new threats and technology vulnerabilities.
- D. It enhances the efficiency of security staff with accurate, noncustomizable threat intelligence, critical remediation information, and easy-to-use workflow tools.

Correct Answer: C

QUESTION 4

Which Cisco ASA platform should be selected if the requirements are to support 35,000 connections per second, 600,000 maximum connections, and traffic shaping?

- A. 5540
- B. 5550
- C. 5580-20
- D. 5580-40

Correct Answer: C

QUESTION 5

Which two methods are used to deploy transparent mode traffic redirection? (Choose two)

- A. Microsoft GPO
- B. policy-based routing
- C. DHCP server
- D. PAC files
- E. Web Cache Communication Protocol

Correct Answer: BE

QUESTION 6

Which two pieces of information are required to implement transparent user identification using context Directory Agent? (Choose two.)

- A. the shared secret
- B. the server name where Context Directory Agent is installed
- C. the server name of the global catalog domain controller
- D. the syslog server IP address

Correct Answer: AB

QUESTION 7

The Web Security Appliance has identities defined for faculty and staff, students, and default access. The faculty and staff identity identifies users based on the source network and authenticated credentials. The identity for students identifies users based on the source network along with successful authentication credentials. The global identity is for guest users not authenticated against the domain. Recently, a change was made to the organization's security policy to allow faculty and staff access to a social network website, and the security group changed the access policy for faculty and staff to allow the social networking category.

Which are the two most likely reasons that the category is still being blocked for a faculty and staff user? (Choose two.)

- A. The user is being matched against the student policy because the user did not enter credentials.
- B. The user is using an unsupported browser so the credentials are not working.
- C. The social networking URL was entered into a custom URL category that is blocked in the access policy.
- D. The user is connected to the wrong network and is being blocked by the student policy.
- E. The social networking category is being allowed but the AVC policy is still blocking the website.

Correct Answer: CE

QUESTION 8

Scenario

In this simulation, you have access to the mail flow policies and sender groups configured on a Cisco Email Security Appliance. You are also provided the following list of fictional domains. SenderBase has records for one sender from each of these domains. The list provides the domain name and the SenderBase Reputation Score for the domain's sender.

V120 red.public, -6
 orange.public, -4
 yellow.public, -2
 green.public, 2
 blue.public, 6
 violet.public, 8

Your task is to review the configuration on the Cisco Email Security Appliance, and then answer 5 multiple choice questions about the behavior of the Cisco Email Security Appliance given the configuration and the domain SenderBase Reputation Scores.

Instructions

Access the configuration of the Cisco Email Security Appliance using the MailFlowPolicies tab. Within the GUI, you can navigate between the HAT Overview and Mail Flow Policies tables. You can also navigate to the individual Mail Flow Policies and Sender Groups that are configured on the appliance.

Consider the configuration and the SenderBase Reputation Scores of the following fictitious domains when answering the 5 multiple choice questions.

- red.public, -6
- orange.public, -4
- yellow.public, -2
- green.public, 2
- blue.public, 6
- violet.public, 8

THIS TASK DOES NOT REQUIRE DEVICE CONFIGURATION.
 Click on the MailFlowPolicies tab to access the device configuration.
 To access the multiple-choice questions, click on the numbered boxes on the left of the top panel.
 There are four multiple-choice questions with this task. Be sure to answer all four questions before selecting the Next button.

- E. 100 MB
- F. Unlimited

Correct Answer: D

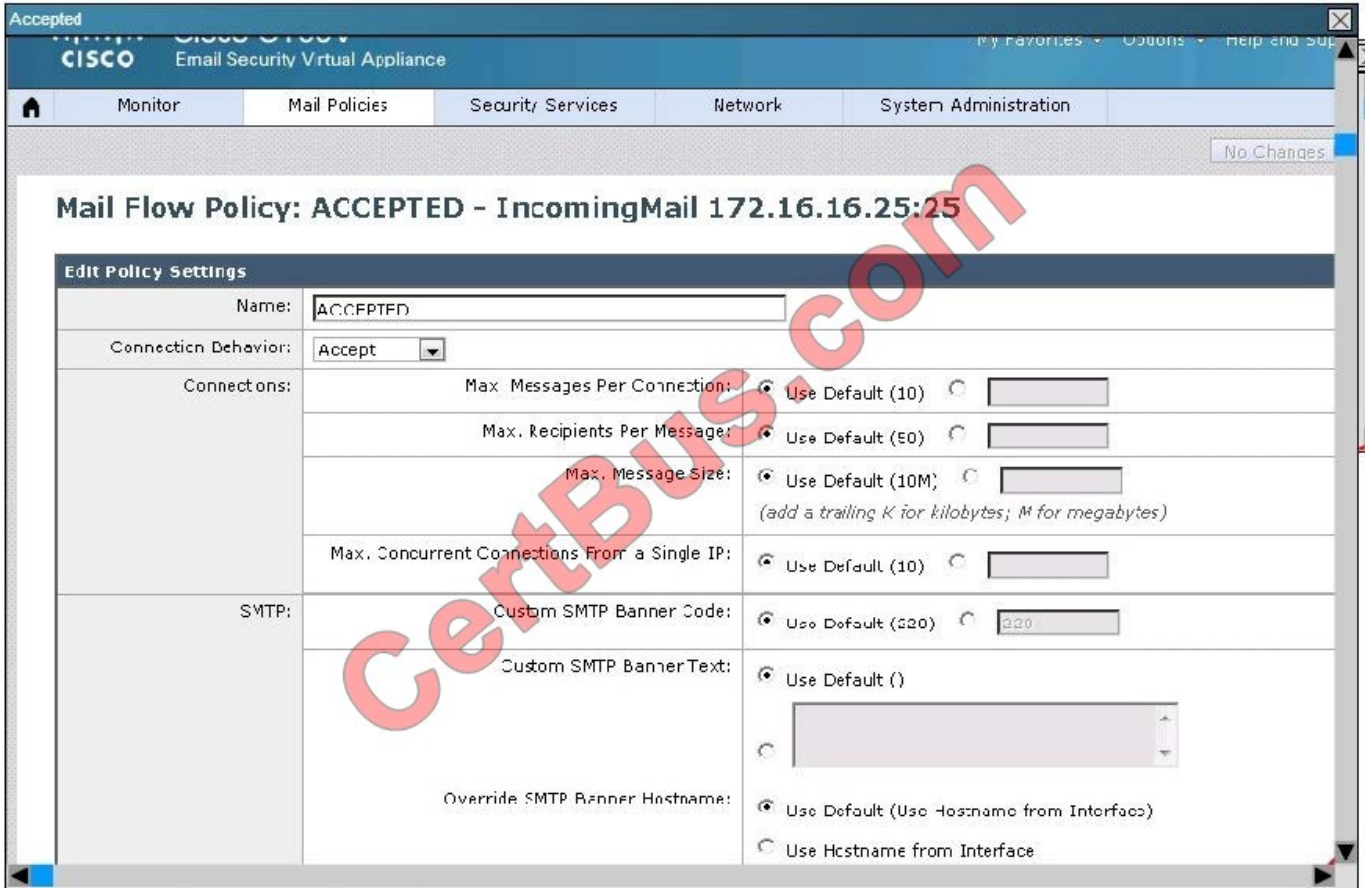

From the instructions we know that the reputation score for the violet.public domain has been set to 8. From the HAT table shown below we know that a score of 8 belongs to the UNKNOWNLIST group, which is assigned the ACCEPTED policy.

The screenshot shows the Cisco C100V HAT Overview page. At the top, it says "Cisco C100V Email Security Virtual Appliance" and "Logged in as: admin on esa.secure". The navigation tabs include Monitor, Mail Policies, Security Services, Network, and System Administration. The main content area is titled "HAT Overview" and contains a "Find Senders" search box. Below that is a "Sender Groups" section for the listener "IncomingMail 172.16.16.25:25". It features a table with columns for Order, Sender Group, SenderBase™ Reputation Score, Mail Flow Policy, and Delete. The table lists five sender groups: RELAYLIST (RELAYED), WHITELIST (TRUSTED), BLACKLIST (BLOCKED), SUSPECTLIST (THROTTLED), and UNKNOWNLIST (ACCEPTED). The "ALL" group is highlighted in yellow and has a policy of "ACCEPTED". A "Key" section at the bottom right shows "Custom" and "Default" options.

Order	Sender Group	SenderBase™ Reputation Score	Mail Flow Policy	Delete
1	RELAYLIST		RELAYED	
2	WHITELIST		TRUSTED	
3	BLACKLIST		BLOCKED	
4	SUSPECTLIST		THROTTLED	
5	UNKNOWNLIST		ACCEPTED	
	ALL		ACCEPTED	

Capture

By clicking on the ACCEPTED policy we see that max message size has been set to the default value of 10M:

QUESTION 9

Which Cisco Advanced Malware protection for Endpoints deployment architecture is designed to keep data within a network perimeter?

- A. cloud web services
- B. network AMP
- C. private cloud
- D. public cloud

Correct Answer: C

QUESTION 10

An engineer wants to configure a method to verify the authenticity of emails on cisco ESA and noticed the sender policy framework. How can the SPF help in that task?

- A. SPF allows the sender to sign the email using preshared key

B. SPF allows the sender to sign the email using public key

C. SPF allows the owner of an internet domain to use DNS TXT records to specify which machines are authorized to transmit email for that domain.

D. The list of authorized sending hosts for a domain is published in the Domain Name System (DNS) records for that domain in the form of a specially formatted TXT record

Correct Answer: B

QUESTION 11

When a user receives an encrypted email from a Cisco ESA, which technology is used to retrieve the key to open the email?

A. trusted certificate authority

B. private certificate authority

C. Cisco Registered Envelope Service
