*The values of fuel consumptions, CO₂ emissions and energy consumptions shown were determined according to the European Regulation (EC) 715/2007 in the version applicable at the time of type approval. The figures refer to a vehicle with basic configuration in Germany and the range shown considers optional equipment and the different size of wheels and tires available on the selected model. The CO₂ efficiency specifications are determined according to Directive 1999/94/EC and the European Regulation in its current version applicable. The values shown are based on the fuel consumption, CO₂ values and energy consumptions according to the NEDC cycle for the classification. The basis for the calculation of the charging times for 100 km range is the electric consumption. Values refer to 23 degrees Celsius battery start and ambient temperature with certification values excluding additional auxiliary consumers such as seat heating, displays, air conditioning. Individual consumption may differ (driving profile, temperature, ambient conditions). Consumption is based on WLTP best case. Information provided and images displayed on this site include overseas models and may show some features not available in New Zealand. Please contact an authorised BMW dealer for specific information on vehicles and features available in New Zealand. Product changes may have been made since production of this content. Effective March 2022.

Note: To obtain NZ CO₂ figures for vehicles imported by BMW Group New Zealand in relation to the NZ Clean Car discount or "Feebate" you will need to contact your proffered dealer. The Clean Car discount figures sourced from your dealer will differ to the BMW handbook and reported figures as they have been converted by the NZ government from either WLTP4 or NEDC or CAFE test cycle to WLTP3.
