USE IT or LOSE IT!

COMMUNICATION OCCURS IN THE BRAIN

When we lose our ability to hear, the ear stops sending needed information to the brain, which effects our ability to understand what is being said. This is called Auditory Deprivation.

Auditory Deprivation may impair the way the brain processes sound.

The solution may be hearing aids. Hearing aids may help send the correct information to the brain and may protect the brain from atrophy.

Untreated Hearing Loss May Lead to Dementia Read the Johns Hopkins study online at www.accuquest.com/dementia
