### QUESTION 1

You are managing a SharePoint farm in an Active Directory Domain Services (AD DS) forest.

The forest contains two domains named `americas.contoso.com` and `europe.contoso.com`. A single SharePoint farm is located in the `americas.contoso.com` domain and uses Kerberos authentication.

Users in the `europe.contoso.com` domain cannot access the Excel Services application in the `americas.contoso.com` domain when using an external data source.

You need to ensure that users in the `europe.contoso.com` domain can use the Excel Services application with external data sources.

What should you do?

- A. Deploy a SharePoint farm in the `europe.contoso.com` domain.
- B. Configure Kerberos constrained delegation.
- C. Configure basic Kerberos delegation.
- D. Configure anonymous access in the SharePoint farm.

Correct Answer: A

---

### QUESTION 2

You deploy a SharePoint Server 2013 server farm.

You receive a custom display template.

You need to ensure that the custom display template is available in a site collection.

What should you use to upload the template?

- A. Design Manager
- B. composed looks
- C. result types
- D. the Style Library

Correct Answer: B

You can view existing display templates in Design Manager, but you don't create them in Design Manager the way that you create master pages and page layouts. Instead, you:

\*

Open your mapped network drive to the Master Page Gallery.

\*

Open one of the four folders in the Display Templates folder.

\*

Copy the HTML file for an existing display template that's similar to what you want. The exact location that you copy the file to does not matter, as long as it is in the Master Page Gallery.

\*

Open and modify your copy in an HTML editor.

---

### QUESTION 3

A company has an Active Directory Domain Services (AD DS) domain and a SharePoint environment. The SharePoint environment includes a team site for each department.

All domain users have Read permissions on the root site. Currently only Human Resources department members have access to the Human Resources team site.

You have the following requirements for the Human Resources site:

Employees who are not members of the Human Resources department can view only content that is not marked as sensitive.

Human Resources department members can view all content.

You need to configure permissions for the Human Resources site.

Which three actions should you perform in sequence?

(To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

	Answer Area
Assign the Limited Access permission level on the sensitive content to all users who are not members of the Human Resources department.	
Configure the sensitive content in the Human Resources site to break inheritance from the parent site.	
Assign the Limited Access permission level on the Human Resources site to users who are not members of the Human Resources department.	
Configure the Human Resources site to inherit permissions from the root site.	
Remove the Read permission level on the sensitive content from users who are not members of the Human Resources department.	

Correct Answer:

	Answer Area
Assign the Limited Access permission level on the sensitive content to all users who are not members of the Human Resources department.	Configure the Human Resources site to inherit permissions from the root site.
	Configure the sensitive content in the Human Resources site to break inheritance from the parent site.
Assign the Limited Access permission level on the Human Resources site to users who are not members of the Human Resources department.	Remove the Read permission level on the sensitive content from users who are not members of the Human Resources department.

Note:

\* Incorrect: "The Limited Access permission level is designed to be combined with fine-grained permissions to give users access to a specific list, document library, item, or document, without giving them access to the entire site. However, to access a list or library, for example, a user must have permission to open the parent Web site and read shared data such as the theme and navigation bars of the Web site. The Limited Access permission level cannot be customized or deleted" "Limited Access" allows no direct access to site content at all, but is intended to allow users to traverse the site in order to access the items within it that they have explicit permissions to see. Reference: Permission

levels and permissions

#### QUESTION 4

A three-tiered SharePoint farm contains two front-end web servers, one application server, and one enterprise database server. The database server is also used by other critical line-of-business applications. You do not have administrative rights on the database server.

The SharePoint content databases are fragmented and are degrading the performance of other databases.

You need to access the correct tools for performing maintenance on the SharePoint content databases.

Which option should you choose? (To answer, select the appropriate option in the answer area.)

Hot Area:

## Monitoring

### Health Analyzer

Review problems and solutions | Review rule definitions

### Timer Jobs

Review job definitions | Check job status

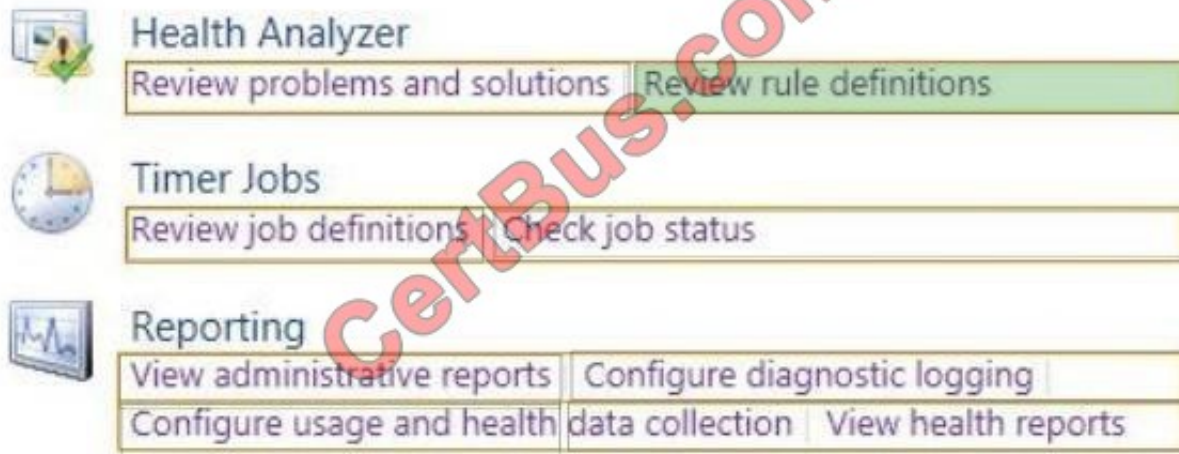

### Reporting

View administrative reports | Configure diagnostic logging  
Configure usage and health data collection | View health reports

Correct Answer:

# Monitoring

Note:

Resolution: Enable and run the crawl database defragmentation health rule

1. Verify that the user account that is performing this procedure is a member of the Farm Administrators group.
2. In Central Administration, on the home page, click Monitoring.
3. On the Monitoring page, in the Health Analyzer section, click Review rule definitions.
4. On the All Rules page, in the Performance section, click Search - One or more crawl databases may have fragmented indices.
5. If the rule is not enabled, in the Health Analyzer Rule Definitions dialog, click Edit Item on the ribbon. Ensure that the Enabled check box is selected, and then

click Save on the ribbon.

6. On the ribbon, click Run Now.

7. Click Close.

The rule iterates over all crawl databases in all Search service applications. When it runs, it attempts to perform an online defragmentation first, and then it

switches to offline defragmentation where required. In online defragmentation, only the SQL Server leaf pages are defragmented, not the SQL Server locked

pages. In offline defragmentation, the locked pages and all the leaf pages are defragmented.

Reference: Search - One or more crawl databases may have fragmented indices (SharePoint 2013)

## QUESTION 5

Your company has a SharePoint Server 2013 server farm.

Users report that they cannot add iframes to SharePoint pages that point to content on external websites.

You need to ensure that the users can add content to iframes from a list of predefined external sites.

What should you configure? (To answer, select the appropriate link in the answer area.)

Hot Area:

Storage Metrics
Site collection app permissions
Site Policies
Popularity and Search Reports
Content type service application error log
Content type publishing
<b>HTML Field Security</b>
Help settings
SharePoint Designer Settings
Site collection health checks
Site collection upgrade

Note: In regards to the cross-domain comments, even if it is cross-domain, you can allow the target domain under Site Collection Settings, HTML Field Security.

## QUESTION 6

A SharePoint farm includes two front-end web servers, one application server, and two clustered servers that run Microsoft SQL Server. The SharePoint Foundation Web Application service is not running on the application server.

You plan to configure the SharePoint farm to receive and store email messages and email message attachments in libraries.

You need to ensure that users can send email messages and attachments directly to libraries across the entire farm. You must accomplish this goal by using the least amount of effort.

Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.)

- A. Install and configure the Simple Mail Transfer Protocol (SMTP) service on each application server.
- B. Install and configure the Simple Mail Transfer Protocol (SMTP) service on each front-end web server.
- C. Enable and start the SharePoint Foundation Web Application service on each application server.
- D. Enable incoming email by using the Automatic settings mode.
- E. Enable and start the SharePoint Foundation Web Application service on each front-end web server.
- F. Enable incoming email by using the Advanced settings mode.

Correct Answer: BF

B (not A):

\*

Incoming email for SharePoint 2013 uses the SMTP service. You can use the SMTP service in one of two ways. You can install the SMTP service on one or more servers in the farm, or administrators can provide an email drop folder for email that is forwarded from the service on another server.

\*

If you are not using a drop folder for email, the SMTP service must be installed on every front-end web server in the farm that you want to configure for incoming email. F (not D):

\*

The basic scenario applies to a single-server farm environment and is recommended if you want to use default settings. The advanced scenario applies to a single-server farm or a multiple-server farm and contains several advanced options from which to choose

\*

To configure incoming email in an advanced scenario

1.

Verify that the user account that is performing this procedure is a member of the Administrators group on the server that is running the SharePoint Central Administration website.

2.

In Central Administration, click System Settings.

3.

On the System Settings page, in the E-Mail and Text Messages (SMS) section, click Configure incoming e-mail settings.

4.

If you want to enable sites on this server to receive email, on the Configure Incoming E-mail Settings page, in the Enable Incoming E-Mail section, click Yes.

5.

Select the Advanced settings mode. etc.

Not C, not E: The SharePoint Foundation Web Application service is not running on the application server. Reference: Configure incoming email for a SharePoint 2013 farm

#### QUESTION 7

You need to select the appropriate authentication method for App1. What should you do?

- A. Use classic mode authentication and set the authentication type to NTLM.
- B. Use classic mode authentication and set the authentication type to Kerberos.
- C. Use the SharePoint server-to-server security token service (STS).
- D. Use the Open Authorization 2.0 (OAuth 2.0) web authorization protocol.

Correct Answer: D

#### QUESTION 8

You need to provide access to the Corporate Projects site collection to remote internal users.

Which authentication mode and site collection URL should you use? (To answer, drag the appropriate answer choices to the correct location or locations in the answer area.)

Each answer choice may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

Select and Place:

Answer Area	
Authentication mode	Site collection URL

Correct Answer:

Authentication mode	Site collection URL
DirectAccess authentication	Path-based site collection

Box 1: DirectAccess authentication Box 2: Path-based site collections Note:

\* From scenario: Automate the sign-in experience by using the local AD FS 2.0 servers for AD FS single sign-on (SSO).

\* The Corporate Projects site collection must be available to internal users who connect from outside of the corporate network and must not require a VPN

connection

\* DirectAccess authenticates the computer before the user logs on. Typically, computer authentication grants access only to domain controllers and DNS servers.

After the user logs on, DirectAccess authenticates the user, and the user can connect to any resources he or she is authorized to access.

DirectAccess supports standard user authentication using a computer certificate and user account name and password credentials.

DirectAccess supports standard user authentication using a computer certificate and user account name and password credentials. For greater security, you can

implement additional authorization with smart cards. This type of configuration allows users to access Internet resources without their smart cards, but requires a

smart card before users can connect to intranet resources. A user must insert a smart card in addition to typing his or her user credentials. Smart card

authorization prevents an attacker who acquires a user's password (but not the smart card) from accessing the intranet. Similarly, an attacker who acquires the

smart card but does not know the user's password does not have access.

When smart cards are required for end-to-end authentication, you must use Active DirectoryDomain Services (AD DS) in Windows Server 2008 R2.

\* From scenario: Ensure that a web usage report that contains traffic reports, search reports, and inventory reports can be provided for any site.

\* Microsoft SharePoint supports both path-based and host-named site collections. The primary difference between path-based and host-named site collections is

that all path-based site collections in a Web application share the same host name (DNS name), and each host-named site collection in a Web application is

assigned a unique DNS name.

Path-based site collections

Ex: <http://www.company.com/sites/cust1>

<http://www.company.com/sites/cust2>

<http://www.company.com/sites/cust3>

Host-named site collections

Ex: <http://cust1.company.com>

<http://cust2.company.com>

---

## QUESTION 9

Your network contains an Active Directory forest. The forest contains a single domain named [adatum.com](http://adatum.com).

The network contains a SharePoint Server 2013 server farm. The farm contains a single web application named Web1. Users connect to Web1 by using the URL <http://web1.adatum.com>.

You need to configure the People Picker control to display only users who are members of organizational units (OUs) named Managers and Contractors.

What should you do?

- A. Modify the User Information List of the site collection.
- B. Set the `Peoplepicker-setsiteuseraccountdirectorypath` property of the site collection.
- C. Set the `Peoplepicker-searchadforests` property of the site collection.
- D. Modify the User Policy of Web1.

Correct Answer: B

\*

Operation name: `Setsiteuseraccountdirectorypath`

Sets the site user account directory path to a specific organizational unit (OU) in the same domain when the url and path parameters are specified.

\*

Example

To set a list of users to a specific OU (for example, Sales) in the Contoso Corp domain, use the following syntax:

`stsadm -o setsiteuseraccountdirectorypath -path "CN=Sales,DC=ContosoCorp,DC=local" url http://server_name`

#### QUESTION 10

You are managing a SharePoint website.

You need to add a search service component to the search topology.

Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

	Answer Area
Clone the search topology.	
Run the <b>New-SPEnterpriseSearchServiceApplication</b> Windows PowerShell cmdlet.	
Modify the active search topology.	
Promote the clone topology to active.	
Run the <b>New-SPEnterpriseSearchIndexComponent</b> Windows PowerShell cmdlet.	
Restart the SharePoint Search Application service.	

Correct Answer:

Answer Area	
	Clone the search topology.
	Run the <b>New-SPEnterpriseSearchServiceApplication</b> Windows PowerShell cmdlet.
Modify the active search topology.	Promote the clone topology to active.
Run the <b>New-SPEnterpriseSearchIndexComponent</b> Windows PowerShell cmdlet.	
Restart the SharePoint Search Application service.	

Note:

\* To make any changes to the search topology in a search installation that has items in the search index, you first have to create a new topology object. You modify this new topology object, a clone of the active topology, by adding or removing search components. After you have made the changes to the clone topology object, you make the clone the active topology.

\* SharePoint 2013 uses the web-based interface to show the current status of the topology. You change the topology by using Windows PowerShell.

\* The New-SPEnterpriseSearchServiceApplication adds a search service application to a farm. This cmdlet is used when the search functionality is first configured or when a new shared search application is added to a farm. SPEnterpriseSearchServiceApplication represents a self-contained aggregation of indexed content and properties available for search, and provides an anchor class for setting global search properties. A farm can include multiple search service applications. Reference: Manage search components in SharePoint Server 2013

## QUESTION 11

You have a SharePoint Server 2013 server farm.

The corporate taxonomy contains two term sets named Offices and Cities.

You need to ensure that the terms in the Cities term set can be used by the Offices term set,

What should you use?

- A. query refinement
- B. pinned terms
- C. managed navigation

D. local properties

Correct Answer: B

SharePoint 2013 adds the concept of Pinning to taxonomy and the term store management tool. You might first encounter the option to Pin instead of Reuse on the page to add a catalog connection from cross site publishing or as a new node in the menu for a term in the term store management tool titled "Pin Term With Children." While at least one reason for choosing Pinning is better understood in the context of search driven publishing the tangible difference between the two is actually concise.

The difference is that while Pinning maintains a certain relationship (shared properties) between source term and Reuse instance on a one on one basis as Reuse does, Pinning also updates the hierarchy regarding the removal and addition of terms anywhere within that hierarchy.

---

## QUESTION 12

You need to resolve the authentication issue that occurs in the SharePoint environment.

What should you do?

- A. Use classic mode authentication and set the authentication type to Kerberos.
- B. Deploy the Secure Store Service.
- C. Use the Open Authorization 2.0 (OAuth 2.0) web authorization protocol.
- D. Use the Distributed Cache service.

Correct Answer: D
