Foreword

The Doctoral Course of the Graduate School of Interdisciplinary New Science was opened in April 2007, whereas the Master Course in April 2011. Its aim is to surge ahead in life science and nanotechnology research, creating new interdisciplinary realms. We have organised international symposia and international seminars for young researchers and carried out advanced research on nanoscience/nanotechnology, bioscience/biotechnology and bio-nano fusion in collaboration with the Bio-Nano Electronics Research Centre. In this report, we summarise the achievements in the educational and research programmes during April 2007 – March 2014.

Subjects

We focus on nanoscience and nanotechnology, bioscience and biotechnology and bio-nano fusion research.

Nanoscience and nanotechnology

- (a) Creation of nanostructures via top-down ultra-fine processing, and bottom-up self-organisation and self-assembly
- (b) Development of nanoelectron devices
- (c) Development of nano-thermostatistical mechanics

Bioscience and biotechnology

- (a) Discovery and industrial application of extremophiles
- (b) Applied microbiology
- (c) Applied genome science

Bio-nano fusion

- (a) Analysis of the interactions between biomolecules/cells, and carbon nanostructures such as fullerenes, carbon nanotubes (CNTs) and graphene
- (b) Analysis of the interactions between biomolecules/cells, and nanoparticles such as ferro- and para-magnetic particles
- (c) Development of bio-compatible materials
- (d) Evaluation of the physical properties of biomolecules and cells by nano-micro technologies
- (e) Manipulation of molecules and cells using nanoparticles and CNTs
- (f) Bio-imaging and nano surgery using magnetic nanomaterials such as magnetic nanoparticles, fullerene molecules, CNTs and graphene

Outstanding research projects

We have several research projects carried out in collaboration with the Bio-Nano Electronics Research Centre. A number of advanced researchers are participating in the research projects from both overseas and Japanese research institutions.

- ✓ 21st Century's Centre of Excellence Programme (2003 – 2007)
- ✓ High-Tech Research Centre Programme: phase III (2006 – 2010)
- ✓ Programme for the Strategic Research Foundation at Private Universities (2011 – 2015)
organised by the Ministry of Education, Culture, Sports, Science and Technology (MEXT), Japan

Academic achievements from 2007 to 2013

Bio-nano fusion research

We carried out basic studies on the fusion of bio-nano science and technology as well as individual studies of bioscience and nanotechnology and obtained remarkable results in the field of bio-nano fusion from 2007 to 2013:

1. Analysis of the interactions between biomolecules/cells, and carbon nanostructures
 - (a) Creation of DNA/CNT hybrid structures and quantification of the amount of DNAs adsorbed onto CNTs.
 - (b) Creation of enzyme/CNT hybrid structures and encouragement of the activity of the enzymes.
 - (c) Control of the cell growth using functionalised CNTs.
 - (d) Enhancement of the growth of plant using carbon nanostructures
2. Analysis of the interactions between biomolecules/cells, and magnetic particles
 - (a) Capture of extremophiles by magnetic particles and growth of extremophiles on the magnetic particles.
 - (b) Creation of enzyme/magnetic particle hybrids and control of enzyme reactions
 - (c) Control of the cell growth using functionalised magnetic microparticles.
3. Evaluation of the physical properties of cells by nano/micro technologies.
 - (a) Evaluation of the amount of immunoreactions on the surface of individual cells via the measurement of electrophoretic mobilities in microchannels.
 - (b) Measurement of the mechanical properties of individual cells.
4. Manipulation of molecules and cells using nanoparticles and CNTs.
 - (a) Manipulation of cell/CNT hybrids.
 - (b) Manipulation of cell/magnetic particle hybrids.
 - (c) Bio-imaging using bio-compatible quantum dots.
 - (d) Nano surgery using bio-compatible magnetic nanoparticles.

We found that the activities of enzymes extracted from extremophiles are increased in a wide range of external conditions such as the pH and temperature due to the interactions between the enzymes and carbon nanotubes. We also discovered that the enzyme reactions can be controlled and the intermediate molecules are extracted by enzyme/magnetic particle hybrids. We visualised DNA/CNT and polypeptide/CNT hybrids with transmission electron microscope (TEM), scanning electron microscope (SEM) and atomic force microscope (AFM). We have also developed novel biosensors combining SOI, SOQ and nanotube-electronics and examined the functions of biomolecules and cells by nano/micro electronics and technology. We are now able to perform the manipulation and sorting of living cells, which are labelled by magnetic nanoparticles or CNTs. It is also possible to manipulate cells, which are not labelled by any particles, utilising the magnetic hole effect. We have recently synthesised bio-compatible quantum dots and successfully performed imaging of targeted cells such as cancer cells.

International collaboration

We have encouraged academic interactions between bio-researchers and nano-researchers and between the Graduate School of Interdisciplinary New Science and other research institutions both overseas and in Japan. We exchanged the agreement on collaboration in the development of educational and research programmes with the following institutions and companies:

Institute for Collaborative Biotechnologies
University of California Santa Barbara, USA

School of Pharmacy and Biomolecular Sciences
University of Brighton, UK

Unité de Formation de Recherche
Université Pierre et Marie Curie (Paris 6), France

International activities

We organised 10 international symposia and 34 international seminars, in which doctor course students participated and gave presentations on their latest results. Young researchers discussed their ideas and results with eminent scientists in the fields of nanoscience, bioscience and bio-nano fusion. They also interacted with industrial researchers.

International symposia and forum

Name	The 5 th International Symposium on Bioscience and Nanotechnology
Date	4 th – 5 th December 2007
Place	Prince Hotel Kawagoe, Kawagoe, Saitama, Japan
Co-organisers and supporters	University of California Santa Barbara International Centre for Young Scientists, National Institute for Materials Science French Embassy, British Council, Yomiuri Shimbun
Speakers	Toru Maekawa, Yasuhiko Yoshida, Noriyuki Doukyu, Tatsuro Hanajiri, Izumi Ichinose Sir John Walker, Daniel Morse, Rik Brydson, Nicole Grobert, Raymond Whitby, Michael Kavanaugh, Ian Kinloch, Martin Sagermann, Régine Perzynski, Henry Smith Leonid Kalachev, Stanley Parsons
Poster session	79 presentations
Industrial workshop	4 companies
Number of participants	405
Name	The 1 st International Forum for the Establishment of an International Nanotechnology Innovation Centre
Date	7 th December 2007
Place	Bio-Nano Electronics Research Centre, Toyo University, Kawagoe, Japan
