Activity Hazard Analysis (AHA)

Activity Hazard Analysis (AHA)

AHAs:

- Risk Assessment Tool
- Defines the Activity or Work to be Performed
- Identifies Hazards
- Establishes Controls to Reduce the Hazard to an Acceptable Risk Level
- Living Document
 - Changes with Site Conditions or Operations
 - Changes of competent/qualified personnel

Contractor Required – AHA (New Format)

Activity Hazard Analysis (AHA)

Activity/Work Task: Project Location: Contract Number: Date Prepared:		Overall Risk Assessment Code (RAC) (Use highest code) None

Contractor Required - AHA

➤ EM 385-1-1, para 01.A.13.a: AHAs shall define the activities being performed and identify the work sequences, the specific anticipated hazards, site conditions, equipment, materials and the control measures to be implemented to eliminate or reduce each hazard to an acceptable level of risk.

EM 385-1-1, para 01.A.13.b: Work will not begin until the AHA for the work activity has been accepted by the Government Designated Authority (GDA) and discussed with all engaged in the activity, including the Contractor, subcontractor(s), and Government on-site representative at preparatory and initial control phase meetings.

➤ EM 385-1-1, para 01.A.13.c: Identify the names of the Competent/Qualified person(s) required for a particular activity as specified by OSHA and EM 385-1-1. (i.e., Excavation, Fall Protection, Scaffolding, etc.)

►EM 385-1-1, para 01.A.13.d: AHAs shall be reviewed and modified as necessary to address changing site conditions, operations, or change of competent/qualified personnel. **Living document**

How to Develop Site Specific AHAs - Six Step Process

Step 1:

- Identify: Definable Features of Work
 - Reference
 - Contractor Quality Control Plan
 - Contractor Project Schedule
 - Subcontractors and suppliers working on the project shall also contribute in developing an accurate "Project Schedule".
- Within each "Definable Features of Work" there may be other sub-phases of work to complete the "Definable Features of Work" such as
 - Set-up/Demobilization of office trailers
 - Staging of construction materials
 - Demolition of walls, HVAC systems, etc.
 - Asbestos/Lead abatement activities

Definable Features of Work

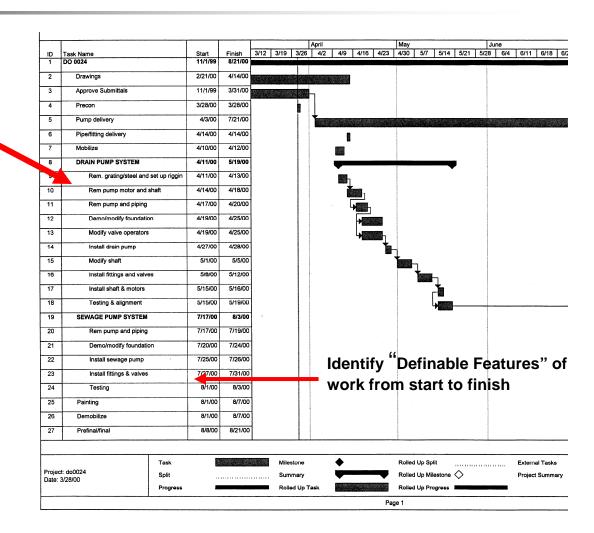

Examples of "Definable Features of Work" from start to finish

Within each "Definable Features of Work" there may be other subphases of work to complete the "Definable Features of Work"

For Example: Mobilization

Sub-phases:

- Placement of project field office
- Utilities tie-in
- Erection of project fencing
- Establishing lay-down areas
- Environmental controls
- Erection of USACE project sign
- •Etc.

Definable Features of Work

List "Definable Features of Work" and sub-phases of work on AHAs under "Job Steps:

For Example:

Mobilization

Placement of project field office

Utilities tie-in

Erection of project fencing

Establishing lay-down areas

Environmental controls

Erection of USACE project sign

Activity Hazard Analysis (AHA) Activity/Work Task: Overall Risk Assessment Code (RAC) (Use highest code) Project Location: Risk Assessment Code (RAC) Matrix Contract Number: Probability Severity Date Prepared: Likely. Occasional Seldom Frequent Unlikely Catastrophic Prepared by (Name/Title): Critical Marginal Reviewed by (Name/Title): Negligible Notes: (Field Notes, Review Comments, etc.) "Probability" is the likelihood to cause an incident, near miss, or accident and identified as: Frequent, Likely, Occasional, Seldom or Unlikely. "Severity" is the outcome/degree if an incident, near miss, or accident did occur and identified as: Catastrophic, Critical, Marginal, or Negligible E = Extremely High Risk H = High Risk Step 2: Identify the RAC (Probability/Severity) as E. H. M. or L. for each M = Moderate Risk "Hazard" on AHA. Annotate the overall highest RAC at the top of AHA. L = Low Risk Job Steps Hazards RAC Training Requirements/Competent or Equipment to be Used Inspection Requirements Qualified Personnel name(s)

Hazards

Step 2:

- Identify: Recognized or anticipated hazards for each definable and/or sub-phases of work
 - Ask yourself the following to help identify hazards (not all inclusive):
 - Is there a danger of the employee of being struck by something (falling objects, moving equipment, etc.) from above, side, behind or in front?
 - Can the employee slip or trip?
 - Can the employee be caught in or between objects, machinery, collapsing walls, confined space, etc.?
 - Strains or sprains?
 - Electrical shock?
 - Can the employee fall from same or different levels?
 - Can employee or equipment come into contact with overhead lines or underground utilities?
 - Can employee be exposed to hazardous environments or chemicals?
 - Utilize past experiences, Lessons Learned, After Action Reports, Accident Trends, common sense, etc. to help identify hazards

List "Hazards" on the AHAs under "Ha:

Examples of Hazards (not all inclusive)::

Struck By

Struck by Falling Object

Struck Against

Fall on Same Level

Fall on Different Level

Slipped/ Tripped (No fall)

Punctured By

Laceration

Caught On

Caught By

Caught Between

Lifted, Strained by (Single Action)

Contacted by (Object was moving)

Electric Shock

Impaled

Downing

Oxygen Deficient Atmosphere

Exposed To

Stung By

Equipment Failure

Equipment Rollover

Fire

Cave-In

Activity Hazard Analysis (AHA)

Activity/Work Task:		Overall Risk Assessment Code (RAC) (Use highest code) None					
Project Location:		Risk Assessment Code (RAC) Matrix					
Contract Number: Date Prepared:		Carrenter	Probability				
		Severity	Frequent	Likely.	Occasion	nal Seldom	Unlikely
Prepared by (Name/Title): Reviews: by (Name/Title):		Catastrophic	E	E	Н	Н	M
		Critical	E	Н	Н	M	L
		Marginal	н	M	M	L	L
		Negligible	M	L	L	L	L
Notes: (Field Notes, Teview Comments, etc.)		Step 1: Review each "Hazard" wi	ith identified safety	"Controls" a	nd determine F	AC (See above)	
		"Probability" is the likelihood to cause an incident, near miss, or accident and identified as: Frequent, Likely, Occasional, Seldom or Unlikely.				RAC	Chart
		"Severity" is the outcome/degree if an incident, near miss, or accident did occur and identified as: Catastrophic, Critical, Marginal, or Negligible H = High Risi					
		Step 2: Identify the RAC (Probability/Severity) as E, H, M, or L for each "Hazard" on AHA. Annotate the overall highest RAC at the top of AHA. L = Low Risk					
Job Steps	Hazards	Controls			RAC		
Equipment to be Used		ements/Competent or ersonnel name(s)		Inspecti	on Requi	rements	
					R)		

Controls

Step 3:

- Identify: Site specific control measures to eliminate or reduce each hazard to an acceptable risk level
 - Ask yourself the following (not all inclusive):
 - How can the working condition or process be changed?
 - Can the hazard be eliminated with engineering controls?
 - What type of PPE can we use?
 - Can the hazard be eliminated with administrative controls?
 - What can the employee do to prevent an accident or eliminate the hazard?
- Utilize past experiences, Lessons Learned, After Action Reports, Accident Trends, common sense, etc. to help formulate control measures.
- GOAL: Reduce each Hazard to Acceptable Risk Level

Controls

Job Steps	Hazards	Controls	RAC
Mobilization:			
Project field office placement	Stuck by moving equipment	Wear reflective vests. Establish "No Zone" with flagging or barrier tape. Authorized personnel only! Back up alarms. Operators maintain eye contact with spotters at all times.	
Utilities tie-in	Fall from elevated heights	Provide ladder for safe access to roof. Personnel shall wear full body harness with lanyard. Install manufacture approved anchor point at least 6 ft (1.8 m) from the roof line. 100 percent tie-off at all times.	

Competent/Qualified Personnel

Step 4:

- Identify: Names of the Competent or Qualified Personnel required for the activity or job step
 - Reference
 - EM 385-1-1
 - OSHA
 - Proof of competency/qualification shall be submitted to the GDA for acceptance prior to start of work
 - Attached competency/qualification documentation to AHA
 - Examples of Competent/Qualified Personnel
 - Excavation
 - Scaffolding
 - First Aid/CPR
 - Electrical
 - Confined Space

Competent/ Qualified Personnel

- Names of the Competent or Qualified Personnel required for the activity or job step
- Reference

EM 385-1-1 OSHA

 Attached competency/qualification documentation to AHA

ctivity/Work Task:		Overall Risk Asses	ssment Code	(RAC)	(Use highe	st code)	None
Project Location:		Risk Assessment Code (RAC) Matrix					
Contract Number: Date Prepared: Prepared by (Name/Title):		Probability			tv		
		Severity	Frequent	Likely.	Occasiona		Unlikely
		Catastrophic	E	E	н	Н	M
		Critical	E	Н	Н	M	L
Reviewed by (Name/Title):		Marginal	н	M	M	L	L
		Negligible	М	L	L	L	L
otes: (Field Notes, Review Comments, etc.)		Step 1: Review each "Hazard" with	h identified safety "	Controls" ar	nd determine RA	C (See above)	
		"Probability" is the likelihood to ca identified as: Frequent, Likely, Occ	ause an incident, ne asional, Seldom or	ar miss, or a Unlikely.	ccident and	RAC	Chart
<i>8</i> :		"Severity" is the outcome/degree if an incident, near miss, or accident did E = Extr			E = Extremely H = High Risk	remely High Risk h Risk	
		Step 2: Identify the RAC (Probability/Severity) as E, H, M, or		, M, or L for	each	M = Moderate Risk	
Job Steps	Hazards	"Hazard" on AHA. Annotate the overall highest RAC a		at the top of AHA.		L = Low Risk	RAC
				o			

Step 5:

- Identify: Risk Assessment Code (RAC)
- Review each "Hazard" for "Probability" and
 "Severity" per Risk Assessment Code Matrix chart
 - Probability: Likelihood of the hazard to cause a incident, near miss, or accident
 - Frequent Occurs very often, known to happen regularly
 - Likely Occurs several times, a common occurrence
 - Occasional Occurs sporadically, but is not uncommon
 - Seldom Remotely possible, could occur at some time
 - Unlikely Can assume will not occur, but not impossible

Step 5 con't:

- Severity: Outcome/degree of the incident, near miss, or accident
 - Catastrophic Death or permanent total disability; Major property damage
 - Critical Permanent partial disability or temporary total disability; Extensive damage to equipment or systems
 - Marginal Lost workdays due to injury or illness; Minor damage to equipment or systems, property, or the environment
 - Negligible First aid or minor medical treatment; Slight equipment or system damage, but fully functional or serviceable; Little or no property or environmental damage

Step 5 con't:

- Ask yourself: How often (probability) will this hazard result in a incident, near miss, or accident?
 - For Example:
 - Employee falling from roof or elevated heights (Hazard)
 - Probability: Occasional
- Ask yourself: What will be the outcome or degree (severity) of injury or property damage if the incident, near miss, or accident did occur on site?
 - For Example:
 - Broken arm or leg with lost time (outcome or degree)
 - Severity: Marginal
- Review "Risk Assessment Code (RAC) Matrix" chart to determine Risk Assessment Code (RAC) as E, H, M, or L
- RAC: M (Moderate Risk)

ctivity Hazard Analysis (AHA) Overall Risk Assessment Code (RAC) (Use highest code) Non Risk Assessment Code (RAC) Matrix Probability Severity Frequent Occasional | Seldom Unlikely Catastrophic E Critical E Н Marginal Н M М Step 1: Review each "Hazard" with identified safety "Controls" and determine RAC (See above) "Probability" is the likelihood to cause an incident, near miss, or accident and **RAC Chart** identified as: Frequent, Likely, Occasional, Seldom or Unlikely. E = Extremely High Risk e if an incident, near miss, or accident did **Severity: Marginal** phic, Critical, Marginal, or Negligible H = High Risk bility/Severity) as E, H, M, or L for each M = Moderate Risk Annotate the overall highest RAC at the top of AHA. L = Low Risk Hazards Controls RAC M

Probability: Occasional

Risk Assessment Code (RAC)

- Moderate Risk (M)
- Identify (M) as RAC for the hazard on AHA
- Repeat RAC process for each hazard

Job Steps	Hazards	Controls	RAC
Mobilization: Project field office placement	Stuck by moving equipment	Wear reflective vests. Establish "No Zone" with flagging or barrier tape. Authorized personnel only! Back up alarms. Operators maintain eye contact with spotters at all times.	L
	Fall from elevated heights	Provide ladder for safe access to roof. Personnel shall wear full body harness with lanyard. Install manufacture approved anchor point at least 6 ft (1.8 m) from the roof line. 100 percent tie-off at all times.	M

Most RACs will be (M) or (L) after safety controls have been identified, but some RACs may be classified as (H) or (E) after safety controls have been identified. See next slide.

Step 5 con't

- RACs that are E (Extremely High Risk) or H (High Risk) after safety controls
 - Contact ET, CME, AROICC and FEC Safety Office (QA, PE, or RE to include CEPOJ-SO for CoE) for assistance
 - Potential E or H activities or job steps
 - Contractor diving operations
 - Entry into Permit Required Confined Spaces
 - Hot Work on or around fuel systems
 - Critical lift crane ops
 - Review and approval from CI5, PAC Safety, A/E, PM,
 (Construction Chief, AE, E&C Chief, PPMD Chief, AE, SO Chief, DD, or DE for CoE) (when necessary)

Job Steps	Hazards	Controls	RAC
Mechanical Works			
Installation of new 200 ton HVAC cooling tower	Loss of load during crane lift	Develop critical lift plan IAW EM 385-1-1, para 16.H. Submit critical lift plan to GDA for acceptance and review plan with all involved with the lift. Inspect rigging. Detail rigging plan Verify wind speed prior to lift Inspect crane prior to use Load test crane	Н

RACs classified as (H) or (E) after identifying safety controls may require additional review and acceptance from Field Office, SO, or Command group leaders. Seek guidance or instruction from GDA before start of work.

Equipment, Training, and Inspection

Step 6:

- Identify: Equipment to be Used, Training Requirements, and Inspection Requirements
 - Reference:
 - EM 385-1-1
 - OSHA 29 CFR 1926
 - Manufacture Instructions/Recommendations (Operator Manual)
 - Industry Practices
 - Utilize past experiences, Lessons Learned, After Action Reports, Accident Trends, common sense, etc.
 - Communicate with subcontractors, suppliers, etc.

Equipment, Training, and Inspection

Equipment to be Used	Training Requirements	Inspection Requirements
Excavator Generator Scaffolding (Frame or Tube Clamp?) Full body Harness with Lanyard Portable Toilets 5 Ma GFCI Power Cord Sets Crane First Aid Kit Safety Shoes Safety Glasses Hardhat Respiratory Protection Fire Extinguisher	30 OSHA Construction Safety Indoctrination Training First Aid/CPR Fall Protection Daily Tool Box Meetings (Japan) Weekly/Monthly Safety Training Respirator Emergency Response Procedures Qualified Crane Operator Qualified Heave Equipment Operator Qualified Electricians Qualified Scaffold Erectors	SSHO/QC Daily Site Inspections Scaffolding Shoring Systems for Excavation Monthly First Aid Kits Fall Protection PPE and Anchors All Heavy Equipment Power Cord Sets (Daily) GFCIs (at least Monthly) Grounding (Monthly)

Conclusion

- Construction work is inherently dangerous
- AHAs are a risk management tool to help identify hazards or risks and formulate controls to reduce the hazard to an acceptable risk level
- Communicate with subcontractors, suppliers, PWD/ROICC field office personnel, etc. when developing AHAs
- AHAs shall be reviewed and modified as necessary to address changing site conditions, operations, or changes of competent/qualified personnel
- Contact Safety Office for assistance
- Safety requires a TEAM EFFORT!
