

Adapting
Health Professions
Education
for the future:
What will we need
humans for?

Brian Hodges MD, PhD

@BDHodges1

As we think about the future of professional education, what capabilities will be needed...

...that human professionals can bring

Suskind and Suskind

HIDDEN FIGURES

*Dorothy
Vaughan 1910-
2008*

Learning from Dorothy Vaughan: artificial intelligence and the health professions

Brian D Hodges 

Medical Education 2017

The imminent arrival of artificial intelligence, deep learning and forms of automation such as robotics are about to transform health care and education, just as powerfully as the arrival of machine computing at NASA

Though it has been said that 47% of jobs will disappear it is more likely that AI and automation will displace workers to new roles, rather than replacing them outright

Issue 1: Meta- cognition

Esteva et al. Nature 2017

Gulshan et al JAMA 2016

Predicting Clinical Outcomes

- AI system given: MRI scans, cardiac cath tests, stress tests & blood results for 256 patients
- AI system 'read' 8 years of patient health records:
- AI learned which abnormalities predicted when patients would die
- AI correctly predicted one year survival 80% of the time
- (The figure for doctors was 60%)

Cognitive Competence for the Future

- Knowledge will be largely held externally (cloud)
- Excessive memorization wastes cognitive resource
- Health professionals must invest in understanding the strengths & blind spots of human cognition

How can we adapt
education for
metacognition?

Curriculum Based on Metacognition?

- Vanderbilt University College Colloquium
 - “meta-cognition as a foundation for professionalism and empathy”
- Goals:
 - Understand one’s own habits and patterns of thinking and emotion
 - Gain humbling appreciation of fallibility of cognition
 - Appreciate complex interplay of cognition and emotion

Thinking about Thinking and Emotion: The Metacognitive Approach
to the Medical Humanities that Integrates the Humanities with
the Basic and Clinical Sciences
Quentin Eichbaum 2014

Issue 2: Human-Machine Interaction

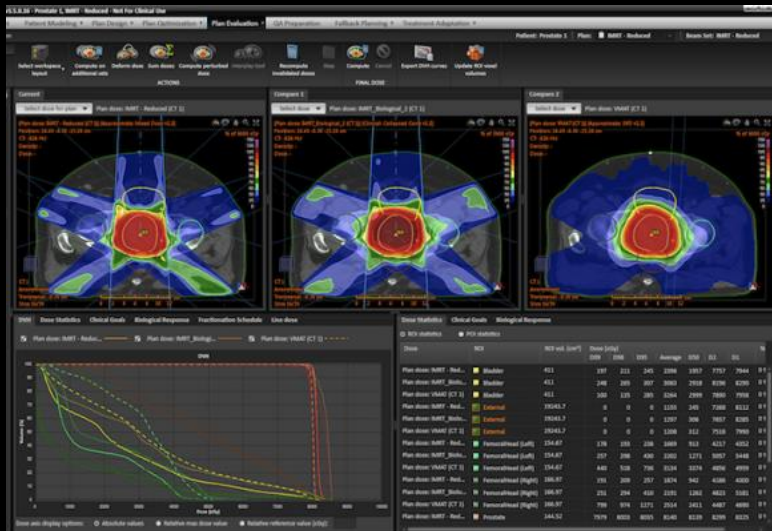

*Human health professionals
will collaborate with
machines*

AI for Radiation Therapy Treatment Planning at Princess Margaret Cancer Centre, Toronto:

- From 3 hours to 4 minutes per patient

Human(e)-Machine Interaction

- Ensuring empathy is conveyed (including by technologies) to patients and other staff
- Emergent failures of human-computer communication

Tech Rage

“Voice assistants behind a generation of rude kids,
artificial intelligence authorities say”

Jennifer Dudley-Nicholson, News Corp Australia Network
March 10, 2017

Human-Machine Collaboration 1.0

The Human-Machine Interface

- Melding human psychomotor skills with machine guidance
- Emotional regulation
 - Understanding machine function and failure
 - Performing under pressure
 - Etiquette

Issue 3:
Analogue and Digital
Empathy

Digitizing ~~Dehumanizing~~ Humans

A woman with brown hair is wearing a white mesh face mask. The mask covers her face from the forehead to the chin, leaving only her eyes visible. There are blue markings on the mask: a vertical line on the forehead, a circular target-like symbol on the bridge of her nose, and another vertical line on the chin. A blue headband is visible at the top. The background is dark. The text "Look in my eyes...be present for me" is overlaid at the bottom.

Look in my eyes...be present for me

BURNOUT

*How can we
healthcare to
ensure*
**HUMAN
PRESENCE?**

21st Century **Human** Competence

Metacognition

Ability to Collaborate Safely with Automated Systems

Critical Thinking &
Advocacy for Humane Institutions

Caring, Compassion & Human Presence
(Including Machine-Human Relationships)

Why ask the question

*“What will we need humans for in
healthcare”?*

Because now, we have competition

An **online webinar series** highlighting key considerations, trends and discourses emerging as a result of the vast changes in the digital landscape as industries - including health care - trend toward mainstream use of artificial intelligence.

In this series, expert clinicians, researchers, educators and hospital administrators will highlight key questions and challenges facing health care at the intersections of patient safety, interprofessional education, data and digital literacy, and communications within health care teams and with patients and caregivers.

Coming soon....

***Without Compassion
There is No Health Care***

*A book about
Technology and the Future of
Healthcare*

Thank you
