Contents

<i>Contributor contact details</i>	<i>ix</i>
1 Introduction: advanced materials and vehicle lightweighting J. ROWE, Automotive Consultant Engineer, UK	1
1.1 References	3
2 Advanced materials for automotive applications: an overview P. K. MALLICK, University of Michigan – Dearborn, USA	5
2.1 Introduction	5
2.2 Steels	8
2.3 Light alloys	12
2.4 Stainless steels	17
2.5 Cast iron	18
2.6 Composite materials	19
2.7 Glazing materials	25
2.8 Conclusions	26
2.9 References	26
3 Advanced metal-forming technologies for automotive applications N. DEN UIJL and L. CARLESS, Tata Steel RD&T, The Netherlands	28
3.1 Formability	28
3.2 Forming technology	38
3.3 Modelling	49
3.4 Economic considerations	52
3.5 Bibliography	55

vi	Contents	
4	Nanostructured steel for automotive body structures Y. OKITSU, Honda R&D Co. Ltd, Japan and N. TSUJI, Kyoto University, Japan	57
4.1	Introduction	57
4.2	Potential demand for nanostructured steels for automotive body structures	58
4.3	Fabricating nanostructured low-C steel sheets	59
4.4	Improving elongation in nanostructured steel sheets	69
4.5	Crash-worthiness of nanostructured steel sheets	76
4.6	Conclusions	81
4.7	References	82
4.8	Appendix	83
5	Aluminium sheet for automotive applications M. BLOECK, Novelis Switzerland SA, Switzerland	85
5.1	Introduction	85
5.2	Sheet alloys for outer applications	86
5.3	Sheet alloys for inner closure panels and structural applications	91
5.4	Fusion alloys	96
5.5	Surface treatment of the aluminium strip	98
5.6	Future trends	107
5.7	References	108
6	High-pressure die-cast (HPDC) aluminium alloys for automotive applications F. CASAROTTO, A. J. FRANKE and R. FRANKE, Rheinfelden Alloys GmbH & Co. KG, Germany	109
6.1	Introduction	109
6.2	AlSi heat-treatable alloys – Silafont [®] -36	114
6.3	AlMg non heat-treatable alloys – Magsimal [®] -59	126
6.4	AlSi non heat-treatable alloys – Castasil [®] -37	139
6.5	Automotive trends in die-casting	147
6.6	References	148
7	Magnesium alloys for lightweight powertrains and automotive bodies B. R. POWELL and A. A. LUO, General Motors Global Research and Development Center, USA and P. E. KRAJEWSKI, General Motors Global Vehicle Engineering, USA	150
7.1	Introduction	150
7.2	Cast magnesium	157
7.3	Sheet magnesium	178

7.4	Extruded magnesium	191
7.5	Future trends	200
7.6	Acknowledgements	204
7.7	References	205
8	Polymer and composite moulding technologies for automotive applications P. MITSCHANG and K. HILDEBRANDT, Institut für Verbundwerkstoffe GmbH, Germany	210
8.1	Introduction	210
8.2	Polymeric materials used in the automotive industry	211
8.3	Composite processing procedures	214
8.4	Fields of application for fibre-reinforced polymer composites (FRPCs)	218
8.5	Further challenges for composites in the automotive industry	227
8.6	References	228
9	Advanced automotive body structures and closures P. URBAN and R. WOHLECKER, Forschungsgesellschaft Kraftfahrwesen mbH Aachen, Germany	230
9.1	Current technology, applications and vehicles	230
9.2	Key factors driving change and improvements	238
9.3	Trends in material usage	242
9.4	Latest technologies	249
9.5	References	252
10	Advanced materials and technologies for reducing noise, vibration and harshness (NVH) in automobiles T. BEIN, J. BÖS, D. MAYER and T. MELZ, Fraunhofer Institute for Structural Durability and System Reliability LBF, Germany	254
10.1	Introduction	254
10.2	General noise, vibration and harshness (NVH) abatement measures	260
10.3	Selected concepts for noise, vibration and harshness (NVH) control	267
10.4	Applications	285
10.5	Conclusions	295
10.6	Acknowledgements	296
10.7	References	296

viii	Contents	
11	Recycling of materials in automotive engineering K. KIRWAN and B. M. WOOD, WMG, University of Warwick, UK	299
11.1	End of life vehicles (ELVs)	299
11.2	Reuse, recycle or recover?	303
11.3	Environmental impact assessment tools	308
11.4	Case study: the WorldF3rst racing car	310
11.5	Conclusions	311
11.6	References	313
12	Joining technologies for automotive components F. M. DE WIT and J. A. POULIS, Delft University of Technology, The Netherlands	315
12.1	Introduction	315
12.2	Types of advanced structural materials in cars	316
12.3	Factors affecting the selection of joining methods	319
12.4	Joint design and joint surfaces	320
12.5	Laser beam welding(LBW) and brazing/soldering	322
12.6	Adhesive bonding	323
12.7	Mechanical joints	324
12.8	Hybrid joining methods	324
12.9	The effect of volume on joining technology	327
12.10	Future trends	328
12.11	References	329
