

MedDRA

Medical Dictionary
for Regulatory Activities

Advanced MedDRA Coding

Instructor's Name

Webinar Date

MedDRA was developed under the auspices of the International Council for Harmonisation of Technical Requirements for Pharmaceuticals for Human Use (ICH). The activities of the MedDRA Maintenance and Support Services Organization (MSSO) are overseen by an ICH MedDRA Management Committee, which is composed of the ICH parties, the Medicines and Healthcare products Regulatory Agency (MHRA) of the UK, Health Canada, and the WHO (as Observer).

MedDRA

Course Overview

- Discuss advanced principles in the MedDRA Term Selection: Points to Consider (MTS:PTC) document
- Discuss MedDRA Concept Descriptions
- Show several examples of proper coding of advanced principles
- Use browser and polling application to test your understanding of advanced coding principles
- Present some MedDRA coding “pearls”
- Conclude with a question and answer session

Get ready to participate !

1. Open an internet browser on your computer or cell phone
2. Go to **PollEv.com**

3. Enter **XXXXXXXXXX** as the "username"
4. Click **Join**

5. Click **Skip**
6. Respond to activity

MedDRA

Instructors should insert slide with a screenshot of their QR code

MedDRA® trademark is registered by ICH

- Provides term selection advice for industry and regulatory purposes
- Objective is to promote accurate and consistent term selection to facilitate common understanding of shared data
- Recommended to be used as basis for individual organization's own coding conventions

MedDRA Term Selection: PTC (cont)

- Developed by a working group of the ICH Management Committee
- Updated annually in March
- Complete versions available in
 - English, Japanese, Chinese, Korean, Spanish, and Russian
- Condensed versions available for other MedDRA languages
- Available on MedDRA and JMO websites

- Diagnoses and Provisional Diagnoses with or without Signs and Symptoms
- Death and Other Patient Outcomes
- Suicide and Self-Harm
- Conflicting/Ambiguous/Vague Information
- Combination Terms
- Age vs. Event Specificity
- Body Site vs. Event Specificity
- Location-Specific vs. Microorganism-Specific Infection
- Modification of Pre-existing Conditions
- Exposures During Pregnancy and Breast Feeding
- Congenital Terms
- Neoplasms
- Medical and Surgical Procedures
- Investigations

Term Selection Points

Section 3

- Medication Errors, Accidental Exposures and Occupational Exposures
- Misuse, Abuse and Addiction
- Transmission of Infectious Agent via Product
- Overdose, Toxicity and Poisoning
- Device-related Terms
- Drug Interactions
- No Adverse Effect and “Normal” Terms
- Unexpected Therapeutic Effect
- Modification of Effect
- Social Circumstances
- Medical and Social History
- Indication for Product Use
- Off Label Use
- Product Quality Issues

General Principles

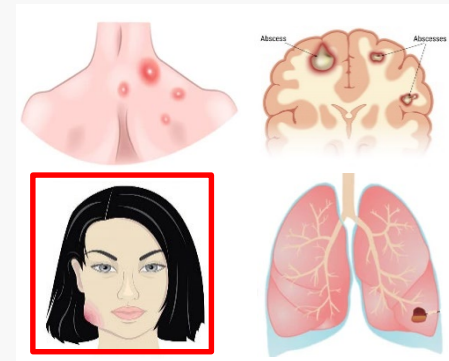

- Always Select a Lowest Level Term
Select Only Current LLTs

✓ Select the Lowest Level Term that most accurately reflects the reported verbatim information

"Abscess on face"

→ Do not simply select LLT *Abscess*

→ Select a term with greater specificity **LLT *Facial abscess***

- ✓ Select current LLTs only
 - Non-current terms for legacy conversion/historical purposes

General Principles

- Selecting More Than One Term

- ✓ Can select more than one LLT to represent reported information.
 - Selecting one term may lead to loss of specificity
 - Selecting more than one term may lead to redundant counts

Document your procedures!

Report:
"Metastatic
gingival cancer"

Select LLT Gingival cancer **OR** LLT
Metastatic carcinoma

Select LLT Gingival cancer **AND** LLT
Metastatic carcinoma

General Principles

- Check the Hierarchy

- ✓ Check the hierarchy above a selected LLT (PT, HLT, HLGT, SOC) to ensure placement accurately reflects meaning of reported term

You need to code a report of “low energy” but don’t see an exact match in MedDRA.

You decide to use LLT *Worn out*.

You check the PT above this LLT and see that it is “Fatigue”. You are now more comfortable about the LLT you selected.

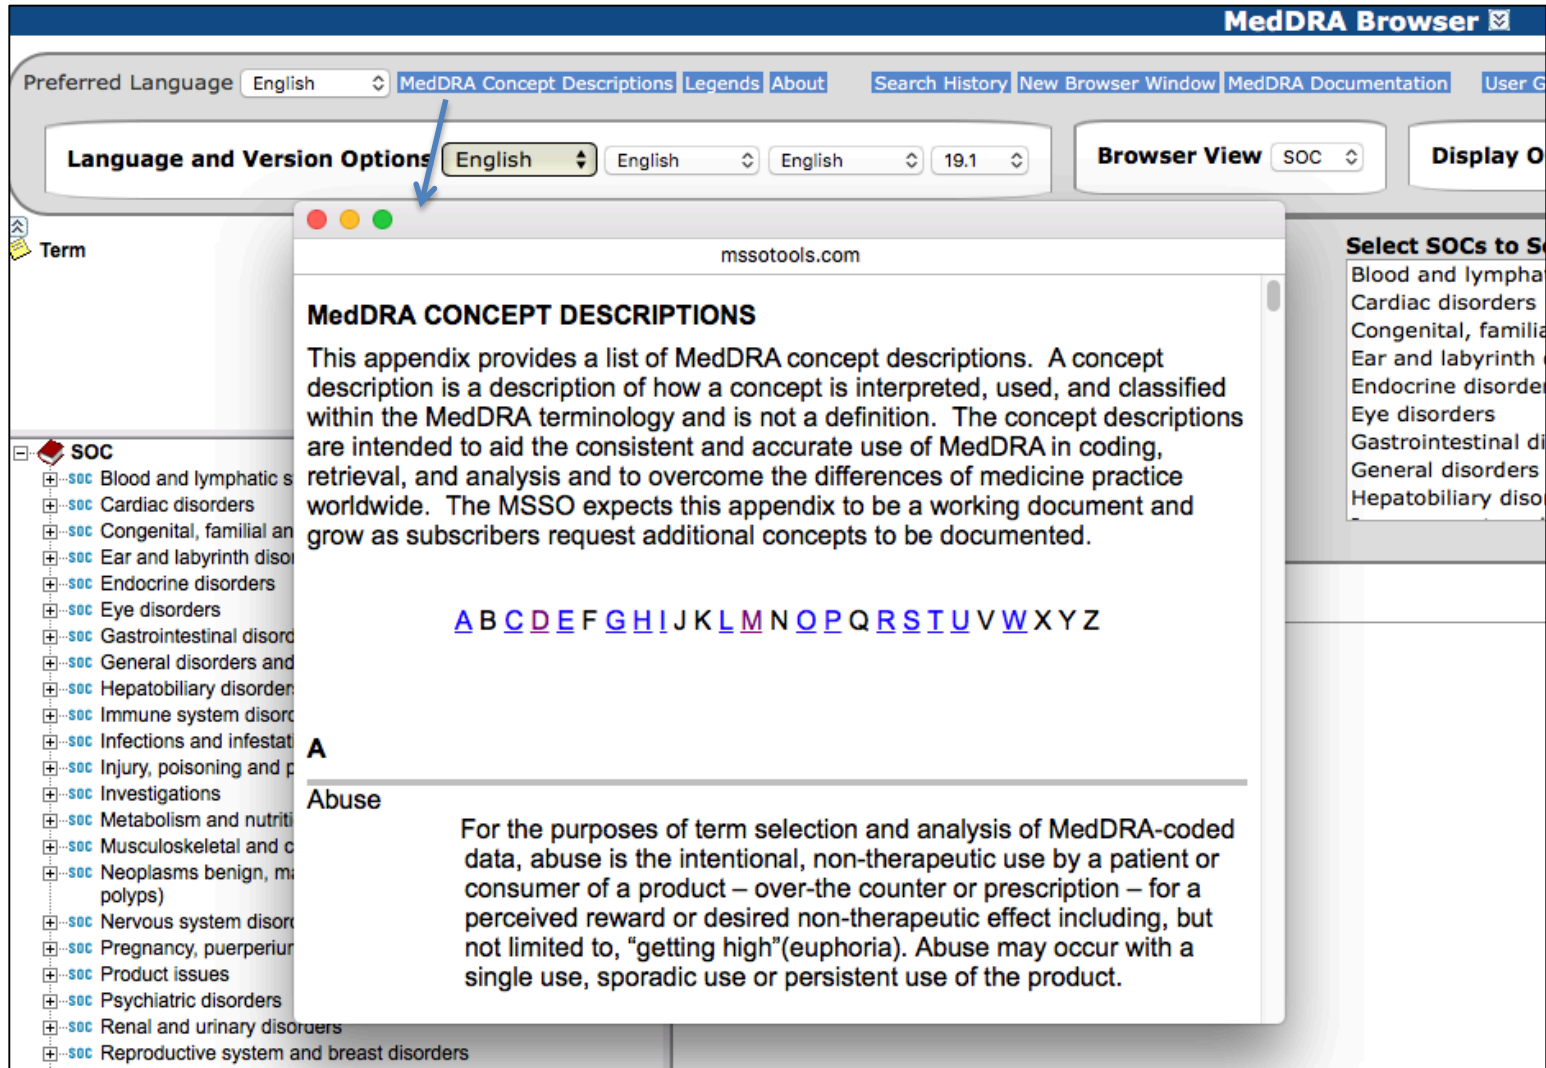

MedDRA

Concept Descriptions

- Descriptions of how a concept is interpreted, used, and classified in MedDRA
- Not a definition
- Intended to aid accurate and consistent use of MedDRA
- Overcome differences in medical practice worldwide
- Accessible in MSSO's browsers

Concept Descriptions (cont)

The screenshot shows the MedDRA Browser interface. At the top, there is a navigation bar with 'MedDRA Concept Descriptions' selected. Below it, a 'Language and Version Options' section shows 'English' selected for the preferred language. A blue arrow points to this section. The main content area displays 'MedDRA CONCEPT DESCRIPTIONS' for the term 'Abuse'. The text explains that concept descriptions are used to aid in the consistent and accurate use of MedDRA in coding, retrieval, and analysis. Below the text is an alphabetical index with 'A' selected, and the word 'Abuse' is highlighted. The definition of 'Abuse' is provided: 'For the purposes of term selection and analysis of MedDRA-coded data, abuse is the intentional, non-therapeutic use by a patient or consumer of a product – over-the counter or prescription – for a perceived reward or desired non-therapeutic effect including, but not limited to, “getting high”(euphoria). Abuse may occur with a single use, sporadic use or persistent use of the product.'

MedDRA CONCEPT DESCRIPTIONS

This appendix provides a list of MedDRA concept descriptions. A concept description is a description of how a concept is interpreted, used, and classified within the MedDRA terminology and is not a definition. The concept descriptions are intended to aid the consistent and accurate use of MedDRA in coding, retrieval, and analysis and to overcome the differences of medicine practice worldwide. The MSSO expects this appendix to be a working document and grow as subscribers request additional concepts to be documented.

[A](#) [B](#) [C](#) [D](#) [E](#) [F](#) [G](#) [H](#) [I](#) [J](#) [K](#) [L](#) [M](#) [N](#) [O](#) [P](#) [Q](#) [R](#) [S](#) [T](#) [U](#) [V](#) [W](#) [X](#) [Y](#) [Z](#)

A

Abuse

For the purposes of term selection and analysis of MedDRA-coded data, abuse is the intentional, non-therapeutic use by a patient or consumer of a product – over-the counter or prescription – for a perceived reward or desired non-therapeutic effect including, but not limited to, “getting high”(euphoria). Abuse may occur with a single use, sporadic use or persistent use of the product.

MedDRA

Advanced Principles in MedDRA Term Selection: Points to Consider Document

Diagnoses and Provisional Diagnoses

SINGLE DIAGNOSIS	
DEFINITIVE DIAGNOSIS	PROVISIONAL DIAGNOSIS
<p>Single diagnosis without signs and symptoms</p> <ul style="list-style-type: none"> •Diagnosis (only possible option) 	<p>Single provisional diagnosis without signs and symptoms</p> <ul style="list-style-type: none"> •Provisional diagnosis (only possible option)
<p>Example: “<i>Myocardial infarction</i>” → select “<i>Myocardial infarction</i>”</p>	<p>Example: “<i>Possible myocardial infarction</i>” → select “<i>Myocardial infarction</i>” (select term as if definitive diagnosis)</p>

Similar principles apply for multiple diagnoses

Diagnoses and Provisional Diagnoses (cont)

SINGLE DIAGNOSIS	
DEFINITIVE DIAGNOSIS	PROVISIONAL DIAGNOSIS
<p>Single diagnosis with signs/symptoms</p> <ul style="list-style-type: none"> •Preferred: Diagnosis only 	<p>Single provisional diagnosis with signs/symptoms</p> <ul style="list-style-type: none"> •Preferred: Provisional diagnosis and signs/symptoms
<p>Example: <i>“Anaphylactic reaction with rash, dyspnoea, hypotension, and laryngospasm”</i> → select <i>“Anaphylactic reaction”</i></p>	<p>Example: <i>“Possible myocardial infarction with chest pain, dyspnoea, diaphoresis”</i> → select <i>“Myocardial infarction”</i>, <i>“Chest pain”</i>, <i>“Dyspnoea”</i>, and <i>“Diaphoresis”</i></p>

Diagnoses and Provisional Diagnoses (cont)

SINGLE DIAGNOSIS	
DEFINITIVE DIAGNOSIS	PROVISIONAL DIAGNOSIS
<p>Single diagnosis with signs/symptoms</p> <ul style="list-style-type: none"> •Alternate: Diagnosis and signs/symptoms 	<p>Single provisional diagnosis with signs/symptoms</p> <ul style="list-style-type: none"> •Alternate: Signs/symptoms only (as provisional diagnosis may change)
<p>Example: <i>“Anaphylactic reaction with rash, dyspnoea, hypotension, and laryngospasm”</i> → select <i>“Anaphylactic reaction”, “Rash”, “Dyspnoea”, Hypotension”, and “Laryngospasm”</i></p>	<p>Example: <i>“Possible myocardial infarction with chest pain, dyspnoea, diaphoresis”</i> → select <i>“Chest pain”, “Dyspnoea”, and “Diaphoresis”</i></p>

Similar principles apply for multiple diagnoses

Diagnoses and Provisional Diagnoses (cont)

- Always include signs/symptoms not associated with diagnosis

Reported	LLT Selected
Myocardial infarction, chest pain, dyspnoea, diaphoresis, ECG changes and jaundice	Myocardial infarction Jaundice (note that jaundice is not typically associated with myocardial infarction)

What Terms to Select?

- Sepsis leading to shock from possible spontaneous bacterial peritonitis or bowel perforation

Sepsis

Shock

Septic shock

Spontaneous bacterial peritonitis

Bowel perforation

Conflicting/Ambiguous Information

- First, try to obtain more specific information

Reported	LLT Selected	Comment
Hyperkalaemia with a serum potassium of 1.6 mEq/L	Serum potassium abnormal	LLT <i>Serum potassium abnormal</i> covers both of the reported concepts (note: serum potassium of 1.6 mEq/L is a low result, not high)
GU pain	Pain	“GU” could be either “genito-urinary” or “gastric ulcer”. If additional information is not available, then select a term to reflect the information that is known, i.e., LLT <i>Pain</i>

Vague Information

- First, try to obtain more specific information

Reported	LLT Selected	Comment
Turned green	Unevaluable event	“Turned green” reported alone is vague; this could refer to a patient condition or even to a product (e.g., pills)
Patient had a medical problem of unclear type	Ill-defined disorder	Since it is known that there is some form of a medical disorder, LLT <i>Ill-defined disorder</i> can be selected

What Terms to Select?

- Clinical complication of IUD

IUD complication (PT Complication associated with device)
Intra-uterine death (PT Foetal death)
Unevaluable event

- Hypoglycemia (blood glucose = 200 mg/dL)

Blood glucose abnormal
Blood glucose increased
Hypoglycemia

Investigations

- Medical condition vs. investigation result

Reported	LLT Selected	Comment
Hypoglycaemia	Hypoglycaemia	LLT <i>Hypoglycaemia</i> links to SOC <i>Metabolism and nutrition disorders</i>
Decreased glucose	Glucose decreased	LLT <i>Glucose decreased</i> links to SOC <i>Investigations</i>

Investigations (cont)

- Unambiguous investigation result

Reported	LLT Selected	Comment
Glucose 40 mg/dL	Glucose low	Glucose is clearly below the reference range

- Ambiguous investigation result

Reported	LLT Selected	Comment
His glucose was 40	Glucose abnormal	No units have been reported. Select LLT <i>Glucose abnormal</i> if clarification cannot be obtained.

Investigations (cont)

- Investigation results consistent with diagnosis

Reported	LLT Selected	Comment
Elevated potassium, K 7.0 mmol/L, and hyperkalaemia	Hyperkalaemia	It is not necessary to select LLT <i>Potassium increased</i>

- Grouped investigation result terms

Reported	LLT Selected	Comment
Increased alkaline phosphatase, increased SGPT, increased SGOT and elevated LDH	Alkaline phosphatase increased SGPT increased SGOT increased LDH increased	Select four individual terms. A single term such as LLT <i>Liver function tests abnormal</i> should not be selected.

What Terms to Select?

- Testing showed increased serum creatinine and BUN, with increased BUN/creatinine ratio

Increased serum creatinine

BUN increased

Blood urea nitrogen/creatinine ratio increased

Renal function tests NOS abnormal

- Patient had features of aldosterone excess

Aldosterone increased

Aldosteronism

Blood aldosterone abnormal

Combination Terms

- One condition is more specific than the other

Reported	LLT Selected
Arrhythmia due to atrial fibrillation	Atrial fibrillation
Hepatic function disorder (acute hepatitis)	Hepatitis acute

- A MedDRA combination term is available

Reported	LLT Selected
Retinopathy due to diabetes	Diabetic retinopathy
Rash with itching	Itchy rash
Breast cancer (HER2 positive)	HER2 positive breast cancer

Combination Terms (cont)

- If splitting provides more clinical information, select more than one term
- In all cases of combination terms, apply medical judgment

Reported	LLT Selected
Diarrhoea and vomiting	Diarrhoea Vomiting
Wrist fracture due to fall	Wrist fracture Fall
BRAF positive malignant melanoma	BRAF gene mutation Malignant melanoma

What Terms to Select?

- Retinal disease from HIV with near total blindness (R and L)

Retinal damage

Retinal disorder

HIV disease

Blindness

HIV retinopathy

Blindness, both eyes

Medication Errors

- See MedDRA Concept Descriptions
- Discussed in MedDRA Points to Consider Companion Document – Section 3
 - Detailed examples
 - “Questions and Answers” about medication errors
- “Top-down” navigation in HLGT *Medication errors and other product use errors and issues* is best approach for term selection

Medication Errors (cont)

- Medication error with clinical consequences

Reported	LLT Selected	Comment
Patient was administered wrong drug and experienced hypotension	Wrong drug administered Hypotension	
Insulin was given using the wrong syringe resulting in the administration of an overdose. The patient developed hypoglycaemia.	Drug administered in wrong device Accidental overdose Hypoglycaemia	If an overdose is reported in the context of a medication error, the more specific term <i>LLT Accidental overdose</i> can be selected

Medication Errors (cont)

- Medication error without clinical consequences

Reported	LLT Selected	Preferred Option
Medication was given intravenously instead of intramuscularly without any adverse effect	Intramuscular formulation administered by other route	✓
	Intramuscular formulation administered by other route No adverse effect	

Medication Errors (cont)

- Important to record potential occurrence of medication error
- Unlikely to be reported as an adverse event but may need to be recorded in periodic safety reports

Reported	LLT Selected	Comment
<p>Pharmacist notices that the names of two drugs look similar and is concerned that this may result in a medication error</p>	<p>Drug name look-alike Circumstance or information capable of leading to medication error</p>	<p>Note: this example is a potential medication error. LLT <i>Drug name look-alike</i> provides additional information about the nature of the potential medication error, and LLT <i>Circumstance or information capable of leading to medication error</i> indicates that there is a potential medication error.</p>

Overdose, Toxicity and Poisoning

If overdose, poisoning or toxicity is explicitly reported, select the appropriate term

- Overdose with clinical consequences

Reported	LLT Selected
Stomach upset from study drug Overdose	Stomach upset Overdose

- Overdose without clinical consequences

Reported	LLT Selected	Preferred Option
Patient received an overdose of medicine without any adverse consequences	Overdose	✓
	Overdose No adverse effect	

What Term(s) to Select?

- The patient's renal function was measured every six months instead of on the monthly schedule recommended in the label for the drug

Medication monitoring error

Renal function test abnormal

Drug monitoring procedure incorrectly performed

- Unintentionally took more than maximum recommended dose due to dispensing error

Accidental overdose

Incorrect dose administered

Drug dispensing error

Death and Other Patient Outcomes

- Death, disability and hospitalization are considered outcomes and not usually coded as adverse events (AE) or adverse reactions (AR)
- If one of these outcomes is the only reported information, select an appropriate LLT for coding
- If a death term in MedDRA adds important clinical information, code it along with reported ARs/AEs

Reported	LLT Selected
Patient experienced a rash and had sudden cardiac death	Rash Sudden cardiac death

Drug Interactions

- Term includes reactions between drugs (including biologic products) and other drugs, foods, devices and alcohol
- If reporter states an interaction, select terms for interaction term and reported medical event(s)

Reported	LLT Selected
Patient drank cranberry juice which interacted with anticoagulant drug causing an INR increase	Food interaction INR increased

- If reporter does not specifically state an interaction, select terms for reported medical event(s) only

Suicide and Self-Harm

- Coding of suicide attempts, completed suicides and self-harm should be accurate and consistent
- Do not assume that an overdose, even if intentional, is a suicide attempt
- If a self-harm report does not mention suicide or suicide attempt, only code self-injury term
- If a suicide attempt is fatal, select a term that reflects the outcome instead of the attempt

Reported	LLT Selected	Comment
Suicide attempt resulted in death	Completed suicide	Report death as an outcome

What Term to Select?

- Death from cerebral hemorrhage

Sudden death

Death

Cerebral hemorrhage

Brain death

MedDRA

What Term to Select?

- Patient was found dead

Death from natural causes

Death

Died in sleep

Found dead

What Term(s) to Select?

- After taking an antihistamine along with her prescription proton pump inhibitor, a 53-year-old woman developed vertigo

Drug interaction NOS

Vertigo subjective

Vertigo

Drug interaction

What Term(s) to Select?

- Deliberately took an overdose

Intentional overdose

Suicide attempt

Deliberate overdose

Overdose NOS

MedDRA

Coding Exercises

Assessing the Reported Information

- Consider what is being reported. Is it a:
 - Clinical condition - Diagnosis, sign or symptom?
 - Indication?
 - Test result?
 - Injury?
 - Procedure?
 - Medication error?
 - Product use issue?
 - Product quality issue?
 - Social circumstance?
 - Device issue?
 - Procedural complication?

- **Is it a combination of these?**

The type of report will influence the way you search for a suitable LLT.

It may indicate in which SOC you expect to find the closest match.

Which LLT Would You Select?

Verbatim: “Man with decreased fertility.”

- A. Infertility
- B. Fertility decreased male
- C. Infertility male
- D. Fertility decreased

When poll is active, respond at pollev.com/meddra174

Which LLT Would You Select?

Verbatim: "A 27-year-old woman took a 2-week course of antibiotics during her pregnancy. She did not experience any side effects."

What is the preferred option for the LLT(s) to be selected?

- A. Maternal exposure during pregnancy
- B. No adverse effect
- C. Normal pregnancy

Which LLT Would You Select?

Verbatim: “The patient’s medication was stored at room temperature instead of in the refrigerator where it belonged.”

- A. Incorrect storage of drug
- B. Improper storage of unused product
- C. Intercepted medication error
- D. Product storage error temperature too high

"The patient's medication was stored at room temperature instead of in the refrigerator where it belonged"

Incorrect storage of drug

Improper storage of unused drug

Intercepted medication error

Product storage error temperature too high

Which LLT Would You Select?

Verbatim: “The patient’s medication was stored at room temperature instead of in the refrigerator where it belonged.”

- A. Incorrect storage of drug
- B. Improper storage of unused product
- C. Intercepted medication error
- D. Product storage error temperature too high

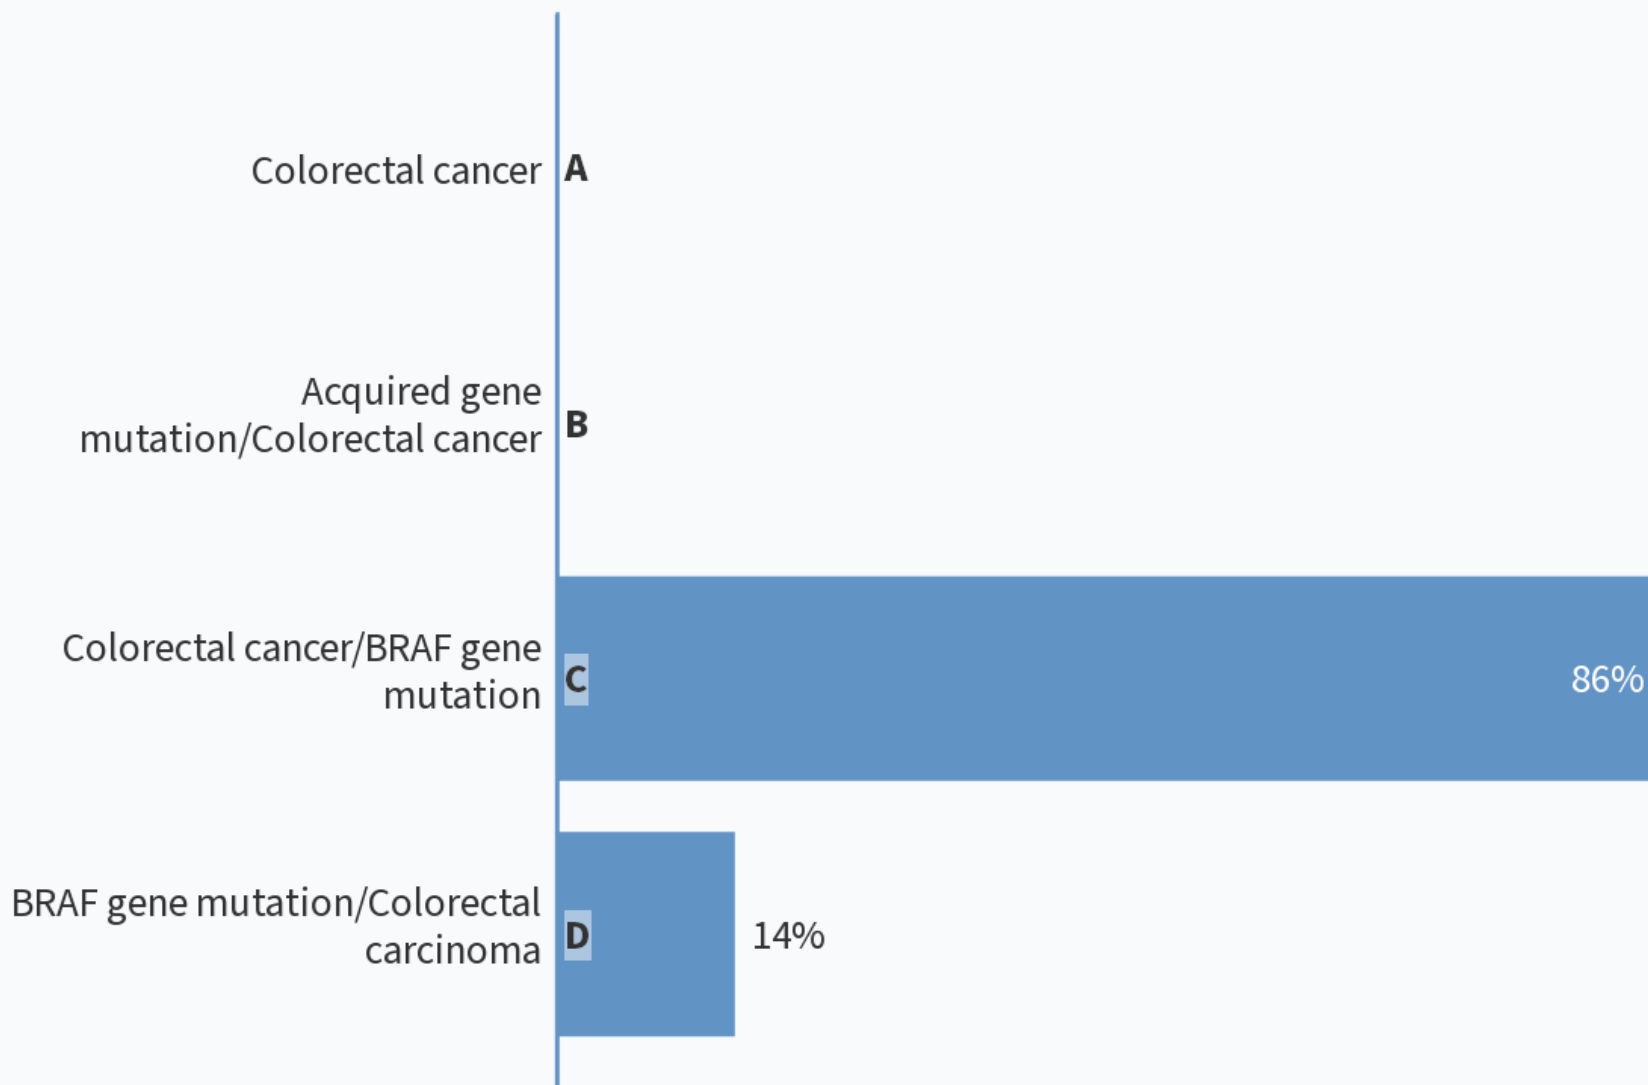

Which LLT(s) Would You Select?

Verbatim: “He was given Drug Y to treat a BRAF gene mutation-related colorectal cancer”

- A. Colorectal cancer
- B. Acquired gene mutation
- C. BRAF gene mutation
- D. Colorectal carcinoma

"He was given Drug Y to treat a BRAF gene mutation-related colorectal cancer"

Which LLT(s) Would You Select?

Verbatim: “He was given Drug Y to treat a BRAF gene mutation-related colorectal cancer”

- A. Colorectal cancer
- B. Acquired gene mutation
- C. BRAF gene mutation
- D. Colorectal carcinoma

Which LLTs Would You Select?

Verbatim: "Because the label on the package was missing the wording on dosing information, the patient took the drug twice daily instead of once daily, resulting in the administration of an overdose."

- A. Product label issue
- B. Product label missing
- C. Product label missing text
- D. Wrong dose administered
- E. Once daily dose taken more frequently
- F. Inappropriate schedule of drug administration
- G. Overdose
- H. Accidental overdose

When poll is active, respond at pollev.com/meddra174

Text **MEDDRA174** to **22333** once to join

"Because the label on the package was missing the wording on dosing information, the patient took the drug twice daily instead of once daily, resulting in the administration of an overdose"

Product label issue/Wrong drug administered/Accidental overdose

Product label missing text/Once daily dose taken more frequently/Overdose

Product label missing/Inappropriate schedule of drug administration/Overdose

Product label missing text/Once daily dose taken more frequently/Accidental overdose

Which LLTs Would You Select?

Verbatim: "Because the label on the package was missing the wording on dosing information, the patient took the drug twice daily instead of once daily, resulting in the administration of an overdose."

- A. Product label issue
- B. Product label missing
- C. Product label missing text

- D. Wrong dose administered
- E. Once daily dose taken more frequently
- F. Inappropriate schedule of drug administration

- G. Overdose
- H. Accidental overdose

MedDRA

Some MedDRA Coding “Pearls”

Remember That MedDRA Can Be Used to Code More Than AEs

Narrative vignette

A 75-year-old male receiving Drug X for rheumatoid arthritis developed symptomatic aortic valve stenosis. The patient's medical history is significant for colon cancer and cigarette smoking. He underwent an aortic valve replacement and developed a sternal wound infection three days post-surgery.

MedDRA Coding “Pearls”

- First, try using reporter’s actual words
- Be aware of MedDRA’s specificity
- Exploit MedDRA’s hierarchy – if an LLT is close to what you need, look at its “siblings” and “parent”
- Check where the LLT lies in MedDRA (i.e., check the hierarchy above to be sure it represents the verbatim term accurately)

MedDRA Coding “Pearls” (cont)

- Use “top-down” and “bottom-up” navigation
- Use available resources for difficult verbatim terms (web search, medical dictionaries, colleagues)
- Use advanced Boolean search terms features (i.e., “begins with”, “exact match”, “ends with”, “not contains”, “and”, “or”) when needed
- Become familiar with MedDRA Concept Descriptions

MedDRA Coding “Pearls” (cont)

And most important of all... get more coding training!

MedDRA

Summary

- ✓ Discussed important advanced principles presented in the MTS:PTC Document
- ✓ Discussed MedDRA Concept Descriptions
- ✓ Showed examples of coding of advanced principles
- ✓ Used browser and polling application to test your understanding of advanced coding principles
- ✓ Presented some MedDRA coding “pearls”
