#### Caso clínico

Paciente J.M.S, 72 anos, hipertensa e diabética, relata queda de própria altura ocorrida há cerca de 30 minutos. Relata dor de moderada intensidade em quadril à direita, atribuindo valor 8 em escala álgica (1-10). Apresenta encurtamento do MÍD, estando o membro inferior em rotação lateral e levemente abduzido. Qual seria a lesão apresentada por J.M.S?
