## Capacity Euthanasia List

Updated as of 11/6/2022 3:39:01PM

The pets on this list are at immediate risk of euthanasia and this serves as the final notice for them. It is updated daily before 5 pm for the *next capacity euthanasia* day. Humane euthanasia begins at 12:30 pm Monday thru Friday and 11am on Saturday. Although general euthanasia may take place on any of these days, pets with grave medical concerns may be euthanized at any time.

To allow the staff adequate processing and reply time, ALL placement intention emails from ACS-approved fosters and rescues MUST be received via: [ACSRescue-foster@Sanantonio.gov](mailto:ACSRescue-foster@Sanantonio.gov) at least 30 mins before euthanasia begins.

Placement requests submitted after these times, to different emails or by rescues, and fosters not currently approved to work with ACS provide no guarantee a pet will not be euthanized.

For pets located in kennels labeled "SAPA Tran": These are the transition kennels located in building #1 on our ACS 151 campus and are the primary responsibility of our rescue partner San Antonio Pets Alive!.

For placement interest and general questions about SAPA Tran pets, please email: [placement@sanantoniopetsalive.org](mailto:placement@sanantoniopetsalive.org). Animals listed in SAPA TRAN are still at risk of euthanasia and may not have confirmed placement. They may return these pets to ACS at any time for euthanasia.

---

### ZION

#### Evaluation Notes:

**03/27/2022**

Zion is the very definition of love. His warm golden fur is soft and thick, and his honey-caramel eyes are filled with endless adoration. He's a quiet guy and makes the perfect work buddy, both from home and from the office; just give him a place to relax and he'll give you short puppy love breaks that will work wonders for your mental health. Whether he's playing fetch in the yard or running alongside you, his graceful joy is beautiful to behold. He's the perfect passenger in the car, is house-broken, knows how to sit and take treats softly, and sleeps all night in his crate without issue. He is a bit timid but with some gentle encouragement he quickly picks up on new things, and until he learns that he will always have a reliable food source, a slow-feeder bowl helps him to savor his meals. Ultimately, Zion is a gentle and playful soul, especially with the four-legged ladies, who really wants a family and friends to love.

**03/27/2022**

This pup was very friendly in playgroup and was a staff favorite.

**11/06/2022**

1 of 2 in kennel

kennel presentation: pet came over to greet me

in kennel: pet displayed sociability via interest in tactile with a wagging tail.

## GENERAL

### Evaluation Notes:

**11/06/2022**

limited observation due to medical & young age

kennel presentation: pet was laying down and came over to me with a wagging tail and wiggly body displaying sociability.

**Vet Exam (10/18/2022):** LF toes swollen - replaced bandage/splint. Rec. recheck with Dr. Esterline tomorrow if possible, start oral NSAIDs.

**Vet Exam (10/21/2022):** Pt. is BAR, ok to examine. Technician reports that pt. is eating well, but does not attempt to move around kennel. Pt. does attempt to walk when placed on ground.

Plan: extend course of Rimadyl, start gabapentin for additional analgesia

**Vet Exam (10/28/2022):** Radiographs of forelimbs taken on 10/22 show bilateral displaced mid shaft fractures of the radius and ulna on both forelimbs

removed splint and bandage  
bandages were dirty and soaked in urine

pressure sores seen in the cubital region of both forelimbs, there is also generalized moist dermatitis, there does appear to be boney callus formation at the site of both fractures that appears to be stable

Bilateral muscle atrophy noted

patient can somewhat bear weight on the left front leg

Did not replace bandages due to severity of dermatitis on the skin  
RX Clavamox 250mg PO BID x 14 days

**Evaluation Notes:****11/03/2022**

Kennel presentation: Dog displays FAS (fear/anxiety/stress) and does not approach in kennel : snarls and snaps, i am able to loop leash over head and remove from cage. Dog walks well on leash and i am briefly able to pet him before he starts snapping at me again attempting to pick him up.  
Dog/Dog: Greet all dogs with wagging tail and sniffing.

Placed back into kennel with thick blanket. Dogs snarls and snaps while holding him in blanket. Possibly environmental fear.
