

# AP Biology

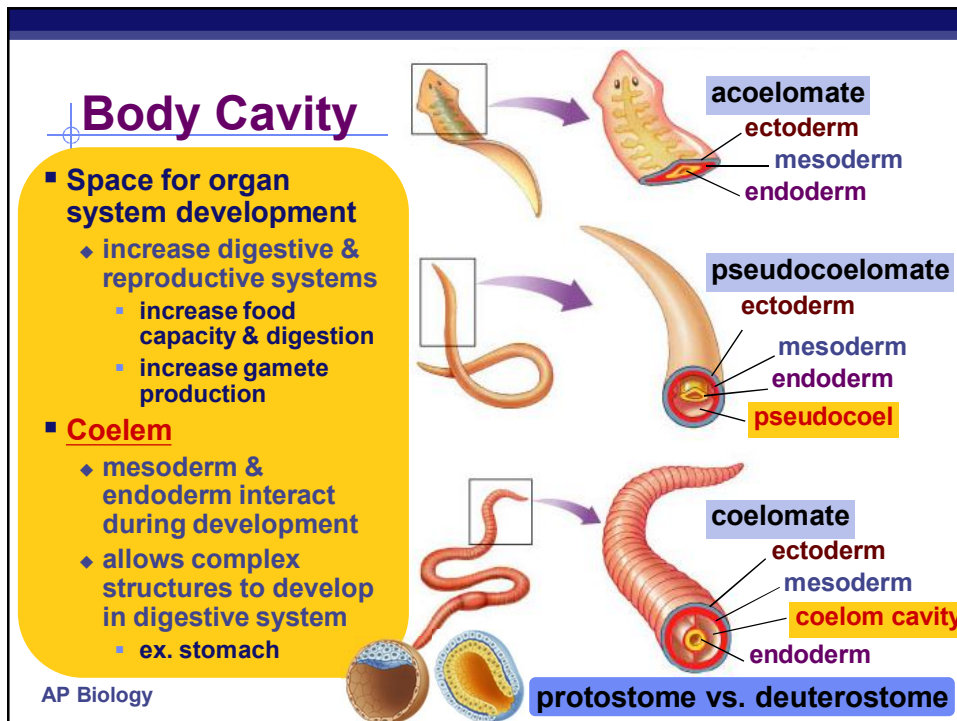

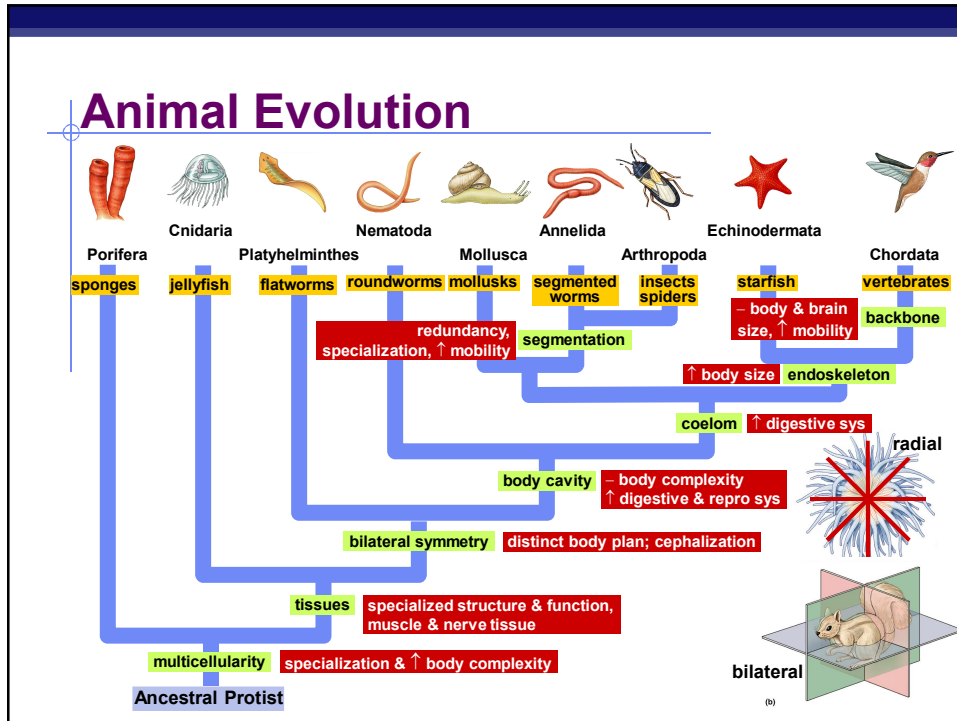

## Animal Characteristics

- **Heterotrophs**
  - ◆ must ingest others for nutrients
- **Multicellular**
  - ◆ complex bodies
- **No cell walls**
  - ◆ allows active movement
- **Sexual reproduction**
  - ◆ no alternation of generations
  - ◆ no haploid gametophyte

# AP Biology

## Invertebrate: Porifera

### ■ Sponges

- ◆ no distinct tissues or organs
  - do have specialized cells
- ◆ no symmetry
- ◆ sessile (as adults)

food taken into each cell by endocytosis

## Invertebrate: Cnidaria

### ■ Jellyfish, hydra, sea anemone, coral

- ◆ tissues, but no organs
- ◆ two cell layers
- ◆ radial symmetry
- ◆ predators
  - tentacles surround gut opening
  - extracellular digestion
    - ◆ release enzymes into gut cavity
    - ◆ absorption by cells lining gut

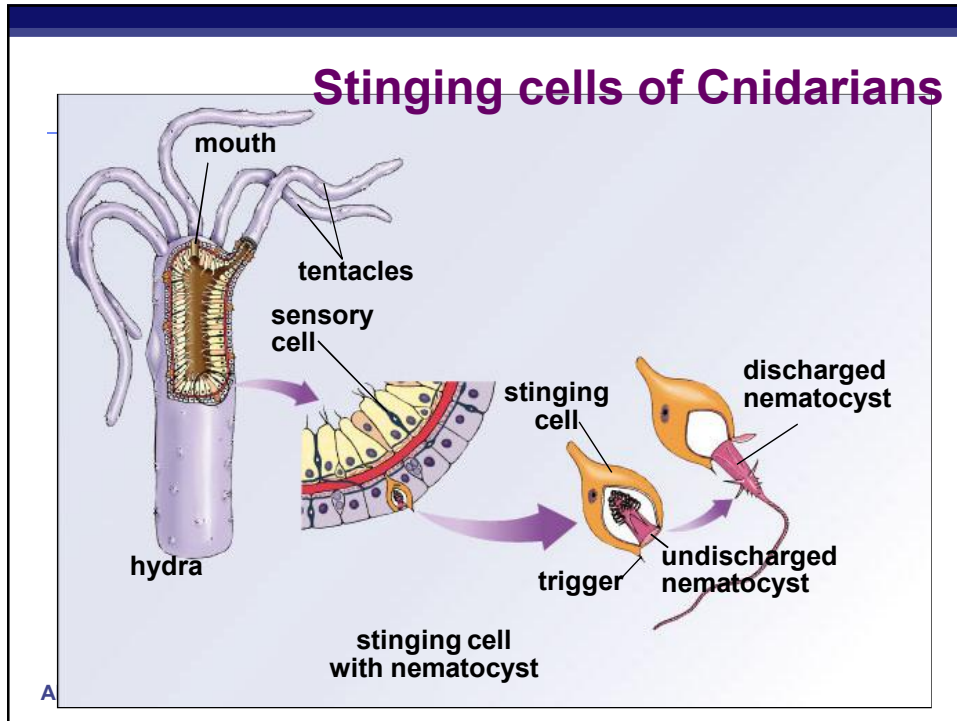

(a) Sea anemone: a polyp

(b) Jelly: a medusa

# AP Biology

## Invertebrate: Platyhelminthes

- **Flatworms**
  - ◆ **tapeworm, planaria**
  - ◆ mostly parasitic
  - ◆ **bilaterally symmetrical**
    - have right & left & then have head (anterior) end & posterior end
    - ◆ **cephalization** = development of brain
    - ◆ concentration of sense organs in head
    - increase specialization in body plan

Animals now face the world head on!

Labels in the diagram: ectoderm, mesoderm, endoderm, **acoelomate**.

# AP Biology

## Invertebrate: Nematoda

### ▪ Roundworms

- ◆ bilaterally symmetrical
- ◆ body cavity
  - pseudocoelom = simple body cavity
  - digestive system
    - ◆ tube running through length of body (mouth to anus)
- ◆ many are parasitic
  - hookworm

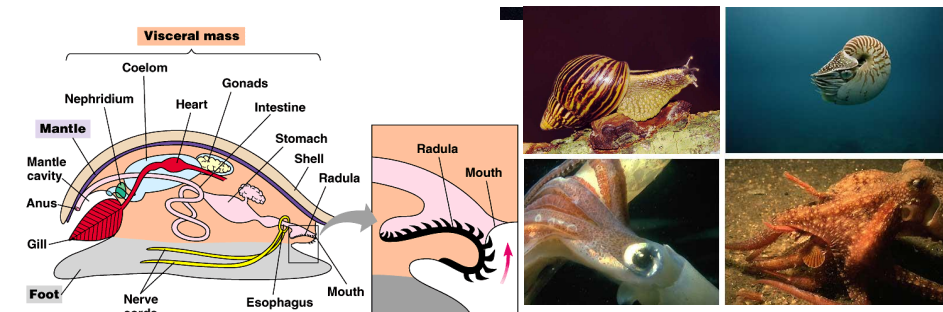

*C. elegans*

## Invertebrate: Mollusca

### ▪ Mollusks

- ◆ slugs, snails, clams, squid
- ◆ bilaterally symmetrical (with exceptions)
- ◆ soft bodies, mostly protected by hard shells
- ◆ true coelem
  - increases complexity & specialization of internal organs

# AP Biology

## Invertebrate: Annelida

- **Segmented worms**
  - ◆ **earthworms, leeches**
  - ◆ **segments**
    - increase mobility
    - redundancy in body sections
  - ◆ **bilaterally symmetrical**
  - ◆ **true coelem**

fan worm

leech

AP Biology

## Invertebrate: Arthropoda

- **Spiders, insects, crustaceans**
  - ◆ most successful animal phylum
  - ◆ **bilaterally symmetrical**
  - ◆ **segmented**
    - specialized segments
    - allows jointed appendages
  - ◆ **exoskeleton**
    - chitin (carbohydrate) + protein

# AP Biology

## Arthropod groups

### arachnids

8 legs, 2 body parts  
spiders, ticks, scorpions

### crustaceans

gills, 2 pairs antennae  
crab, lobster, barnacles,  
shrimp

### insects

6 legs, 3 body parts

## Invertebrate: Echinodermata

- Starfish, sea urchins, sea cucumber
  - ◆ radially symmetrical as adults
  - ◆ spiny endoskeleton
  - ◆ deuterostome

loss of bilateral symmetry?

# AP Biology

## Invertebrate quick check...

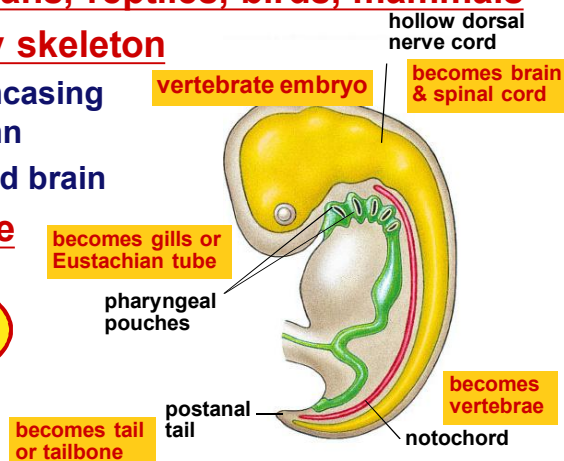

**Invertebrates:** Porifera, Cnidaria, Platyhelminthes, Nematoda, Annelida, Mollusca, Arthropoda, Echinodermata

- Which group includes snails, clams, and squid?
- Which group is the sponges?
- Which are the flatworms?
  - ...segmented worms?
  - ...roundworms?
- Which group has jointed appendages & an exoskeleton?
- Which two groups have radial symmetry?
- What is the adaptive advantage of bilateral symmetry?
- Which group has no symmetry?

AP Biology

## Chordata

- **Vertebrates**
  - ◆ **fish, amphibians, reptiles, birds, mammals**
  - ◆ **internal bony skeleton**
    - backbone encasing spinal column
    - skull-encased brain
  - ◆ **deuterostome**

# AP Biology

450 mya

salmon, trout, sharks

## Vertebrates: Fish

- **Characteristics**
  - ◆ **body structure**
    - bony & cartilaginous skeleton
    - jaws & paired appendages (fins)
    - **scales**
  - ◆ **body function**
    - **gills** for gas exchange
    - **two-chambered heart**; single loop blood circulation
    - **ectotherms**
  - ◆ **reproduction**
    - **external fertilization**
    - external development in aquatic egg

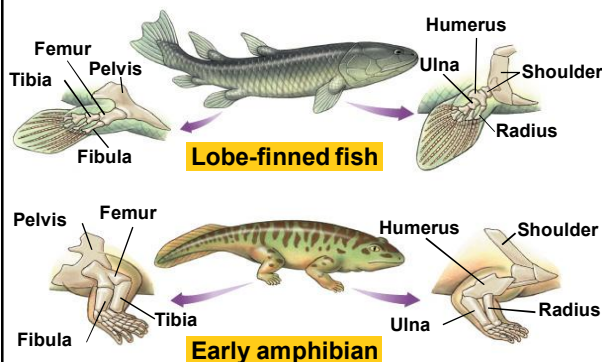

AP Biology

## Transition to Land Evolution of tetrapods

Tiktaalik

# AP Biology

350 mya

## Vertebrates: Amphibian

frogs  
salamanders  
toads

### Characteristics

- ◆ body structure
  - legs (tetrapods)
  - moist skin
    - ◆ gas exchange
- ◆ body function
  - lungs (positive pressure) & diffusion through skin for gas exchange
  - three-chambered heart; veins from lungs back to heart
  - ectotherms
- ◆ reproduction
  - external fertilization
  - external development in aquatic egg
  - metamorphosis (tadpole to adult)

250 mya

## Vertebrates: Reptiles

dinosaurs, turtles  
lizards, snakes  
alligators, crocodile

### Characteristics

- ◆ body structure
  - dry skin, scales, armor
- ◆ body function
  - lungs for gas exchange
  - thoracic breathing; negative pressure
  - three-chambered heart
  - ectotherms
- ◆ reproduction
  - internal fertilization
  - external development in amniotic egg

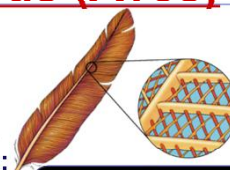

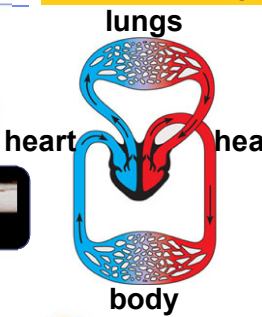

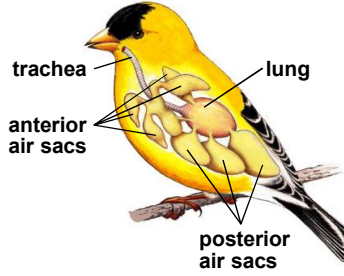

# AP Biology

150 mya

## Vertebrates: Birds (Aves)

finches, hawk  
ostrich, turkey

- Characteristics
  - body structure
    - feathers & wings
    - thin, hollow bone; flight skeleton
  - body function
    - very efficient lungs & air sacs
    - four-chambered heart
    - endotherms
  - reproduction
    - internal fertilization
    - external development in amniotic egg

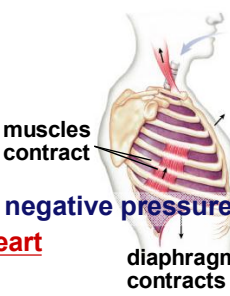

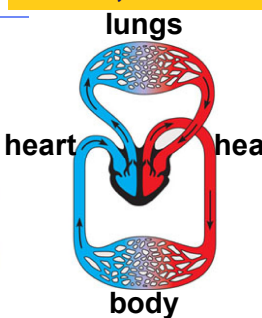

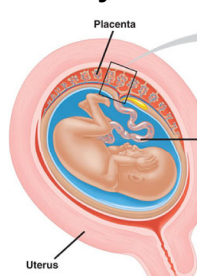

AP Biology

220 mya / 65 mya

## Vertebrates: Mammals

mice, ferret  
elephants, bats  
whales, humans

- Characteristics
  - body structure
    - hair
    - specialized teeth
  - body function
    - lungs, diaphragm; negative pressure
    - four-chambered heart
    - endotherms
  - reproduction
    - internal fertilization
    - internal development in uterus
      - nourishment through placenta
    - birth live young
    - mammary glands make milk

AP Biology

## Vertebrates: Mammals

- Sub-groups
  - ◆ **monotremes**
    - **egg-laying mammals**
    - lack placenta & true nipples
    - duckbilled platypus, echidna
  - ◆ **marsupials**
    - **pouched mammals**
      - ◆ offspring feed from nipples in pouch
    - short-lived placenta
    - koala, kangaroo, opossum
  - ◆ **placental**
    - **true placenta**
      - ◆ nutrient & waste filter
    - shrews, bats, whales, humans

AP Biology

## Vertebrate quick check...

- Which vertebrates lay eggs with shells?
- Which vertebrates are covered with scales?
- What adaptations do birds have for flying?
- What kind of symmetry do all vertebrates have?
- Which vertebrates are ectothermic and which are endothermic?
- Why must amphibians live near water?
- What reproductive adaptations made mammals very successful?
- What characteristics distinguish the 3 sub-groups of mammals?
