

Application Delivery: Kubernetes Is NOT Enough

BOV-1180

Kubernetes, PaaS, or both?

Jeff Hobbs

Director, Engineering: SUSE Cloud Application Platform

What makes Kubernetes Hard for Application Developers?

CNCF Landscape

~~Kubernetes Is NOT Enough~~

Kubernetes Is TOO MUCH

How Is Platform-as-a-Service Different?

About Building Platforms ...

Kelsey Hightower ✓
@kelseyhightower

Kubernetes is a platform for building platforms. It's a better place to start; not the endgame.

Replying to @kelseyhightower

Honest question: do we really want to encourage every single dev team on earth to build their own platform? So many great startups have failed because they focused on building "an amazing platform" instead of just shipping code...

Not when an existing platform suits their needs.

16

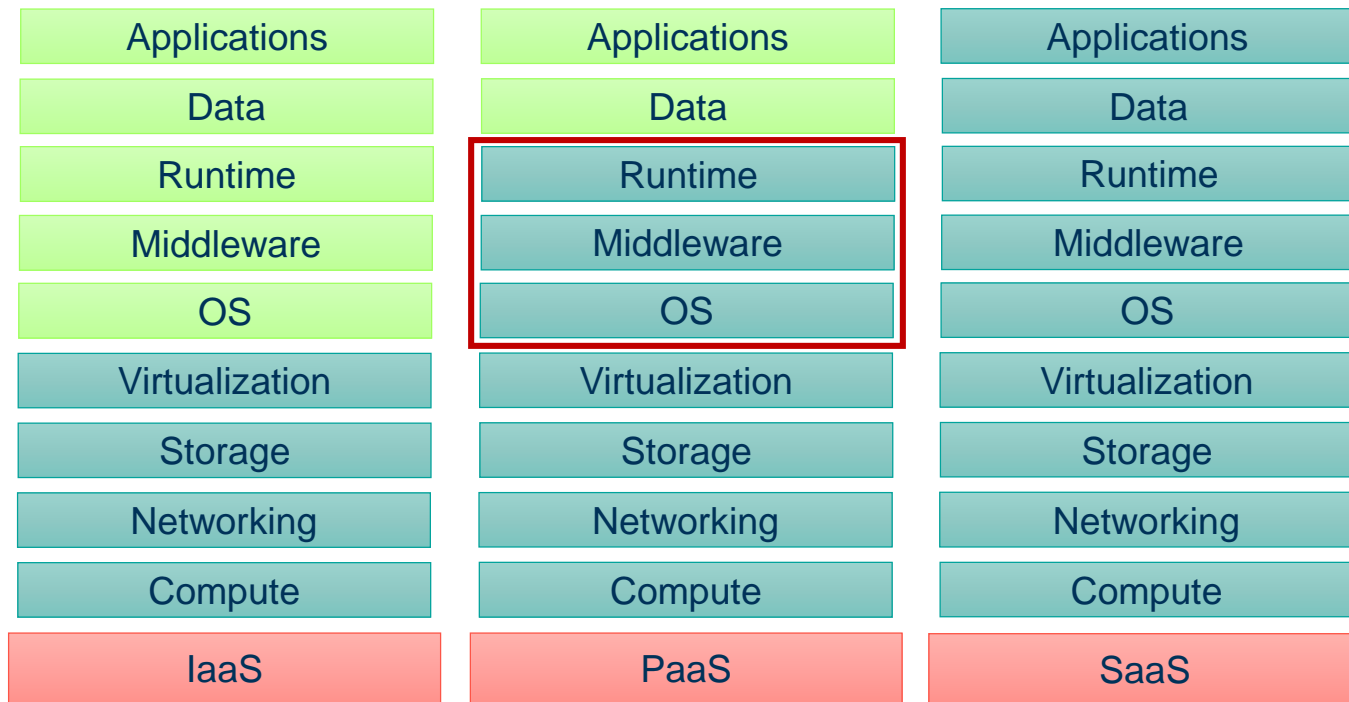

- devops.com, March 2020

What Is A Platform?

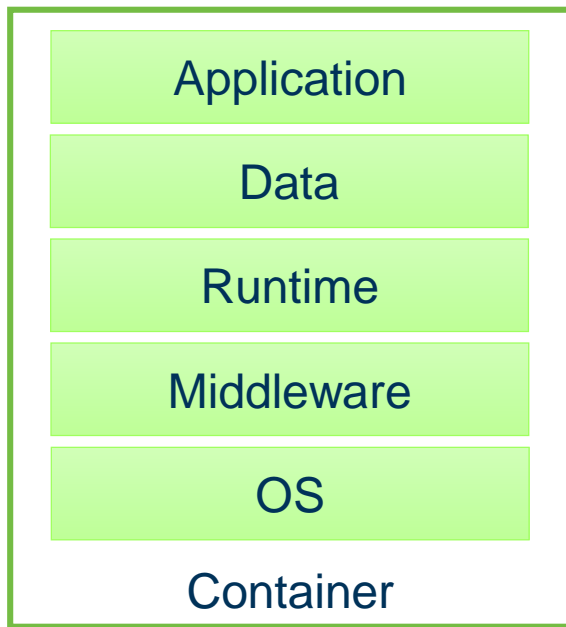

Comparing *aaSes

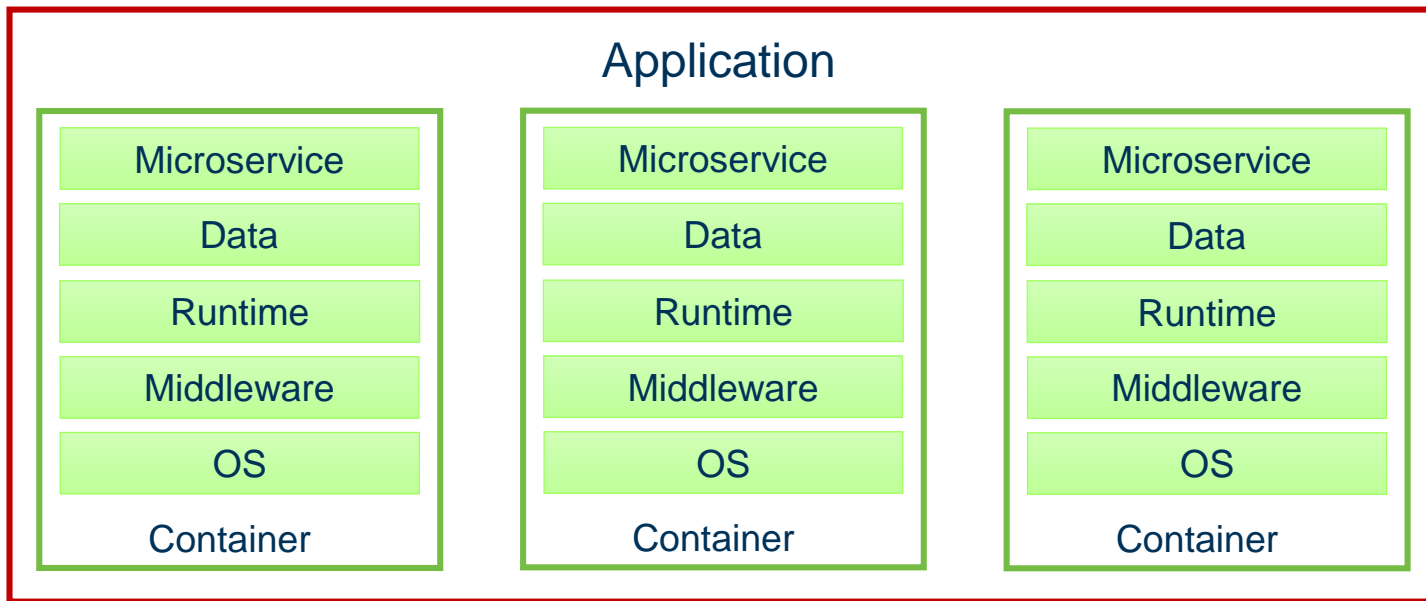

Vendor-managed

Self-managed

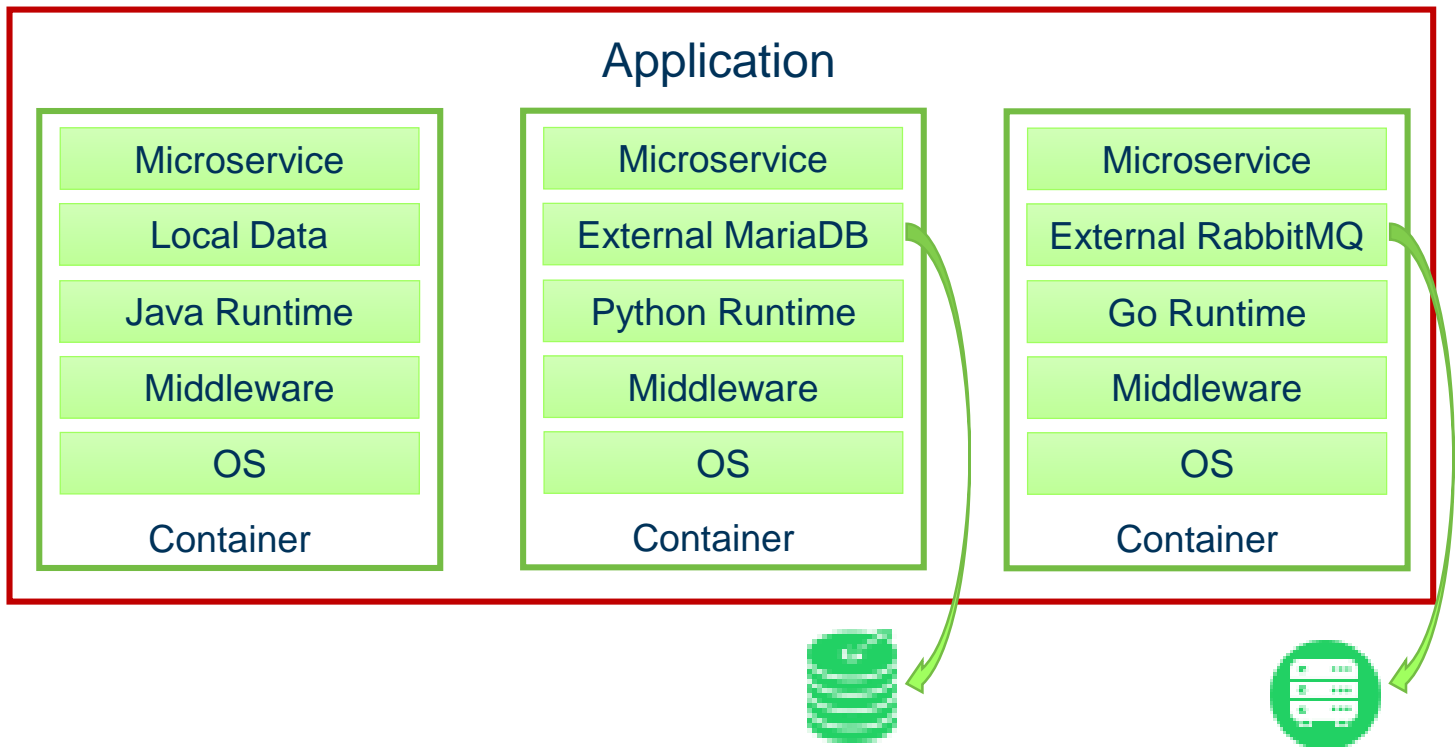

Perception: Application In A Container

Reality: Applications Are **Not** Containers

Reality: Applications Are **Not** Containers

Reality: Applications Are **Not** Containers

- How do I ...
 - build it (once or 1000 times)
 - connect it to services
 - scale it
 - route to it
 - manage its lifecycle

A Platform should understand the world from the application point of view

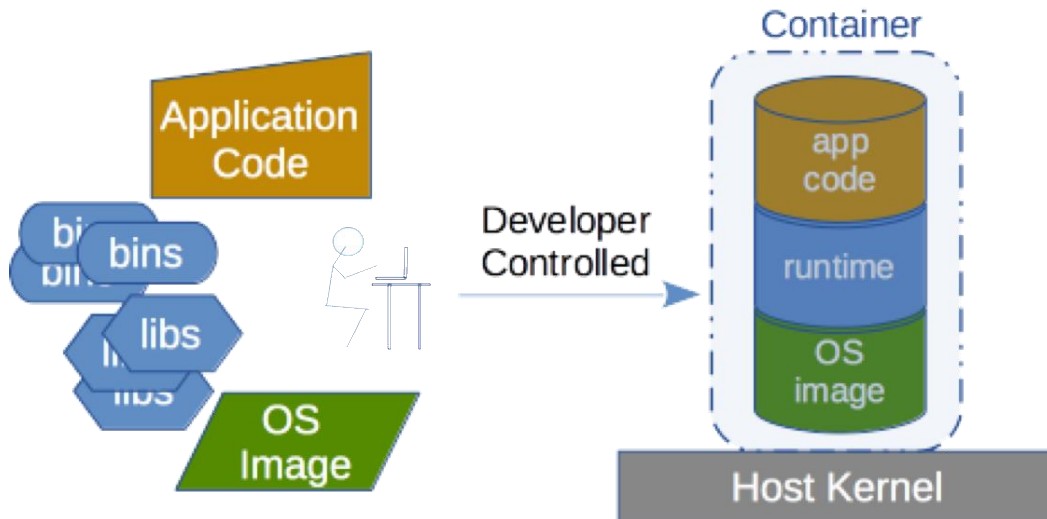

CLOUD FOUNDRY

What Is Cloud Foundry As A **Platform**

- API driven, resilient, and scalable application aware system
- Separation of concerns between application, middleware, and OS
- Routing and dynamic route management
- Role-based access control with Organization and Space concepts
- Centralized logging
- Service brokering with services ecosystem

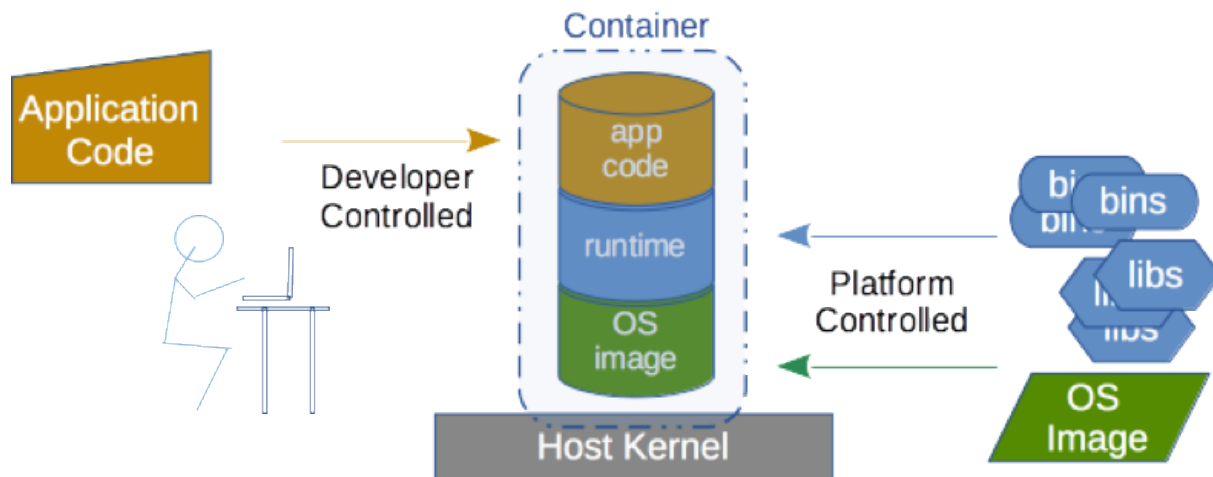

Separation Of Concerns

- "Fullstack Engineer" - jack of all trades, master of none

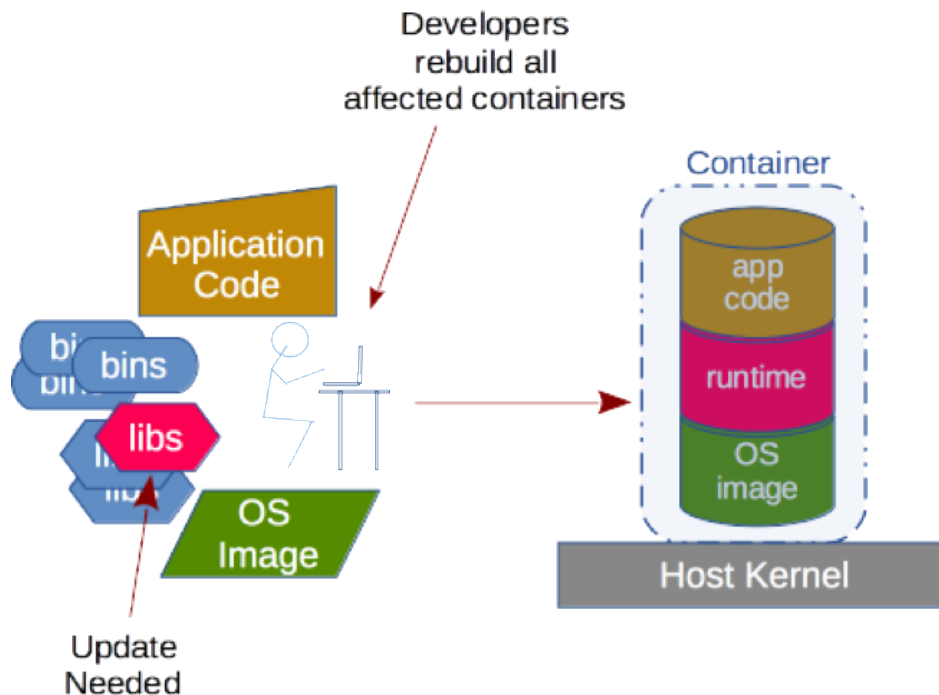

Separation Of Concerns

- Why rely on the developer for all elements of the stack?

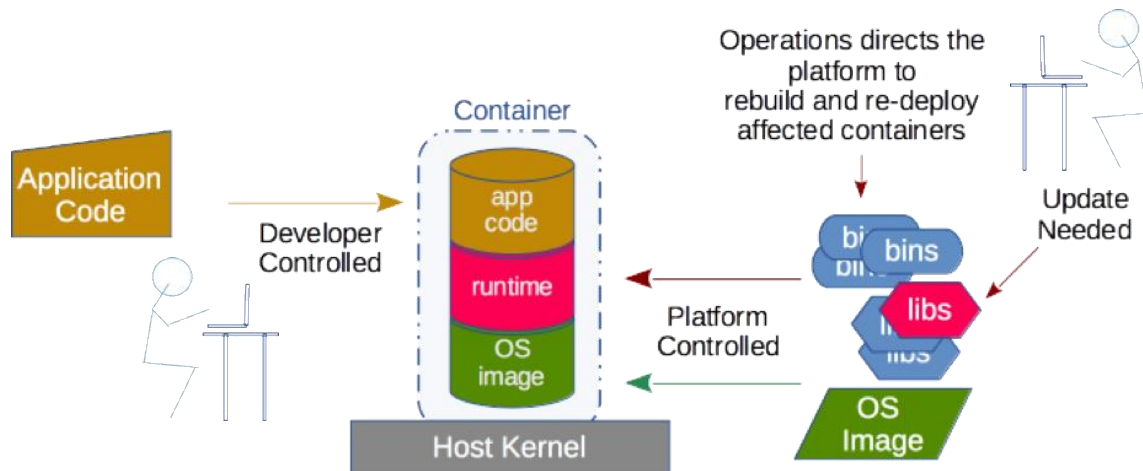

Separation Of Concerns

- What do you do when one element needs updating?

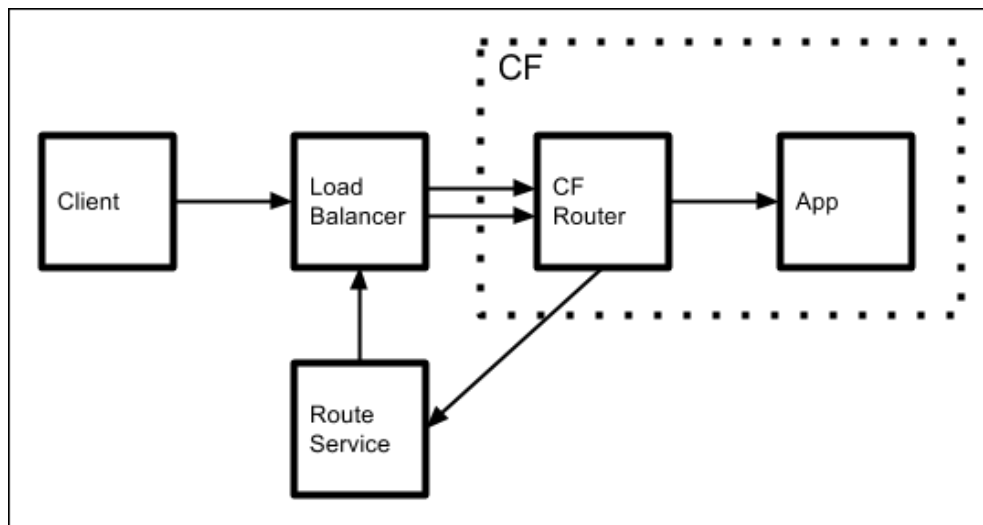

Separation Of Concerns

- Clean separation means different responsible parties can manage the lifecycle of each area without involving the others

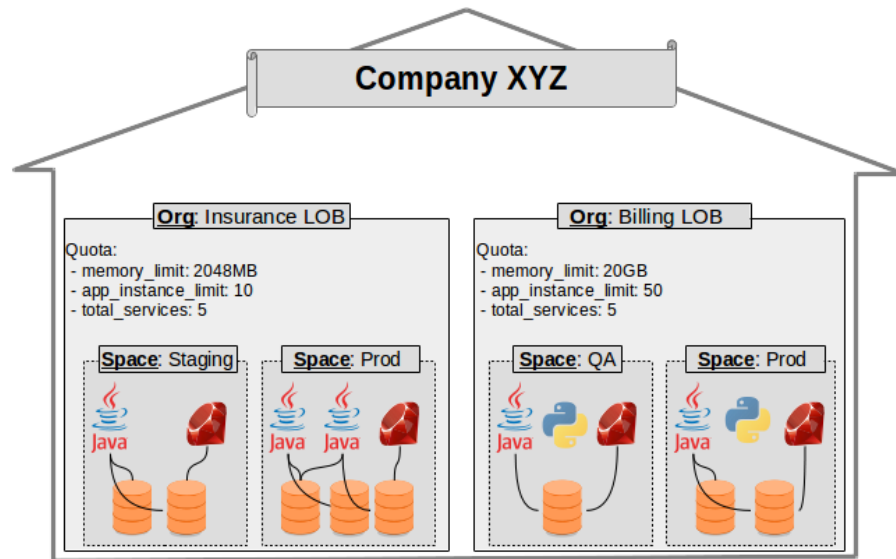

Cloud Foundry Routing

- Software (Go) based virtual routing layer with enhanced features
- Load balances across application instances

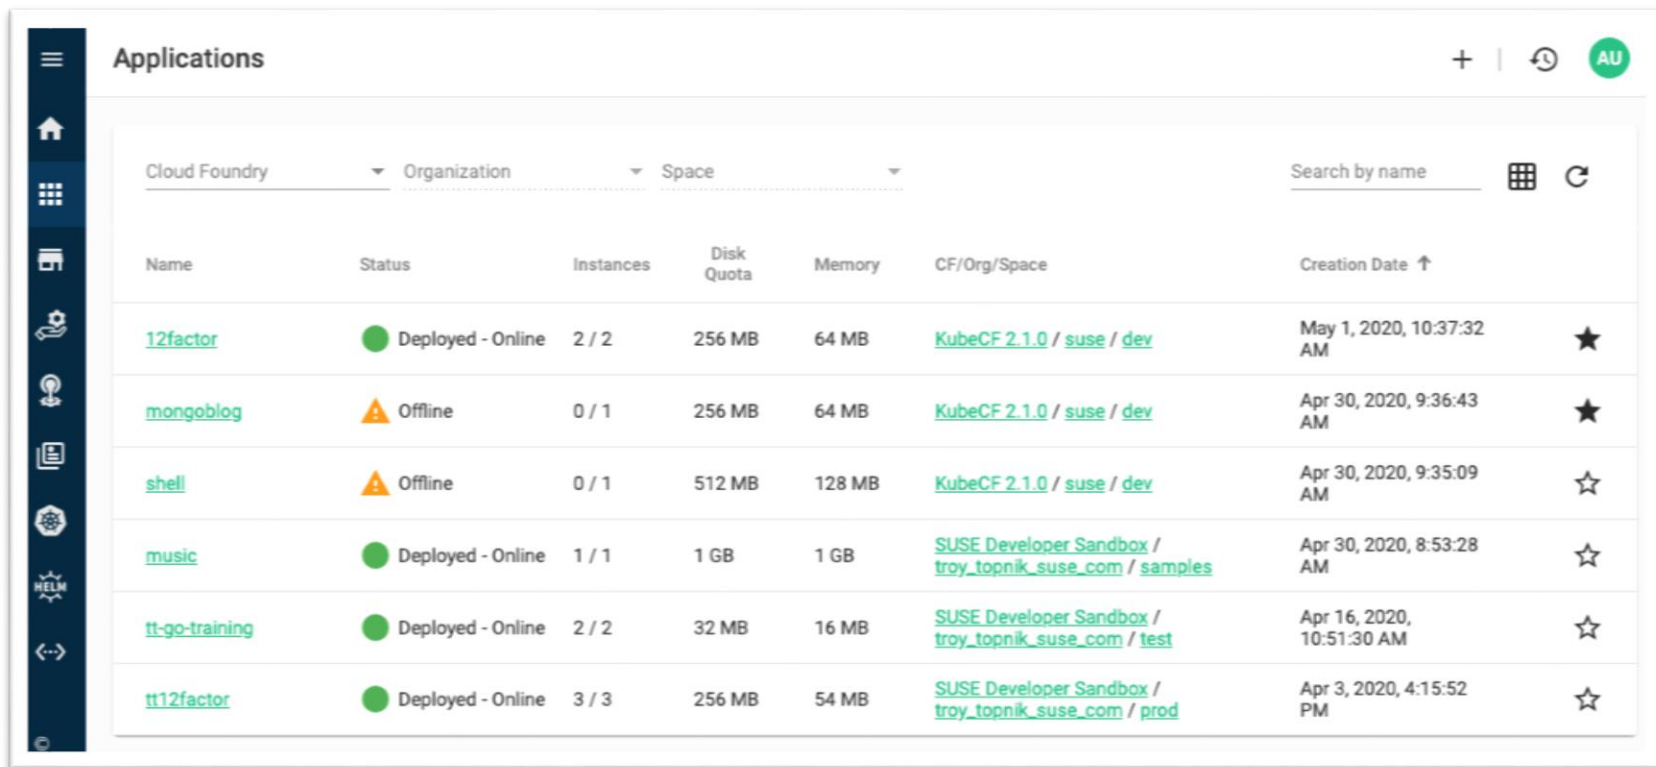

Cloud Foundry RBAC

- User management structured into Organizations and Spaces
- Multi-tenant aware with fine grained quota management

Scalably Manage Applications

The screenshot displays the 'Applications' management interface in the SUSE Cloud Foundry console. On the left is a dark blue sidebar with icons for navigation. The main area has a header with 'Applications', a '+', a refresh icon, and a user profile 'AU'. Below the header are filters for 'Cloud Foundry', 'Organization', and 'Space', along with a 'Search by name' field and a table view icon. The table lists applications with columns for Name, Status, Instances, Disk Quota, Memory, CF/Org/Space, and Creation Date. Applications are listed with their status (Online or Offline), instance counts, resource usage, and deployment paths.

Name	Status	Instances	Disk Quota	Memory	CF/Org/Space	Creation Date ↑

Platform as a Service

A good application platform will provide the tools that empower developers on the larger scale in an enterprise environment

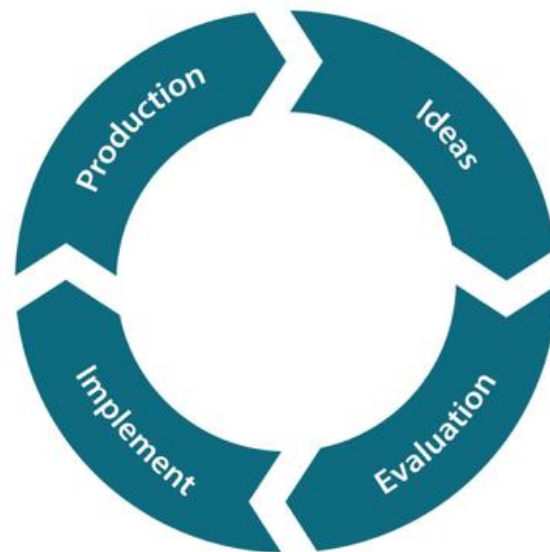

- Freedom to choose
 - Ability to innovate quickly
 - Manage apps at scale
- ... while adhering to enterprise standards

CLOUD FOUNDRY

So When Kelsey Says...

Kelsey Hightower ✓
@kelseyhightower

Still true.

Kelsey Hightower ✓ @kelseyhightower · Apr 11, 2017

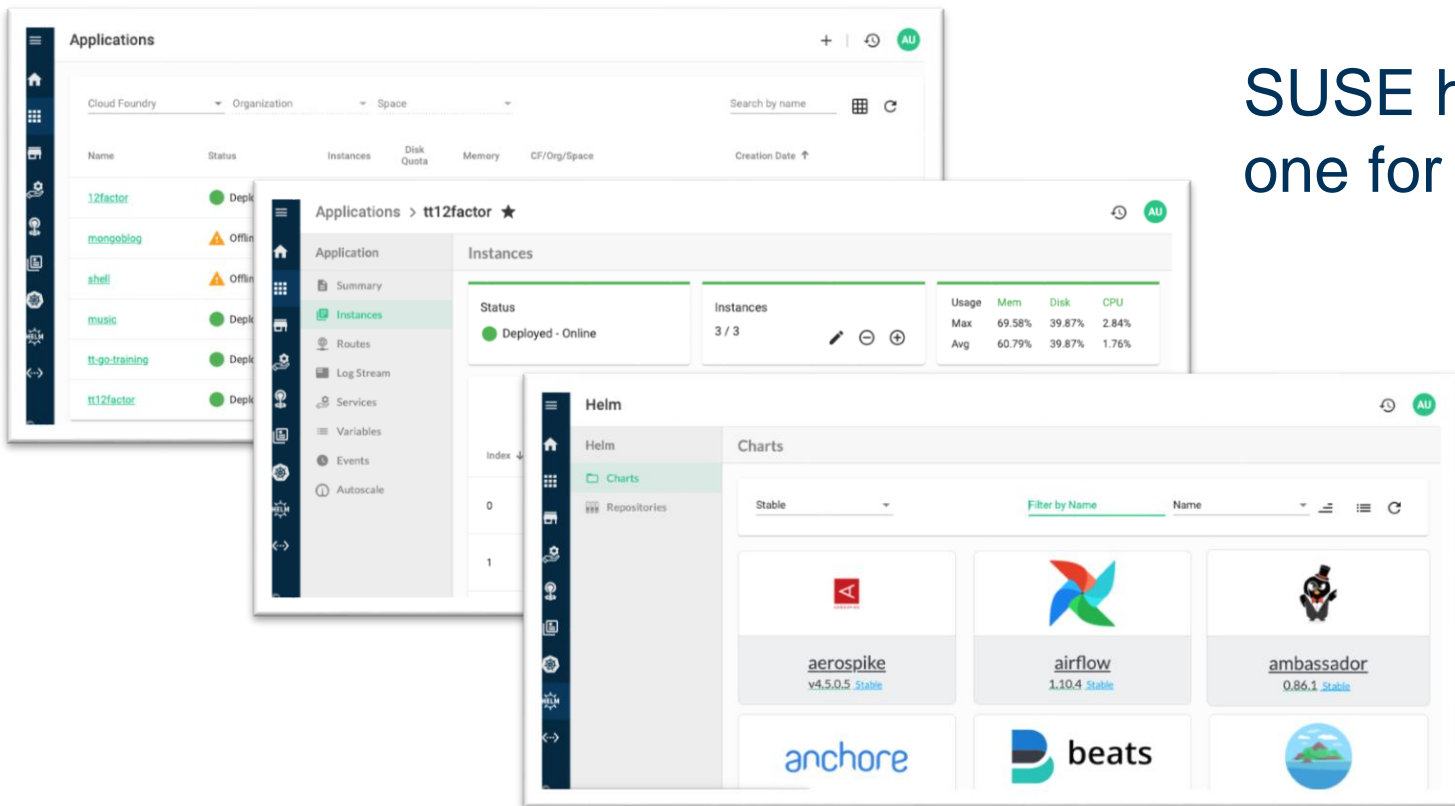

I'm convinced the majority of people managing infrastructure just want a PaaS.
The only requirement: it has to be built by them.

... You Don't Have To Start From Scratch

SUSE has built
one for you!

SUSE Cloud Application Platform

Eirini & Quarks

Deliver Real Business Value

Increase agility with a modern application platform

\$100,000 average cost saving per application development cycle*

10 weeks faster time-to-market per application on average*

3 public cloud deployment options for maximum flexibility (Amazon EKS, Azure AKS, Google GKE)

* Cloud Foundry Foundation Application Runtime User Survey, Oct 2018
