**The science of revision: nine ways pupils can revise for exams more effectively.**

The Guardian. Bradley Busch Psychologist @Inner\_drive Tuesday 19 April 2016

Ditch the highlighter and teach a friend. Psychology shows us a lot about how to improve our memory and avoid distractions - here are some dos and don'ts

## Revision Timetable

### Planning Tips

1. Write your timetable in pencil (or make a version on the computer) so you can change things around if necessary.
2. Start by thinking about what activities you can't miss (dinner, clubs or TV programs) and put these into your timetable.
3. Plan in when you need to do your homework to get it in on time
4. On top of your homework time, aim for a minimum of 2 extra hours on a weekday and 4 hours each day over the weekend.
5. Plan to revise for 1 hour per subject each week (this is in addition to homework) fill in the table below to help you work out how much time you need to spend on revision
6. Fill in the timetable spreading out the subjects (e.g., don't do a whole day of Maths, do a bit each day) put contrasting subjects next to each other, to give your brain a break (e.g. English and Physics)
7. Stick to the timetable, it will help ensure you cover each subject and spread out your revision.

Subject	Group	Priority	Number of hours each week
Maths	Core	High (+2 hours)	
English Language	Core	High (+2 hours)	
English Literature	Core	High (+2 hours)

## Exam command words

Command words are words in exam questions that give you clues on what the examiners are looking for.

Depending on the command word, your answer to a question will be very different.

There are four main ones you'll come across; give, describe, explain and evaluate.

### **Give what is in the picture.**

For this answer, you simply need to state using one or two words what is in the picture

A dress

### **Describe what is in the picture.**

For this answer, you need to tell the examiners what it looks like, or recall an event or process

An orange halter neck dress with a pale band around the waist.

### **Explain what is in the picture.**

For this answer, you need to give reasons why something is the way it is

The dress is a summer dress so it has a halter neck, it is from the 1950s and shows the style at the time.

### **Evaluate what is in the picture.**

Here you need to give good points, bad points, your opinion and justify your opinion

- This dress is good because it is made from a light fabric so will be cool in summer
- This dress is bad because the colour is too bright
- Overall, I think this is a good dress...
- ... because it is well suited to the purpose of being a summer dress.

## Glossary of exam command words

**Calculate/ Determine** use maths to work out the answer

**Choose** circle the answer from the selection

**Compare** what are the similarities and differences

**Complete** fill in the gaps - pay attention to any given words, some may be used more than once some not at all

**Define** what does the word mean?

**Describe** what it looks like, or recall an event or process

**Design/ Plan** plan something

**Draw** draw a scientific diagram, not an arty sketch

**Estimate** give a sensible guess

**Evaluate** give good points, bad points your option and justify your opinion

**Explain** give reasons why something is the way it is

**Give/Name** a short answer

**Identify/Label** name a part

**Justify** give an answer and support it with a reason

**Measure** you might need to get your ruler out for this one

**Plan** write a method, don't forget your variables, controls and risk assessment

**Plot** mark points on a graph using an x

**Predict/suggest** what do you think is going to happen, you may need to use information from the question and knowledge from class

**Show** give evidence and come to a conclusion

**Sketch** a rough drawing, a graph doesn't always need number labels on the axis, but it must be an accurate representation

## How to answer 6-mark questions

1. Identify the command word, this tells you what the examiners are looking for. This is generally describe, explain or evaluate.
2. Go back over the question and use different colour high-lighter pens to pick out key bits of information.
3. Plan the structure of your question. Table, paragraphs, diagram.
4. Write your answer
5. Check your answer fully answers the question, make sure is it balanced and cover all the points asked for in the question.
6. Check your spelling, punctuation and grammar.

For over 100 examples of 6 mark questions, with example answers, get my book Science 6 mark answers, from my website or Amazon.

## Biology

### 5 most common mistakes in a biology exam

1. Not referring to the graphs - if the exam question asks about a graph, make sure you refer to it in your answer. Most marks can be picked up by clearly talking about the graph
2. Ignoring the patterns and relationships - if there is a link between two things then tell the examiner about it, this is probably what they are looking for
3. Describe or explain - getting these two words confused is a common mistake in all exams but it happens more in biology than any other subject. Make sure you know what the difference is
4. Skipping levels - don't just focus on what is at the top and the bottom, remember all those important bits in-between
5. Forgetting the practical work - loads of marks can be picked up by talking about the practical's you have done in class. Just clearly state all the details and risks

## Chemistry

### 5 most common mistakes in a chemistry exam

1. Drawing the wrong number of bonds in organic chemistry
2. Being too wishy washy in colour changes
3. Putting numbers in the wrong place
4. Missing out (or adding in too many) capital letters
5. Keep numbers in your calculator memory to avoid rounding errors

### Important tips

- When balancing equations, if you really, really can't work it out. Write 2 as the answer
- If you've forgotten the reaction conditions, write 'hot and a catalyst'

## Physics

### 5 most common mistakes in a physics exam

1. Not knowing your units - this comes up a lot as separate marks and your formula sheet will be useless if don't know these
2. Not being able to rearrange equations - if you want to get the top grades you'll need to use sophisticated maths skills
3. We don't use reoccurring in science - you need to round to the nearest whole number
4. Store numbers in your calculator's memory - so you don't make an error due to rounding
5. Missing out the keywords - easy, easy makes here but you need to learn them!!
