

Area or Perimeter?

That is the question!

How to find area and perimeter of irregular shapes..

Created by Danielle Miller, Hawk Ridge

Area

- The number of **square units** needed to cover the region inside a figure.

There are 40 squares covering the inside of the figure.

- Area is always measured in **square units**!

Area

- To calculate the area of a regular figure use the formula:

$$\text{Area} = \text{Length} \times \text{Width}$$

$$\text{Area} = 9\text{m} \times 2\text{m}$$

$$\text{Area} = 18 \text{ square meters}$$

Area

To calculate the area of an irregular figure, follow these steps:

1. Divide the irregular figure into regular figures.
2. Look for missing measurements that you will need to find the area of each new regular figure.
3. Find the area of every regular figure.
4. Add the areas of each regular figure together to find the total area.

Step 1:

Divide the irregular figure into regular figures.

Step 2:

Look for missing measurements that you will need to find the area of each new regular figure.

This side was 8m but because you split it to make two regular rectangles, look carefully at every side of the figure to see what the new measurements will be!

Don't forget the rule, opposite sides are equal!

This will help you find the missing measurements!

Step 3:

Find the area of every regular figure.

Find the area of rectangle "A"

$$A = L \times W$$

$$A = 4\text{m} \times 4\text{m}$$

$$A = 16 \text{ square m}$$

Find the area of rectangle "B"

$$A = L \times W$$

$$A = 10\text{m} \times 4\text{m}$$

$$A = 40 \text{ square m}$$

Step 4:

Add the areas of every regular figure.

Area of rectangle "A"

A = 16 square m

40 square m
+ 16 square m
56 square m

**The total area is
56 square m.**

Now You Try!
Find the area of this figure:

Work it out like this...

The length = 6m

Because $10\text{m} - 4\text{m} = 6\text{m}$

$$\begin{aligned} A &= L \times W \\ A &= 10\text{m} \times 4\text{m} \\ A &= 40 \text{ square m} \end{aligned}$$

The width = 4m

Because $10\text{m} - 6\text{m} = 4\text{m}$

$$\begin{aligned} A &= L \times W \\ A &= 10\text{m} \times 4\text{m} \\ A &= 40 \text{ square m} \end{aligned}$$

$$\begin{aligned} A &= L \times W \\ A &= 6\text{m} \times 4\text{m} \\ A &= 24 \text{ square m} \end{aligned}$$

Did you get the right answer?

Total Area=
104 square m

Try another one...

Did you get the right answer?

Perimeter

- The distance around a figure.

The perimeter of this figure is **51 inches.**

- Perimeter is always measured in linear units.

Perimeter

- To calculate the perimeter of a regular figure add the lengths of all the sides!

$$\text{Perimeter} = 11\text{m} + 3\text{m} + 11\text{m} + 3\text{m}$$

$$\text{Perimeter} = 28 \text{ m}$$

Perimeter

- Now you try...

- Did you get $P = 7m + 4m + 7m + 4m$?
- **Perimeter = 22m**

Perimeter

Perimeter

The
perimeter
of this
shape is
28 units.

Area or Perimeter?

- tiles for a bathroom floor **area**
- lace for the edge of a tablecloth **perimeter**
- trim for the bulletin board in your classroom **perimeter**
- paint for a wall **area**
- grass seed for your front yard **area**
- M&M candies for the outside edge of a cake top **perimeter**
- carpet for the reading corner **area**
- fence for your backyard **perimeter**
- mulch to cover the playground **area**
