Cover

Dimer of *trp* repressor protein, with bound tryptophan (in blue). The protein binds to DNA and regulates expression of the *trp* genes that control tryptophan biosynthesis. Crystal structure by Paul Sigler et al.; image by Jane and David Richardson.

Frontispiece

Figure 11.15a The T state of aspartate transcarbamoylase, as determined by x-ray diffraction.

Preface vii
Reviewers x
Photograph and Illustration Credits xi

PART I The Realm of Biochemistry 1

1 The Scope of Biochemistry 3

What Is Biochemistry? 4
 The Goals of Biochemistry 4
 The Roots of Biochemistry 4
 Biochemistry as a Discipline and an Interdisciplinary Science 7
Biochemistry as a Chemical Science 7
 The Chemical Elements of Living Matter 7
 Biological Polymers and Their Monomeric Components 10
Biochemistry as a Biological Science 14
 Distinguishing Characteristics of Living Matter 14
 The Unit of Biological Organization: The Cell 15
 Windows on Cellular Function: The Viruses 22
New Methodologies in the Biological Revolution 22
The Uses of Biochemistry 23
Tools of Biochemistry 1
 The Electron Microscope 24
 Transmission Electron Microscopy 24
 Scanning Electron Microscopy 24

2 The Matrix of Life: Weak Interactions in an Aqueous Environment 30

The Nature of Noncovalent Interactions 30
 Charge–Charge Interactions 31
 Interactions Involving Permanent Dipoles 32
 Induced Dipole Interactions 34
 Molecular Repulsion at Extremely Close Approach: The van der Waals Radius 34
 Hydrogen Bonds 34
The Role of Water in Biological Processes 36
 The Structure and Properties of Water 36
 Water as a Solvent 38
Ionic Equilibria 41
 Ionization of Water and the pH Scale 41
 Acids and Bases 43
 Titration of Weak Acids: The Henderson–Hasselbalch Equation 44
 Buffer Solutions 47
 Ampholytes, Polyampholytes, and Polyelectrolytes 48
Interactions Between Macroions in Solution 50
References 53
Problems 53
Tools of Biochemistry 2
 Electrophoresis and Isoelectric Focusing 54
 General Principles 54
 Paper Electrophoresis and Gel Electrophoresis 55
 Principles of Separation in Gel Electrophoresis 56
 Isoelectric Focusing 56
 Other Methods 58

3 The Energetics of Life 59

- Energy, Heat, and Work 59
 - Internal Energy and the State of a System 59
 - The First Law of Thermodynamics 60
 - Enthalpy 63
- Reversible and Irreversible Processes 63
- The Direction of Processes: Entropy, Free Energy, and the Second Law 65
 - Randomness and Entropy 66
 - Free Energy 68
 - The Interplay of Enthalpy and Entropy: An Example 68
- Free Energy and Concentration 71
 - Chemical Potential 71
 - Use of the Chemical Potential: Application to Transport Across Membranes 71
- Free Energy and Chemical Reactions: Chemical Equilibrium 73
 - The Free Energy Change and the Equilibrium Constant 73
 - Application of Free Energy Calculations to a Biochemical Reaction 75
- High Energy Phosphate Compounds: Free Energy Sources in Biological Systems 77
 - Coupled Reactions 77
 - High-Energy Phosphate Compounds as Energy Stores 79
- Phosphate Transfer Potential and the Central Role of ATP as a Free Energy Currency 82
 - Phosphate Transfer Potential 82
 - ATP as a Free Energy Currency 83
 - ATP Hydrolysis Under Cellular Conditions 83
 - The Energy Charge 85
- The Importance of Metastability 85
- References* 86
- Problems* 86

PART II Molecular Architecture of Living Matter 89

4 Nucleic Acids 91

- The Nature of Nucleic Acids 91
 - The Two Types of Nucleic Acids: DNA and RNA 91
 - Stability and Formation of the Phosphodiester Linkage 93

- Primary Structure of Nucleic Acids 96
 - The Meaning and Significance of Primary Structure 96
 - Determination of Primary Structure: DNA Sequencing 98
- Secondary Structure of Nucleic Acids 99
 - The Watson–Crick Model: History and Development 99
 - Alternative Nucleic Acid Structures: The Plasticity of the Double Helix 104
 - Z-DNA: A Left Helix 107
 - Polynucleotide Structures in Vivo 108
- Tertiary Structure of Nucleic Acids 111
 - Circular DNA and Supercoiling 111
 - Tertiary Structure in RNA Molecules 114
- Stability of Secondary and Tertiary Structure 115
 - The Helix-to-Random-Coil Transition: Nucleic Acid Denaturation 115
 - Renaturation: C_{0t} Analysis 117
- The Biological Functions of Nucleic Acids: A Preview 118
- References* 121
- Problems* 121
- Tools of Biochemistry 3**
- Determining Nucleic Acid Sequences** 122
- Tools of Biochemistry 4**
- Chemical Synthesis of Oligonucleotides** 126
- Tools of Biochemistry 5**
- An Introduction to X-Ray Diffraction** 128
 - Fiber Diffraction 129
 - Crystal Diffraction 130

5 Introduction to Proteins: The Primary Level of Protein Structure 133

- Amino Acids 133
 - Structure of the α -Amino Acids 133
 - Stereochemistry of the α -Amino Acids 135
 - Properties of Amino Acid Side Chains: Classes of α -Amino Acids 137
 - Modified Amino Acids 141
- Peptides and the Peptide Bond 142
 - Peptides 142
 - Polypeptides as Polyampholytes 143
 - The Structure of the Peptide Bond 145
 - Stability and Formation of the Peptide Bond 146

Proteins: Polypeptides of Defined Sequence 148

From Gene to Protein 150

- The Genetic Code 150
- Translation 151
- Posttranslational Processing of Proteins 152

References 155

Problems 155

Tools of Biochemistry 6

Ways to Isolate and Purify Proteins and Other Macromolecules 156

- Centrifugation 156
- Chromatography 157
- An Example: How to Prepare Myoglobin 160

Tools of Biochemistry 7

Amino Acid Analysis of Proteins 162

Tools of Biochemistry 8

Determination of the N-Terminal and C-Terminal Residues of a Protein 164

- N-Termini 164
