About This Document

This document explains how to install the BEA WebLogic Adapter for SAP for WebLogic Integration 2.1. The BEA WebLogic Adapter for SAP is an application that is installed into the WebLogic Server J2EE application server infrastructure and WebLogic Integration. This adapter quickly and easily integrates your SAP IDocs, RFCs, and BAPIs with WebLogic Integration using Application Integration. Together, the adapter and WebLogic Integration provide all the functionality you need to integrate your mission critical SAP system with other enterprise applications.

This document is organized as follows:

■ Chapter 1, "Installing the Adapter for WebLogic Integration 2.1," describes how to install the BEA WebLogic Adapter for SAP.

Audience

This document is written for system integrators who develop client interfaces between SAP and other applications. It describes how to install the BEA WebLogic Adapter for SAP in order to integrate SAP IDocs, RFCs, and BAPIs with WebLogic Integration. It is assumed that readers know Web technologies and have a general understanding of Microsoft Windows and UNIX systems as well as the WebLogic Integration and WebLogic Server infrastructure.

Related Information

The following documents provide additional information for the associated software components:

- BEA WebLogic Adapter for SAP User Guide
- BEA WebLogic Adapter for SAP Release Notes
- BEA Application Explorer Installation Guide
- BEA WebLogic Server 6.1 installation and user documentation, which is available at the following URL:

```
http://edocs.bea.com/wls/docs61/index.html
```

■ BEA WebLogic Integration 2.1 installation and user documentation, which is available at the following URL:

```
http://edocs.bea.com/wlintegration/v2_1sp/index.html
```

Contact Us!

Your feedback on the BEA WebLogic Adapter for SAP documentation is important to us. Send us e-mail at docsupport@bea.com if you have questions or comments. Your comments will be reviewed directly by the BEA professionals who create and update the BEA WebLogic Adapter for SAP documentation.

In your e-mail message, please indicate which version of the BEA WebLogic Adapter for SAP documentation you are using.

If you have any questions about this version of BEA WebLogic Adapter for SAP, or if you have problems installing and running the BEA WebLogic Adapter for SAP, contact BEA Customer Support through BEA WebSupport at www.bea.com. You can also contact Customer Support by using the contact information provided on the Customer Support Card that is included in the product package.

When contacting Customer Support, be prepared to provide the following information:

- Your name, e-mail address, phone number, and fax number
- Your company name and company address
- Your machine type and authorization codes
- The name and version of the product you are using
- A description of the problem and the content of pertinent error messages

Documentation Conventions

The following documentation conventions are used throughout this document.

Convention	Item	
boldface text	Indicates terms defined in the glossary.	
Ctrl+Tab	Indicates that you must press two or more keys simultaneously.	
italics	Indicates emphasis or book titles.	
monospace text	Indicates code samples, commands and their options, data structures and their members, data types, directories, and file names and their extensions. Monospace text also indicates text that you must enter from the keyboard.	
	Examples:	
	<pre>#include <iostream.h> void main () the pointer psz</iostream.h></pre>	
	chmod u+w *	
	\tux\data\ap	
	.doc	
	tux.doc	
	BITMAP	
	float	

Convention	Item
monospace boldface text	Identifies significant words in code. Example: void commit ()
monospace italic text	Identifies variables in code. Example: String expr
UPPERCASE TEXT	Indicates device names, environment variables, and logical operators. Examples: LPT1 SIGNON OR
{ }	Indicates a set of choices in a syntax line. The braces themselves should never be typed.
[]	Indicates optional items in a syntax line. The brackets themselves should never be typed. Example: buildobjclient [-v] [-o name] [-f file-list] [-1 file-list]
	Separates mutually exclusive choices in a syntax line. The symbol itself should never be typed.
	Indicates one of the following in a command line: That an argument can be repeated several times in a command line That the statement omits additional optional arguments That you can enter additional parameters, values, or other information The ellipsis itself should never be typed. Example: buildobjclient [-v] [-o name] [-f file-list] [-1 file-list]
	Indicates the omission of items from a code example or from a syntax line. The vertical ellipsis itself should never be typed.

1 Installing the Adapter for WebLogic Integration 2.1

This section provides instructions for installing the BEA WebLogic Adapter for SAP with WebLogic Integration. It includes the following topics:

- Before Installing the Adapter
- Understanding the Representation of Paths
- Step 1. Obtaining the BEA WebLogic Adapter for SAP
- Step 2. Extracting JARs and Adjusting the Classpath
- Step 3. Configuring the WebLogic Integration Database for the Domain
- Step 4. Replacing the xmltoolkit.jar File
- Step 5. Updating the BEA License
- Step 6. Deploying the Adapter Using the WebLogic Server Console
- Step 7. Adding the Administrative Server User Name to the Adapter Group
- Next Steps

Before Installing the Adapter

Before you install the BEA WebLogic Adapter for SAP, you must review the *BEA WebLogic Adapter for SAP Release Notes* to ensure that you have the required prerequisite software installed. The *BEA WebLogic Adapter for SAP Release Notes* is available at the following URL:

http://edocs.bea.com/wladapters/doc70/index.html

In order to interact with SAP, you must gather the following SAP-specific connection information and ensure that it is available during the BEA WebLogic Adapter for SAP installation and configuration process:

- SAP Application Server Host Name/Address
- SAP System Number
- SAP Client
- SAP User ID
- SAP Password
- SAP Language

Getting the Java Connector

Before installing the BEA WebLogic Adapter for SAP, you must first download and install the SAP Java Connector on the target platform. Download the SAP Java Connector from the following URL:

http:/service.sap.com/connectors

Note: A valid SAP Service ID is required. For more information, contact your SAP BASIS administrator.

1. After downloading the SAP Java Connector, use WinZip or jar to extract the files to a directory or your choice (for example, d:\sap_rfc on Windows or /sap_rfc on a UNIX system).

- 2. Place the files in the proper locations:
 - On a Windows system, the sapjco.jar file unloads the sapjcorfc.dll
 from the directory in which it is invoked. This file should remain in the same
 directory as the sapjco.jar file. Place the other library file,
 librfc32.dll, in the Windows \system32 directory; for example,
 c:\winnt\system32.
 - On UNIX systems, keep the library files, librfccm and libsapjcorfc, in the same directory with the sapjco.jar file.

Note: The file extensions for these files vary depending on the UNIX platform; for example, on Solaris, the file names are libsapjcorfc.so and librfccm.so.

Understanding the Representation of Paths

Because the location of files in the WebLogic Integration environment depends on options selected during installation and configuration, the conventions that follow are used throughout to represent paths.

- BEA_HOME represents the BEA Home directory specified for your WebLogic installation.
 - For example, if you install the product in the default location on a Windows system, BEA_HOME represents c:\bea.
- WLI_HOME represents the root of your WebLogic Integration installation.

For example:

- If you install WebLogic Integration 2.1 in the default location on a Windows system, WLI HOME represents c:\bea\wlintegration2.1.
- domain is used to indicate the name of a domain.
 - In WebLogic Integration 2.1, preconfigured domains (bpmdomain, eaidomain, wlidomain, and samples) are created as subdirectories of the WLI_HOME\config directory. Therefore, domain may be used to represent the root of a preconfigured WebLogic Integration 2.1 domain as follows:

WLI HOME\config\domain

DOMAIN_HOME represents the complete path to the root of a domain.
For example:

If you install WebLogic Integration 2.1 in the default location on a Windows system, DOMAIN_HOME represents
 c:\bea\wlintegration2.1\config\domain.

Note: WLI_HOME and BEA_HOME (italicized) also represent the corresponding Windows and UNIX environment variables. For example, the literal interpretation of WLI_HOME is %WLI_HOME% for Windows and \$WLI_HOME for UNIX.

Unlike WLI_HOME and BEA_HOME, DOMAIN_HOME is not an environment variable that is set by default in the WebLogic Integration environment.

with WebLogic Integration 2.1. It includes the following steps:

Step 1. Obtaining the BEA WebLogic Adapter for SAP

The BEA WebLogic Adapter for SAP is packaged as an EAR file (BEA_SAP_1_0.ear). You can obtain the software on CD or download it from www.bea.com.

Note: At the time of publication of this document, WebLogic Server 6.1 is unable to explode RAR files (BEA Support CASE number 333672). Use an extraction tool (such as WinZip) to extract the contents of the adapter EAR file,

BEA_SAP_1_0.ear, and add the location of the unpackaged objects to the server's classpath (see Step 2. Extracting JARs and Adjusting the Classpath).

Note: Check the release notes to determine if there are required patches for WebLogic Platform that are specific to your configuration. Contact BEA Customer Support to obtain patches. Information on contacting customer support is in the release notes.

Step 2. Extracting JARs and Adjusting the Classpath

Set the classpath using the procedure appropriate for your system:

- Extracting JARs and Adjusting the Classpath for Windows
- Extracting JARs and Adjusting the Classpath for UNIX

Note: The following procedures reference the SAP Java Connector, which must be obtained from SAP and installed before installing the BEA WebLogic Adapter for SAP. For additional information, see "Getting the Java Connector" on page 1-2.

Extracting JARs and Adjusting the Classpath for Windows

To unzip the adapter JAR files and adjust the classpath on Windows, complete the following steps:

- Use WinZip (or another similar extracting product) to extract the BEA_SAP_1_0.ear file to a directory of your choice (for example, BEA_HOME\adapters\sap).
- 2. Go to the root directory for your domain:

```
cd DOMAIN_HOME
```

Note: You must choose a WebLogic Integration domain that supports application integration functionality.

3. Find the Set Domain Type Data. cmd file.

Here, <code>DomainType</code> is the type of the domain. For example, if your domain is configured to support the development of solutions that employ the full range of WebLogic Integration functionality, it contains the <code>SetwliDomainData.cmd</code> file.

4. Update the following SVRCP environment variable settings to the SetDomainTypeData.cmd file for the domain to include all the JAR files included in the EAR file.

Note: The SVRCP environment variable is used in the SetDomainTypeData script to set the classpath for the java executable.

After the following line:

```
set SVRCP=%SVRCP%;%WLI DOMAIN HOME%\wlai
```

add the following JAR files, which are listed in the order required for the classpath:

```
set SVRCP=%SVRCP%;BEA_HOME\adapters\sap\BEA_SAP_1_0.jar
set SVRCP=%SVRCP%;BEA_HOME\adapters\sap\ibi-edaqm.jar
set SVRCP=%SVRCP%;BEA_HOME\adapters\sap\xercesImpl.jar
set SVRCP=%SVRCP%;BEA_HOME\adapters\sap\xmlParserAPIs.jar
set SVRCP=%SVRCP%;BEA_HOME\adapters\sap\xmltoolkit.jar
REM ==== SAP Java Libraries and DLL's (for JNI Calls) =====
set SVRCP=%SVRCP%;BEA_HOME\adapters\sap\ibi-sapjco.jar
set SVRCP=%SVRCP%;BEA_HOME\adapters\sap\ibi-sapjco.jar
```

Here, BEA_HOME\adapters\sap is the directory specified in step 1, and d:\sap_rfc is the directory in which you downloaded and unzipped the sapjco.jar file. Ensure that the librfc32.dll file is installed in your Windows \system32 directory. For more information on these files, see "Before Using the Adapter with SAP" on page -1.

Extracting JARs and Adjusting the Classpath for UNIX

To extract the adapter JAR files and adjust the classpath on UNIX, complete the following steps:

- 1. Use jar (or another similar extracting product) to extract BEA_SAP_1_0.ear to a directory of your choice (for example, BEA_HOME\adapters\sap).
- 2. Go to the root directory for your domain:

```
cd DOMAIN HOME
```

Note: You must choose a WebLogic Integration domain that supports application integration functionality.

3. Find the Set Domain TypeData. cmd file.

Here, <code>DomainType</code> is the type of the domain. For example, if your domain is configured to support the development of solutions that employ the full range of WebLogic Integration functionality, it contains the <code>SetwliDomainData.cmd</code> file.

4. Update the following SVRCP environment variable settings to the SetDomainTypeData.cmd file for the domain to include all the JAR files included in the EAR file.

Note: The SVRCP environment variable is used in the Set *DomainType*Data script to set the classpath for the java executable.

After the following line:

```
set SVRCP=%SVRCP%;%WLI DOMAIN HOME%\wlai
```

add the following JAR files, which are listed in the order required for the classpath:

```
SVRCP=$SVRCP:BEA_HOME/adapters/sap/BEA_SAP_1_0.jar

SVRCP=$SVRCP:BEA_HOME/adapters/sap/ibi-edaqm.jar

SVRCP=$SVRCP:BEA_HOME/adapters/sap/xercesImpl.jar

SVRCP=$SVRCP:BEA_HOME/adapters/sap/xmlParserAPIs.jar

SVRCP=$SVRCP:BEA_HOME/adapters/sap/xmltoolkit.jar

# ==== SAP Java Libraries and DLL's (for JNI Calls) =====

SVRCP=$SVRCP:/sap_rfc/sapjco.jar

SVRCP=$SVRCP:BEA_HOME/adapters/sap/your unix system/sapjco.jar
```

Here, BEA_HOME/adapters/sap is the directory specified in step 1, and /sap_rfc is the directory in which you downloaded and unpacked the sapjco.jar file. For more information, see "Getting the Java Connector" on page 1-2.

- 5. Update the SetDomainTypeData.cmd file to add the location of the files to the appropriate environment variable.
 - For example, on Windows, add the following to the SetDomainTypeData.cmd file to add the directory to the PATH:

```
REM ===== Add SAP Binaries ====
SET PATH=%PATH%;"%BEA HOME%\adapters\sap\win32"
```

 For example, on Solaris, add the following to the SetDomainTypeData.cmd file to add the directory to the LD LIBRARY_PATH:

```
# ===== Add SAP Binaries =====
LD LIBRARY PATH=$LD LIBRARY PATH:/sap rfc
```

• For example, on HP_UX, add the following to the Set DomainTypeData.cmd file to add the directory to the SHLIB PATH:

```
# ==== Add SAP Binaries ====
SHLIB_PATH=$LD_LIBRARY_PATH:/sap_rfc
```

 For example, on AIX, add the following to the Set DomainTypeData.cmd file to add the directory to the LIB PATH:

```
# ===== Add SAP Binaries =====
LIB_PATH=$LD_LIBRARY_PATH:/sap_rfc
```

Here, /sap_rfc is the directory in which you downloaded and unpacked the sapjco.jar file.

Step 3. Configuring the WebLogic Integration Database for the Domain

If you have not already done so, you must create the WebLogic Integration database tables for your domain. For detailed instructions, see "Configuring the Database for a Domain" in *Starting, Stopping and Customizing BEA WebLogic Integration*, which is available at the following URL:

http://edocs.bea.com/wlintegration/v2 1sp/config/index.htm

Step 4. Replacing the xmltoolkit.jar File

The BEA WebLogic Adapters include a new xmltoolkit.jar file. You must replace your existing WebLogic Integration xmltoolkit.jar file with the new JAR file.

To configure the new xmltoolkit.jar file, follow these steps:

- 1. Rename your original xmltoolkit.jar file to xmltoolkit.jar.old by entering the commands appropriate for your operating system:
 - On a Windows system:

```
cd WLI_HOME\lib
rename xmltoolkit.jar xmltoolkit.jar.old
```

• On a UNIX system:

```
cd WLI_HOME/lib
mv xmltoolkit.jar xmltoolkit.jar.old
```

- 2. Extract the xmltoolkit.jar file from the adapter EAR file into a temporary directory.
- 3. Copy the new xmltoolkit.jar file (extracted in step 2) to the WLI_HOME\lib directory for Windows or the WLI HOME/lib directory for UNIX.

Caution: Simply replacing the xmltoolkit.jar file is not sufficient; you must also make changes to the setenv and SetDomainTypeData scripts as described in the following steps.

- 4. Edit the top-level setenv script and make the appropriate changes for your operating system:
 - On a Windows system, edit the WLI HOME\setenv.cmd script.

Replace the line:

```
set WLICOMMONCP=
with
set WLICOMMONCP=%WLI_HOME%\lib\xmltoolkit.jar
```

On a UNIX system, edit the WLI_HOME/setenv.sh script.

Replace the line:

```
WLICOMMONCP=$WLI_LIB/wlicommon.jar
with
WLICOMMONCP=$WLI_LIB/wlicommon.jar:$WLI_HOME/lib/xmltoolkit.
jar
```

5. Edit the Set Domain Type Data script.

Here, <code>DomainType</code> is the type of domain. For example, depending on the configuration of your domain, locate and edit the <code>SetwliDomainData.cmd</code> or <code>SeteaiDomainData.cmd</code> file.

On a Windows system:

For example, edit the DOMAIN_HOME\SetwliDomainData.cmd script.

```
Replace the line:
```

```
set SVRCP=%WLISERVERCP%;%CMNCP%
with
set
SVRCP=%WLI_HOME%\lib\xmltoolkit.jar;%WLISERVERCP%;%CMNCP%
```

• On a UNIX system:

For example, edit the DOMAIN HOME/SetwliDomainData script.

Replace the line:

```
SVRCP=$WLISERVERCP:$CMNCP
with
SVRCP=$WLI HOME/lib/xmltoolkit.jar:$WLISERVERCP:$CMNCP
```

Step 5. Updating the BEA License

The BEA WebLogic Adapter for SAP cannot be used without a valid software license. If you have downloaded the adapter for evaluation, you must obtain an evaluation license as described on the adapter download page. If you have purchased a license for the adapter, the license file is typically sent to you as an e-mail attachment.

When you have obtained a valid license for the adapter, update your license.bea file by completing the following steps:

1. Save the license file that you obtained with a name other than license.bea, in the BEA_HOME directory. For example, save the file as sap_adapter_license.bea. Use this file as the license_update_file in step 4 of this procedure.

Warning: Do not overwrite or change the name of the existing license.bea file.

- 2. Perform the step appropriate for your platform:
 - On a Windows system, open an MS-DOS session and go to the BEA_HOME directory.
 - On a UNIX system, go to the BEA_HOME directory.

- 3. If it is not already included, add the JDK to your PATH variable by executing the command appropriate to your system:
 - On a Windows system:

```
set PATH=BEA HOME\jdk131 03\bin; %PATH%
```

• On a UNIX system:

```
PATH=BEA_HOME/jdk131_03/bin:$PATH export PATH
```

- 4. Merge the license update file into your existing license by executing the command appropriate to your system:
 - On a Windows system:

```
UpdateLicense license update file
```

• On a UNIX system:

```
sh UpdateLicense.sh license_update_file
```

Here, <code>license_update_file</code> is the name to which you saved the license update file in step 1.

5. Save a copy of your updated license.bea file in a safe place outside the WebLogic Integration and application installation directories.

Step 6. Deploying the Adapter Using the WebLogic Server Console

After the BEA WebLogic Adapter for SAP is installed, it must be deployed to WebLogic Server for your domain (for example, wlidomain).

To configure and deploy an adapter using the WebLogic Server Administration Console:

Start WebLogic Server.

2. Start the WebLogic Server Administration Console in a browser using the following URL:

http://localhost:port/console/

Here, localhost represents the machine on which WebLogic Server is running and port represents the listening port.

For example, http://localhost:7001/console/

3. When prompted, enter the user name and password for the server.

Note: If you have not updated the default login, see "WebLogic Integration Users and Passwords" in *Starting, Stopping, and Customizing WebLogic Integration* at the following URL:

http://edocs.bea.com/wlintegration/v2_1sp/config/getstart.htm

The WebLogic Server Administration Console opens.

Figure 1-1 WebLogic Server Console

4. In the left pane, choose Deployments and then Applications from the navigation tree.

The console displays the Applications window.

Figure 1-2 Applications Window

5. Click the Install a new Application link.

The console displays the Install or Update an Application window.

6. Click Browse to locate the application archive you selected during installation (BEA_SAP_1_0.ear).

Figure 1-3 Locating the Application Archive Window

7. Click Upload to upload the BEA SAP 1 0.ear file.

The console displays the application files currently installed to indicate that the upload is complete and the adapter file is deployed to WebLogic Server.

- 8. You can verify deployment by viewing the adapter configuration, as follows:
 - a. Choose Deployments and then Applications from the navigation tree.
 - b. Click the BEA_SAP_1_0.ear file link.

Step 7. Adding the Administrative Server User Name to the Adapter Group

A user group, adapter, is defined in each domain that supports application integration functionality. Before you create an application view that employs the events or services supported by an adapter, you must add the user name defined for the administrative server to the adapter group.

Note: By default, the adapter group includes the user system. If the user name defined for the administrative server is system, skip this step. For example, if you are starting the server in a preconfigured domain, and you have not modified the default administrative server login, you can skip this step.

To add the administrative server user name to the adapter group, complete the following steps:

- 1. In the left pane of the WebLogic Server Administration Console, choose Security and then Groups from the navigation tree.
 - The console displays groups currently defined for the domain.
- 2. Locate and click the link for the adapter group to display the group definition.

Figure 1-4 Group Definition

- 3. If the administrative server user name is not included in the Members list, enter the user name in the Add Users field.
- 4. Click Apply to add the user name to the group.

The name is added to the Members list.

Next Steps

If you have not already installed the BEA Application Explorer, install it now. See the BEA Application Explorer Installation and Configuration Guide.

When you have successfully installed and deployed the adapter and the BEA Application Explorer, you can log on to the WebLogic Integration Application View Console to create application views that employ events and services supported by the BEA WebLogic Adapter for SAP. For more information, see the BEA WebLogic Adapter for SAP User Guide.
