

ULTRATILE

Designed with a patented “Ultra” wear layer on a molded base to provide unlimited design options, UltraTile® is ideal in weight rooms, since it surpasses the noise and shock absorption qualities of any other fitness floor.

BENEFITS

- The 2-foot by 2-foot by 1-inch tiles can be placed over existing floor
- Easy and fast to install, no adhesive required
- Patented dowel rod fastening system enables system to be moved or tiles to be replaced
- Low life cycle costs
- Fade resistant/wears well
- Easy-to-clean: ECORE's E-Cleaner, vacuum or broom and damp mop
- Pro-performance - athletes perform better, longer, safer
- Sound and shock absorbent
- Slip resistant wet or dry
- Durable
- 15-year warranty

Everlast Fitness Flooring comes in a variety of shapes, sizes, and thicknesses and, in many cases, eliminates the need for an additional acoustical underlayment.

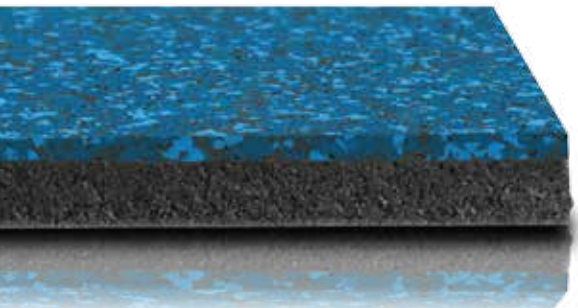

Today's fitness facilities are different than they were in the past. From light weight construction to multi-story gyms and members flinging bulkier weights on the floor, today's gyms must take sound transmission into consideration.

When it comes to weight rooms and building acoustics, foam isn't desirable, because it is not durable and is too soft. On the other hand, plastic is too rigid. Rubber has the perfect combination of resilience and internal damping, drastically reducing the propagation of any heavy impacts and vibrations.

Air space provides superior vibration isolation.

One-inch thick footed tiles surpass noise and shock absorption qualities of any other fitness floor. Can withstand the constant dropping of weights and pounding of equipment while minimizing noise.

5mm or 12mm rubber backing reduces spread of heavy impacts and vibrations.

5mm or 12mm rubber backing. Turf wear layer and rubber backing work together to create an acoustically ideal product: absorptive on top, vibration isolating on bottom.
