

BETE®

ENGINEERED
SPRAYING SOLUTIONS

NOZZLES FOR INDUSTRY, POLLUTION CONTROL, AND FIRE PROTECTION

PERFORMANCE THROUGH ENGINEERING

www.bete.com

Table of Contents

With thousands of different spray nozzles available in hundreds of different materials, it's often hard to know where to start. We've incorporated a number of unique charts and other aids into this catalog to simplify your selection process.

Nozzle Selection Guide

There are many ways to select a nozzle. Which way is right for you?

→ BY SPRAY PATTERN....PP. 2-4

Do you know the spray pattern, but not the type of nozzle?.....see pages 2-4

This section introduces you to the types of spray patterns and the spray nozzles available in each.

→ BY APPLICATION....PP. 5-11

Want to see what nozzles excel at your specific application?.....see pages 5-11

An alphabetical list of common applications and the nozzles that are used most frequently for each.

Still not sure? Don't have time to look? **Call us.** BETE Customer Service Representatives and Applications Engineers will listen to your problem and guide you to the nozzle you need. Let our expertise save you time and keep your process running at peak efficiency.

Innovation is a BETE hallmark and we are proud that over 60% of the nozzles we ship have been customized to meet your needs.

If you don't see your nozzle listed, please call BETE.

Special flow rates and angles are available for most nozzle series.

PERFORMANCE THROUGH ENGINEERING

www.BETE.com

...by SPRAY PATTERN

Full Cone Nozzles

The most frequently used nozzle type in industry is the full cone nozzle. The spray emits from the nozzle in a conical shape with the liquid dispersed over the interior of the cone. When the spray intersects with a surface, a circle of spray is formed with liquid present throughout. The full cone pattern from a spiral nozzle consists of several concentric hollow cones that combine to produce a full cone effect with a smaller droplet size.

TF

The standard spiral line, available in a wide range of flows, angles, and materials. 1/8" - 4" p. 20

TFXP

Same as the TF plus maximum free passage. 3/8" - 4" p. 21

ST

A Cobalt Alloy tip and 316 stainless connection for spraying abrasive liquids. 1/4" - 4" p. 22

STXP

Same as the ST with extra rugged construction plus maximum free passage. 3/8" - 4" p. 23

WL

Low flow rate, full cone nozzles. 1/8" - 1" p. 24

MPL

Low flow, maximum free passage. Unique, S-shaped internal vanes allow free passage of particles. 1/8" and 1/4" p. 25

MaxiPass

Patented MaxiPass "S"-shaped vanes for superior distribution and largest free passage. 3/8" - 4" pp. 26, 27

CW

Low flow rate full or hollow cone, 3-piece construction with optional strainer and cover. 1/8" - 3/8" p. 28

WTZ

Tangential full cone nozzle with 3-piece construction. 1/4" - 1/2" p. 29

EZ

Quick connection system, ramped engagement for automatic alignment. 1/8" - 1/2" p. 30

SF

Snap release nozzle system features clamp-on adapters for easy installation. 1" - 2" p. 31

SC

Metal full cone nozzles available in a wide range of alloys. 3/4" - 6" pp. 32, 33

NC

Complete line of full cone nozzles available in a variety of plastic materials. 3/4" - 6" pp. 34, 35

NCS

"Stubbies"; short NC-type nozzles for use where space is at a premium. 1" - 4" p. 36

NCK

Narrow spray angle injector. 3/4" - 6" p. 37

NCFL

Large plastic nozzles with high flow rates for applications where flanged connections are required. 4" - 12" p. 38

TC

High capacity full cone metal nozzles. 6" - 12" p. 39

Hollow Cone Nozzles

Used less frequently than full cone nozzles, hollow cone nozzles produce a thin ring of liquid. The spray emits from the nozzle in a conical shape with the liquid only at the periphery of the cone. When the spray intersects with a surface, a ring of spray is formed with a hollow center.

WT

Tangential hollow cone nozzle with 2-piece construction. 1/8" - 3/4" pp. 40, 41

WTX

Similar to WT, with design features for extended life. 1/8" - 3/4" pp. 42, 43

CW

Low flow rate full or hollow cone, 3-piece construction with optional strainer and cover. 1/8" - 3/8" p. 44

TF

The standard spiral line, available in a wide range of flows, angles, and materials. 1/8" - 4" p. 45

EZ

Quick connection system, ramped engagement for automatic alignment. 1/8" - 1/2" pp. 46, 47

SF

Snap release nozzle system features clamp-on adapters for easy installation. 1" - 2" p. 48

NCJ

Narrow spray angle injector. 3/4" - 6" p. 49

TH

Larger one-piece tangential hollow cone nozzle. 1" - 3" pp. 50, 51

THW

Same as TH, with wide spray pattern. 1" - 3" pp. 52, 53

Fan Nozzles

These nozzles produce a thin, flat sheet of liquid that expands outward from the nozzle. A thin line of liquid is produced when the spray intersects a surface. As the liquid is concentrated into a smaller net area, the impact force from fan nozzles is greater than from full or hollow cone nozzles.

BJ

Low flow nozzle with interchangeable tips; fan spray. 1/8" - 3/8"

pp. 54, 55

HydroPulse

Pneumatically actuated low flow flat fan nozzle with interchangeable tips. 1/8" - 3/8"

pp. 56-59

NFV

Fan nozzle with integral strainer option. 1/8" or 1/4"

p. 60

NF

Standard fan nozzle featuring high impact fan or straight jet spray. 1/8" - 2"

p. 61

NFD

Flat fan nozzle with self-aligning dovetail connection and interchangeable tips. 1/4" - 1 1/4"

p. 62

NFS

Stubby fan nozzle for use where space is at a premium. 1/4" - 2"

p. 63

FF

Deflector-style; extra-wide angle flat fan spray. 1/8" - 1"

pp. 64, 65

EZ

Quick connection system, ramped engagement for automatic alignment. 1/8" - 1/2"

pp. 66, 67

SF

Snap release nozzle system features clamp-on adapters for easy installation. 1" - 2"

p. 68

SPN

Deflector-style; high impact, narrow fan spray. 1/4" - 3/4"

p. 69

Misting Nozzles

Misting nozzles are characterized by their very small droplet size and relatively small flow rate. The pressure of the incoming fluid is used to drive the atomization process. Higher liquid pressures produce increasingly finer droplets.

MicroWhirl

Low profile and super-fine atomization. 1/8", 1/4", 3/8" - 24UNF

p. 70

PJ

Combines small size and super-fine atomization. 1/8" or 1/4"

p. 71

P

Liquid "impinges" on pin for extra-fine atomization. 1/4"

p. 72

L

A low-flow, spiral nozzle. 1/8" or 1/4"

p. 73

UltiMist

Misting nozzles produce high number of droplets under 60 microns. 1/8" - 1/4"

p. 74

SS

Durable nozzle with multiple fan patterns to provide dense fog. 3/4" - 1 1/4"

p. 75

Air Atomizing Nozzles

Compressed gas, most often air, is used to increase the atomization efficiency of these nozzles. A smaller droplet size for a given liquid flow rate can be achieved with the use of compressed air than can be achieved with nozzles that only use the pressure of the fluid.

XA

Two-fluid nozzles for low flow applications.

pp. 76-93

SAM

External mix/flat fan or narrow round variable coverage, fine control of droplet size.

pp. 94, 95

SpiralAir

Two-fluid nozzles for high flow applications.

pp. 96, 97

Tank Washing Nozzles

These specialized products are customized to the task of cleaning the interior surfaces of tanks. The typical 360° spray pattern covers all internal surfaces while specialized 270° and 180° patterns focus the cleaning fluid on specific surfaces. Models range from basic fixed nozzles to advanced fluid-driven tank cleaning machines.

HydroWhirl S

Slotted, rotating tank washing spray nozzle. Available with ATEX approval for Zone 0. 1/8" - 1-1/2" p. 99

HydroWhirl Poseidon

Rotating tank washing nozzle in PTFE. Ideal for harsh chemical environments. 1/2" - 1-1/2" p. 100

HydroWhirl Orbitor

High impact rotary tank cleaning machine. 360° and 180° wash patterns. 2 or 4 nozzle configurations p. 101

TW

Compact design; fits small openings. Unique patterns that spray in opposing directions. 3/8" & 1" p. 102

CLUMP

A tank washing manifold with 6 large free passage MaxiPass nozzles. 3/4" - 1" p. 103

LEM

A special tank washing assembly with omni-directional spray. 3/4" & 1" p. 104

RTW

Self propelled rotating tank and drum washing nozzle with hard driving fan tips. 3/4" p. 105

Special Purpose Nozzles and Accessories

Applications with very specific requirements require specialized nozzles. Nozzles for fire control, spray drying, submerged tank mixing, the paper industry, and air blowoff are some that require application-specific designs.

FIRE PROTECTION NOZZLES

N

Specially designed for fire protection. Factory Mutual, UL, U.S. Coast Guard, and Lloyd's Register approved models. 1/2" - 1 1/2" p. 106

TF29-180

Ultra-wide fire protection nozzle has full cone spray coverage close to the nozzle 1/2" p. 107

SPRAY DRYING NOZZLES

Twist & Dry

Stainless steel, FDA-compliant nozzles for food processing and spray drying applications. 1/4" - 3/4" pp. 108-111

TDL

Stainless steel, FDA-compliant nozzles with low flow rates for food processing and spray drying applications. 1/8" - 3/8" p. 112

TurboMix

Tank-mixing eductor nozzle. Inherently clog resistant. 3/8" - 8" p. 113

IS

Mounted in pairs for rectangular coverage. 1/16" - 1 1/2" p. 114

LP

Self-aligning, interchangeable family of shower nozzles. p. 115

PSR

Small physical size, hard-driving high velocity, straight jet 9/16" - 24 UNEF p. 116

FINZ

High-impact air fan nozzle, versatile cleaning nozzle. 1/4" p. 117

SJ

Swivel joints allow custom alignment of nozzles without piping changes. 1/4" - 3/4" p. 118

Accessories

Strainers, bushings, adapters, couplings, manifolds, and flanges to complete your installation. p. 119

...by APPLICATION

Choosing the correct nozzle for your application from BETE's 20,000+ products can be daunting. To help, here is a list of some of the more common uses for spray nozzles. Each application is followed by several BETE nozzle series which have been used in this application. The series used most often is listed first.

The operating pressures, flow rate, and spray angle ranges are typical for each application. The full operating range for each series is generally broader.

If you don't see your application, or need advice making a nozzle selection, please **call us** at 413-772-0846.

MATERIALS

BETE manufactures nozzles in hundreds of different materials and combinations of materials. The chart on this page shows the 40 materials most often specified. If you don't know which material is best for your application, BETE Applications Engineering can help you with your selection. Some factors that influence the nozzle material selection process are:

Temperature. Melting or softening of material establishes maximum temperature limits. However, these temperature limits must be reduced when corrosion, oxidation, or chemical attack are also present. See column in blue for general temperature limits for various materials.

Corrosion. Plastics offer superior corrosion resistance at relatively low cost, but can only be used in low-temperature applications. In general, metals can be ranked in the following order of corrosion resistance (from lowest to highest): cast iron, brass, stainless steels, nickel-based alloys, refractory metals and precious metals. Ceramics have excellent corrosion resistance except in very high pH environments.

Chemical attack. There are few general guidelines to this complex subject, but the material used for piping may provide a useful indicator of a suitable nozzle material. If the environment of your

application is known to contain substances which may attack the spray nozzle, contact BETE Applications Engineering for advice. **Abrasion.** Hardened stainless steel, Cobalt Alloy 6, tungsten carbide, and ceramics are commonly used in applications where abrasive fluids are sprayed.

Cost. There are exceptions, but materials can generally be ranked in the following order in terms of cost (from lowest to highest): brass, cast iron, plastics, stainless steels, cobalt-base alloys, nickel-base alloys, ceramics, refractory metals and precious metals.

The BETE logo and MaxiPass are registered trademarks of BETE Fog Nozzle, Inc. ©BETE Fog Nozzle, Inc.

* BETE does not represent that it manufactures its products with materials sold under any of these brand names. Customers sometimes ask for BETE products without using a USA standard specification for the material they require. When materials are described incompletely, with DIN specifications or with a commonly used brand name, BETE will usually supply materials according to the USA specifications listed above. Specifications for forms other than cast or bar may differ from the above.

Since 1950 BETE has put nozzles into deep sea, deep space, and everywhere in between.

BETE nozzles provide life-saving fire protection on offshore oil rigs, clean compact disk masters between platings, cool off the hogs down on the farm, reduce SO₂ emissions at coal-fired generating stations, and even spray relish into huge mixing vats at food processing plants.

Virtually every business uses nozzles—in equipment, manufacturing or fire protection. Their spray droplets can neutralize micron-size pollutants, extinguish fires, cool hot gases, coat delicate electronic components, and much more.

BETE is a pioneer in all areas of nozzle manufacturing. The company was formed to produce John Bete's unique spiral

Nozzles may be a rather small component of major systems. But they are absolutely critical to performance and efficiency.

(corkscrew) nozzle which can deliver a fine, high velocity spray at the lowest possible pressure.

Later, BETE developed the industry's leading clog-resistant design: the MaxiPass® full cone whirl nozzle, which boasts the maximum free passage possible.

More recently, BETE developed the SpiralAir® series of air atomizing nozzles which use compressed air or steam to convert large volumes of liquid into a finely atomized fog.

In each case, these innovations have provided solutions to performance problems encountered with traditional nozzle designs.

In fact, if there's one hallmark to The BETE Difference it's the ability to respond quickly and effectively to any kind of spraying challenge—whether simple or complex—anywhere in the world.

Virtually any material that can be machined, cast or molded can be used to make a nozzle. The selection depends on the fluid being sprayed and operating conditions such as temperature, abrasiveness, and corrosiveness.

John Bete started the company in 1950 in a basement machine shop.

Innovative BETE nozzles have made the company a world-wide leader in the pollution control industry.

The first shower in space was taken by a U.S. astronaut using a special BETE nozzle.

BETE is the only nozzle manufacturer with a complete in-house investment casting foundry.

BETE has always taken advantage of the latest developments in materials technology to create the most efficient nozzles possible. In the late 1960s, the company began experimenting with nozzles made from the ceramic Silicon Nitride Bonded Silicon Carbide (SNBSC) because of its excellent corrosion and abrasion resistance. Later, BETE made the first nozzle out of the even stronger Reaction Bonded Silicon Carbide (RBSC); making the production of ceramic spiral nozzles practical.

In the 1970s BETE pioneered the use of Cobalt Alloy 6, a cobalt-based alloy

with excellent corrosion and abrasion resistance, and has led the way in the use of engineering plastics, particularly PTFE, in nozzle manufacture.

In 1977 BETE made a significant new production commitment by setting up an in-house casting foundry. This established total control of quality and scheduling for orders requiring cast alloys such as Stainless Steel, Cobalt Alloy 6, and Nickel Alloy.

In the late '80s and early '90s BETE became one of the first foundries in the world to cast Nickel Alloy C-22®, a new chromium nickel-based alloy.

When evaluating various materials, it's important to consider the impact of nozzle life on plant efficiency. BETE can help you select the material for maximum effectiveness and operating life in your application.

BETE uses three basic manufacturing processes: injection molding, machining from bar stock, and investment casting. Injection molding is used for large quantities of nozzles made from plastics such as PVC, ABS and PVDF. Bar stock machining is often used for metal alloy and plastic nozzles which have relatively simple shapes or are made in small quantities. Investment casting offers a precise and economical way to produce complex shapes in alloys that are difficult or expensive to machine.

It takes eight minutes to heat 27kg of stainless steel to the 1500°C required for casting.

BETE pioneered the use of many nozzle materials including PTFE and titanium.

Platinum is the most expensive material the company has ever used; every scrap was saved.

Traditional New England craftsmanship in a state-of-the-art manufacturing facility.

BETE can perform every procedure in-house – from casting to machining to assembly.

In addition, BETE offers many specialized processes. The welding department, which is fully qualified to ASME B & PV Code Section IX, has made a specialty of

joining dissimilar metals. This makes it possible to design nozzles combining alloys having superior anti-abrasion or corrosion properties with those having excellent machinability or weldability. Other specialized processes include plasma spray coating, plating, heat treating, grinding,

ceramic fabrication, and filament winding of FRP.

BETE's advanced CIM (Computer Integrated Manufacturing) environment links CAD workstations, a CAM part programming system and CNC machine tools. The computerized scheduling system sequences every step in the production process, constantly adjusting the loads at each workstation to maximize throughput. This makes it possible to manufacture any one

of thousands of products within a short time, while providing reliable delivery forecasts.

When a power company needed spray nozzles to keep the blades clean at their wind turbine farm, they called BETE. When an LPG facility in New Jersey needed to design a water deluge system that met the NFPA recommended coverage density, they called BETE.

Before you buy just any nozzle, give BETE a call. If it's a common application, the company's sales reps or customer service personnel will make sure you're aware of the latest developments and recommendations in the field. If it's a new application (or a new twist to an old one) BETE Applications Engineers will put their years of experience to work helping to determine the best way to provide the spray coverage and performance you need.

BETE also does contract testing of nozzles and spray systems for many customers.

Complete in-house design and manufacturing mean on-time delivery.

A small change in a droplet's size, shape, or speed can have a major impact on performance.

BETE is well known for its ability to find creative solutions to difficult spraying challenges.

You see, BETE's mission goes far beyond just selling nozzles: it is to provide spraying solutions that meet or exceed customer expectations in every detail. Extensive in-house capabilities—from CAD design through pattern testing—make it possible to offer the highest level of quality control throughout every phase of production while providing the most responsive customer service in the industry.

A nozzle's effectiveness is based on the size, shape, velocity, and distribution of its droplets.

The goal of the BETE testing laboratory is to find new ways to help customers maximize performance while using less liquid and lower pumping pressure.

BETE's computer modeling optimizes nozzle selection by taking into consideration the effects of gravity, fluid pressure, gas velocity and distance on spray coverage.

BETE's advanced, computerized Droplet Analyzer can measure in-spray droplets from 2.5 to over 15,000 microns at high velocities. The spray images are illuminated by a

strobe, displayed on a monitor, analyzed, and stored—all in less than one-tenth of a second. Since droplet size has become so critical for many engineered applications, the BETE Droplet Analyzer is often used from the prototype stage through final manufacture to make sure the design meets specifications.

Liquid distribution is just as critical to system design and overall nozzle effectiveness. BETE's high-speed "Patternator" provides detailed information on spray density and coverage at various locations in the spray area and is totally integrated with the Droplet Analyzer, permitting complete and precise measurement of spray performance.

Whether you're working on a new application or a modification, BETE's lab can quickly evaluate your requirements and develop an effective solution.

BETE Applications Engineers provide effective solutions to thousands of nozzle requests every year.

The Spiral TFXP and MaxiPass are the industry's two leading clog-resistant designs.

Computer terminals throughout the plant keep track of the status of your order.

Spray Analysis

The most important function of any nozzle is making your process work correctly. BETE employs multiple methods to analyze nozzle spray characteristics and how they affect your process.

PHYSICAL SPRAY LABORATORY TESTING

There is no better way to determine nozzle performance than to spray it and measure how it performs. BETE's laboratory is capable of fully characterizing single and two-fluid sprays, including flow rate, spray angle, spray coverage, pattern distribution, and droplet size. Droplet size measurement is performed using a video analyzer, providing robust measurement of spherical and non-spherical droplets alike while allowing a straightforward understanding of this complex topic.

BETE's lab capabilities extend beyond just the nozzle to how the nozzle functions in your process. Gas velocity effects on the spray, elevated temperature tests, lifetime determination tests, and material erosions tests are just a few of the ways that BETE Labs is putting its expertise to work for you.

The BETE Droplet Analyzer is capable of characterizing non-spherical droplets like those seen in this actual image.

Actual droplet images captured using the BETE Model 700 Spray Analysis System.

COMPUTATIONAL FLUID DYNAMICS

When duplicating an industrial process for physical testing is not feasible, computational modeling is an effective alternative. Computational fluid dynamics (CFD) software, coupled with actual spray performance data captured in our laboratory, can model a wide variety of systems to predict distribution, velocity, temperature, flow paths, droplet evaporation, wall hit, and almost any physical quantity. CFD lets you know that your process is going to work before you build it.

Spray Lances

Injectors Quills Spools Fabrications

Visit www.spraylances.com for more information.

BETE takes its ability to provide robust spray nozzles one step further to construct spray assembly fabrications that you can install for immediate use.

Refineries and chemical plants have counted on BETE for decades to supply complete fabricated assemblies, custom designed from the nozzle up. Starting with the process conditions, we recommend the most appropriate nozzle and then incorporate it into an assembly that meets all mechanical design criteria.

BETE works to your requirements, from the most simple to the most complex. Incorporation of client specifications is routine for us as is design, fabrication, and inspection to Code requirements. All design and fabrication work is performed at the same facility, ensuring close coordination through all phases of the process to ensure all mechanical and performance requirements are met.

Design Requirements

- ASME B31.3 and B31.1 NBEP
- Welding qualification to ASME B&PVC, Section IX
- Canadian Registration (CRN)
- NACE compliance

Mechanical Inspections

- RT – Radiographic
- UT – Ultrasonic
- PT – Visible Dye Penetrant
- Hydrostatic
- Hardness
- PMI – Positive Material Identification

Performance Inspections

- Flow
- Spray Angle
- Droplet Size
- Special Customer Requirements

LANCES

Drop-in solutions

Whether you call them lances, quills, or injectors, BETE is your source.

Why endure the time and hassle to source pipe, flanges, nozzles, and fittings separately and then coordinate fabrication and testing of the assembly when you can have BETE do it all for you in an ISO 9001-controlled shop environment.

Fabrications are BETE's specialty, from complex Code compliant fabrications to simple pipe and flange assemblies. By using BETE as a single source supplier, you can concentrate on your larger process details, knowing that our experience is working for you.

Steam-jacketed fabrication with three spray nozzles installed through the jacket.

TO ORDER: specify pipe size, connection type, nozzle number, spray angle, and material.

RETRACTABLE LANCES

Maintenance without downtime

Retractable lances allow you to remove a nozzle for inspection or service without taking your process offline. A retractable lance allows you to withdraw your nozzle, isolate it from the process, and then remove it completely for servicing all while maintaining the integrity of the process boundary. Once the nozzle is serviced or inspected, simply reattach it to the system, open the isolation valve, and insert it back into the process.

For smaller pipe sizes, retractable lances can be inserted and withdrawn manually. For larger sizes, or any size where automation or ease of use is required, BETE offers a robust retraction mechanism that effortlessly moves the lance. A simple cordless drill is all that is required to power the unit, making this design a favorite with maintenance crews. The mechanism is flexible in its configuration, allowing alternate electric, pneumatic, or hydraulic power sources to drive the unit.

Complete retractable system including lance, isolation valve, and retraction mechanism

SPOOL SECTIONS

Complete spray solutions

Just as BETE can provide the lance on which the spray nozzle is installed, BETE can also provide the piping section into which the lance is installed. There are many benefits to single-sourcing all components related to the spray nozzle.

When all the work is done by one facility, there are no miscommunications between contractors about size, orientation, or location of the spray ports. The nozzles can be trial fit into the spool piece as part of the manufacturing process before leaving the factory. This translates to no last minute on-site surprises.

BETE provides everything you need from the concept design stage to on-site delivery, right down to the gaskets, studs, and nuts.

TF

Wide Range of Flows and Angles

DESIGN FEATURES

- The original spiral nozzle invented by BETE and continuously improved!
- High energy efficiency
- One-piece/no internal parts
- Clog-resistant performance
- High discharge velocity
- Male connection standard; female connection available by special order

Flow Rate (l/min) = $K \sqrt{bar}$

*Three turn nozzles ** Parallel threads only

Standard Materials: Base and Caps - 316 Stainless Steel; Tip - Cobalt Alloy 6 or RBSC Ceramic. (RBSC not available on nozzle numbers ST6 - ST32).

Spray angle performance varies with pressure. Contact BETE for specific data on critical applications.

TO ORDER: specify pipe size, connection type, nozzle number, spray angle, and material.

STXP

Largest Free Passage

DESIGN FEATURES

- Abrasion resistant
- Cobalt Alloy 6 or RBSC ceramic parts in high-wear areas
- High energy efficiency
- Largest free passage in spiral design
- Extra heavy, rugged construction
- Male and female connections
- Flanged and special connections available as required

SPRAY CHARACTERISTICS

- Fine atomization
- Spray pattern:** Full Cone (Hollow Cone available by special order)
- Spray angles:** 90° and 120° standard
- Flow rates:** 9.67 to 10700 l/min (Higher flow rates available)

3-piece male

FULL CONE

Full Cone 90° (XPN)

Full Cone 120° (XP)

3-piece Male

3-piece Female

2-piece Female

Standard Materials: Brass, 303 Stainless Steel, 316 Stainless Steel, PVC, Polypropylene, and PTFE (1/8" PTFE and Polypropylene not available in 120°).

Spray angle performance varies with pressure. Contact BETE for specific data on critical applications.

MaxiPass® L

Low Flow, Full Cone, Maximum Free Passage

DESIGN FEATURES

- 1/8 and 1/4 pipe connection sizes
- Ultimate clog-resistant design, with the **largest free passage available** in an axial, full-cone nozzle
- Unique, S-shaped internal vanes allow free passage of particles
- High-energy efficiency
- Easily handles dirty, contaminated liquids
- Male connections
- Nozzle body available in Brass, 303, 316 Stainless Steel
- Vanes are 316 Stainless Steel for optimum wear and corrosion resistance

SPRAY CHARACTERISTICS

- High reliability spray performance under the most difficult conditions
 - Uniform spray distribution
- Spray pattern:** Full Cone
Spray angles: Narrow (N), Medium (M), Wide (W)
Flow rates: 0.44 to 7.94 L/min

Flow Rate (l/min) = K (bar)^{0.47} ** Weights given are for 60°, 90° and 120°

Standard Materials: Brass, 316 Stainless Steel, PVC, Polypropylene, and PTFE. (PTFE not available in 3/8" and 1/2" sizes).

*The spray angle of wide and medium angle whirl nozzles is affected by increasing pressure. Contact BETE Applications Engineering when using the MaxiPass above 3 bar (40 PSI).

Spray angle performance varies with pressure. Contact BETE for specific data on critical applications.

TO ORDER: specify pipe size, connection type, nozzle number, spray angle, and material.

A cutaway view of the MaxiPass nozzle showing the S-shaped vanes that enable the nozzle to successfully handle large particles without clogging.

**MaxiPass™
Free Passage**

**Traditional Full Cone
Free Passage**

A comparison of the free passage available with the BETE MaxiPass nozzle compared to the free passage of a traditional full cone nozzle. The BETE MaxiPass is designed to pass solid particles that are 2-3 times larger in diameter than particles that will pass through a traditional full cone nozzle.

For plastic dimensions, please call BETE Customer Service.

Dimensions are approximate. Check with BETE for critical dimension applications.

EZ_{TF WL}

EZ Change Quick Connection System

DESIGN FEATURES

- Nozzles can be changed in seconds without tools
- Three part nozzle, base, gasket and interchangeable tip
- Exclusive ramped engagement for efficient, automatic alignment
- Threaded adapters will accommodate other standard BETE nozzles. Shut-off plugs are also available
- Sanitary EZs are available with weld connection and no knurling

SPRAY CHARACTERISTICS

- Available in six standard tips: EZTF; EZWL; EZWT; EZFF; EZNF; EZSPN

More EZ tips:

Hollow Cone: page 46
Flat Fan: pages 66 and 67

Flow rates: 0.13 to 206 l/min

Spray Angle:

EZTF: 60°, 90°, 120°, 150°, and 170°
EZWL: 30°, 60°, 90°, 120°

SF

Snap Release Nozzle System

DESIGN FEATURES

- Nozzles can be quickly changed and aligned by hand without tools
- Clamp-on adapter fits any style nozzle
- Quick set-up system features special "Snap-in" tips
- Polypropylene, resistant to most acids and alkalis
- Double clamp base or adapter available for higher pressure operation

SPRAY CHARACTERISTICS

- Quick Set-up System can be provided with fan, hollow or full cone spray tips
- Full 45° alignment of spray without tools

More SF Nozzle Systems:

Hollow Cone: page 48
Flat Fan: page 68

Flow rates: 1.61 to 75.6 l/min

Spray angles:

Full Cone: 35°, 65°, 80°

"SNAP-IN"
Full Cone Nozzle Tip

80° Full Cone

CLAMP-ON ADAPTER

- Available for 1", 1-1/4", 1-1/2" and 2" pipe.
- Available with 1/8", 1/4", 3/8", 1/2" NPT female threads; or 1/8" BSP female threads
- Available with single or double clamp.
- **TO ORDER ADAPTER Specify: Pipe Size, thread size, thread type, number of clamps, materials.**

SF Flow Rates and Dimensions

											2"	green	94.0	55.9	62.4

$$\text{Flow Rate (l/min)} = K (\text{bar})^{0.48}$$

Standard Materials: Polypropylene, 302 Stainless Steel clamp, EPDM seal.

Optional Materials: 303 Stainless Steel clamp, Viton seal.

NOTE: Drill 16.7mm (21/32") hole in pipe to install SF.

NOTE: Maximum recommended pressures for SF assemblies: With single clamp 5 bar for 1" pipe; 3.5 bar for 1-1/4" and 1-1/2" pipe; and 2 bar for 2" pipe; with double clamp up to 10 bar.

Spray angle performance varies with pressure. Contact BETE for specific data on critical applications.

SC

Metal Alloy Line

DESIGN FEATURES

- Complete line of full cone nozzles made in cast metal alloys
- Internal removable vane available
- Male and female connections
- Flanged connections available
- For plastic nozzles, see NC (pp. 34, 35), or MaxiPass (pp. 26, 27)

SPRAY CHARACTERISTICS

- **Spray pattern:** Full Cone with uniform distribution. For square spray patterns, please contact BETE.
- **Spray angles:** 60°, 90°, and 120°
- **Flow rates:** 6.25 to 8180 l/min

Male

 Call for the name of your nearest BETE representative.

NC

Threaded Connection/Plastic Material

Male 120°

DESIGN FEATURES

- Complete line of full cone nozzles made of plastic and some bar stock metal alloy materials
- Uniform coverage
- Male and female connections
- Flanged connection available in larger models—see NCFL (p.38)
- For metal alloy nozzles, refer to MaxiPass (pp. 26, 27), SC (pp. 32, 33), or TC (p. 39) Series

SPRAY CHARACTERISTICS

- High flow rates with coarse atomization
- Spray pattern:** Full Cone. For square patterns, please contact BETE.
- Spray angles:** 60°, 90°, and 120° standard
- Flow rates:** 7.50 to 8180 l/min (Higher flow rates available)

Full Cone 60° (N)

Full Cone 90° (M)

Full Cone 120° (W)

Spray angle performance varies with pressure. Contact BETE for specific data on critical applications.

NCS

Stubbies/Minimize Head Space

DESIGN FEATURES

- Takes no more room than pipe plug, yet performs like full-size nozzle
- Small projection
- Can be used with standard pipe couplings to form female nozzle, with elbows to form right angle nozzle, or with tees or crosses for multiple installations
- Male connection
- Metal and plastic materials

SPRAY CHARACTERISTICS

Spray pattern: Full Cone
Spray angles: 70°, 90° and 110° standard
Flow rates: 7.50 to 1596 l/min (Special flow rates available)

Full Cone 90° (M)

Full Cone 110° (W)

Dimensions are approximate. Check with BETE for critical dimension applications.

$$\text{Flow Rate (l/min)} = K (\text{bar})^{0.47}$$

Standard Materials: Brass, 316 Stainless Steel, Polypropylene, PVC and PTFE.

Spray angle performance varies with pressure. Contact BETE for specific data on critical applications.

TO ORDER: specify pipe size, connection type, nozzle number, spray angle, and material.

NCK

Full Cone/Narrow Angle Injector

DESIGN FEATURES

- Narrow spray angles
- High velocity
- Male and female connections
- Flanged connections available

SPRAY CHARACTERISTICS

- Coarse and extremely hard-driving spray with even distribution
- Spray pattern:** Full Cone
Spray angles: 15°, 20° and 30°
Flow rates: 23.1 to 4660 l/min
 (Special flow rates available)

FULL CONE

Dimensions are approximate. Check with BETE for critical dimension applications.

Standard Materials: Brass, 316 Stainless Steel, PVC, Polypropylene and PTFE.

NOTE for PTFE nozzles: if operating temperature is to exceed 150°C or the operating pressure is to exceed the values listed in the table above, please contact BETE Applications Engineering for assistance.

Spray angle performance varies with pressure. Contact BETE for specific data on critical applications.

CALL 413-772-0846
Call for the name of your nearest BETE representative.

NCFL

Flange Connection/Plastic Material

Plastic Flanged

DESIGN FEATURES

- Large internal passages
- Uniform spray coverage
- High flow rates with coarse atomization
- Variety of polymer materials available, offering high corrosion resistance
- For metal alloy nozzles refer to SC (pp. 32, 33) and TC (p. 39)

SPRAY CHARACTERISTICS

Spray pattern: Full Cone
Spray angles: 60°, 90°, and 120°
Flow rates: 350 to 19700 l/min
 (Special flow rates available)

Full Cone 60° (N)

Full Cone 120° (W)

Flanged

Flanged 120°

Dimensions are approximate. Check with BETE for critical dimension applications.

Flow Rate (l/min) = K (bar)^{0.46}

Standard Materials: 316 Stainless Steel.

Spray angle performance varies with pressure. Contact BETE for specific data on critical applications.

WT

HOLLOW CONE

Male Metal

Right Angle/Hollow Cone

DESIGN FEATURES

- Conventional design using tangential whirl method of atomization
- Durable
- Use where a circular pattern is required or in large area multiple installations where there is considerable overlapping of sprays
- Male and female connections
- Large free passage

SPRAY CHARACTERISTICS

Spray pattern: Hollow Cone
Spray angles: 70° to 120°
Flow rates: 0.125 to 145 l/min

Hollow Cone 80°

Hollow Cone 120°

Male

Female

Dimensions are approximate. Check with BETE for critical dimension applications.

Flow Rate (l/min) = $K \sqrt{bar}$

Standard Materials: Brass, 303 Stainless Steel, and 316 Stainless Steel.

Spray angle performance varies with pressure. Contact BETE for specific data on critical applications.

Metal

HOLLOW CONE

Extended Life/Hollow Cone

DESIGN FEATURES

- Tangential whirl
- Oversized body for extended life
- Male and female connections
- Large free passage

SPRAY CHARACTERISTICS

- Spray pattern:** Hollow Cone
- Spray angles:** 70° to 120°
- Flow rates:** 0.13 to 145 l/min

Hollow Cone 80°

Hollow Cone 120°

Dimensions are approximate. Check with BETE for critical dimension applications.

Flow Rate (l/min) = K √ bar

Standard Materials: Brass, 303 Stainless Steel, and 316 Stainless Steel

Spray angle performance varies with pressure. Contact BETE for specific data on critical applications.

HOLLOW CONE

CW

Low Flow

DESIGN FEATURES

- Standard 3-piece construction
- Optional 50- or 100-mesh strainer (refer to page 119 for additional information)
- Protective cover available
- Male and female connections
- Interchangeable spray tips

SPRAY CHARACTERISTICS

Spray patterns: Hollow Cone (H)
For Full Cone, see page 28

Spray angles: 80° and 120°

Flow rates: 0.424 to 8.39 l/min

Male Metal

Full Cone 80° (F)

Hollow Cone 80° (H)

Male

Female

Dimensions are approximate. Check with BETE for critical dimension applications.

Flow Rate (l/min) = K (bar)^{0.47}

Standard Materials: Brass, 303 Stainless Steel, and 316 Stainless Steel

Spray angle performance varies with pressure. Contact BETE for specific data on critical applications.

TO ORDER: specify pipe size, connection type, nozzle number, spray angle, and material.

TF

Wide Range of Flows and Angles

DESIGN FEATURES

- The original spiral nozzle invented by BETE and continuously improved!
- High energy efficiency
- One-piece/no internal parts
- Clog-resistant performance
- High discharge velocity
- Male connection standard; female connection available by special order

SPRAY CHARACTERISTICS

- Wide range of flow rates and spray angles
- Fine atomization

Spray patterns: Hollow Cone

For Full Cone, see page 20

Spray angles: 50° to 180°

Flow rates: 2.26 to 10700 l/min
(Higher flow rates available)

HOLLOW CONE

Flow Rate (l/min) = $K \sqrt{bar}$ *Dimensions are for bar stock, cast sizes may vary. ¹ 25.4 mm for 180°

Standard Materials: Brass, 316 Stainless Steel, PVC, Polypropylene, and PTFE (Poly. not available for TF6 - TF10)

TF8 and TF 24 150° are Factory Mutual approved. Contact BETE for more information.

Spray angle performance varies with pressure. Contact BETE for specific data on critical applications.

HOLLOW CONE

EZ_{TF} WT

EZ Change Quick Connection System

DESIGN FEATURES

- Nozzles can be changed in seconds without tools
- Three part nozzle, base, gasket and interchangeable tip
- Exclusive ramped engagement for efficient automatic alignment
- Threaded adapters will accommodate other standard BETE nozzles. Shut-off plugs are also available

SPRAY CHARACTERISTICS

- Available in six standard tips: EZTF; EZWL; EZWT; EZFF; EZNF; EZSPN

More EZ tips:

Full Cone: page 30

Flat Fan: pages 66 and 67

Flow rates: 0.13 to 206 l/min

Spray Angles:

EZTF: 60°, 90°, 120°, and 180°

EZWT: 70° and 110°

EZTF

120° Hollow Cone

Dimensions are approximate. Check with BETE for critical dimension applications.

SF

Snap Release Nozzle System

DESIGN FEATURES

- Nozzles can be quickly changed and aligned by hand without tools
- Clamp-on adapter fits any style nozzle
- Quick set-up system features special "Snap-in" tips
- Polypropylene, resistant to most acids and alkalis
- Double clamp base or adapter available for higher pressure operation

SPRAY CHARACTERISTICS

- Quick Set-up System can be provided with fan, hollow or full cone spray tips
- Full 45° alignment of spray without tools

More SF Nozzle Systems:

Full Cone: page 31

Flat Fan: page 68

Flow rates: 2.42 - 72.1 l/min

Spray angles:

Fan: 40°, 50°, 65°, 80°, 95°

Hollow Cone: 50°, 65°, 90°

Full Cone: 35°, 65°, 80°

Double Clamp Adapter with Spiral Nozzle

CLAMP-ON ADAPTER

- Available for 1", 1-1/4", 1-1/2" and 2" pipe.
- Available with 1/8", 1/4", 3/8", 1/2" NPT female threads; or 1/8" BSP female threads
- Available with single or double clamp.
- **TO ORDER ADAPTER Specify: Pipe Size, thread size, thread type, number of clamps, materials.**

Single-Clamp Base

"SNAP-IN" Hollow Cone Nozzle Tip

"SNAP-IN" Threaded Swivel Ball

Available with 1/8", 1/4", 3/8", 1/2" NPT or BSP Female threads

Retainer Cap

Double-Clamp Adapter

Single-Clamp Adapter

Dimensions are approximate. Check with BETE for critical dimension applications.

											2"	green	94.0	55.9	62.4

$$\text{Flow Rate (l/min)} = K \sqrt{\text{bar}}$$

Standard Materials: Polypropylene, 302 Stainless Steel clamp, EPDM seal.

Optional Materials: 303 Stainless Steel clamp, Viton seal.

NOTE: Drill 16.7mm (21/32") hole in pipe to install SF.

NOTE: Maximum recommended pressures for SF assemblies: With single clamp 5 bar for 1" pipe; 3.5 bar for 1-1/4" and 1-1/2" pipe; and 2 bar for 2" pipe; with double clamp up to 10 bar.

TO ORDER: specify pipe size, connection type, nozzle number, spray angle, and material.

NCJ

Hollow Cone/Narrow Angle Injector

DESIGN FEATURES

- Narrow spray angles
- High velocity
- Male and female connections
- Flanged connections available
- Available in plastic and metal alloys

SPRAY CHARACTERISTICS

- Spray is coarse and extremely hard-driving
- Spray pattern:** Hollow Cone
Spray angles: 15°, 20° and 30°
Flow rates: 23.1 to 4660 l/min
 (Special flow rates available)

HOLLOW CONE

Hollow Cone 15° Hollow Cone 20° Hollow Cone 30°

HOLLOW CONE

TH

Tangential Inlet/Right Angle

DESIGN FEATURES

- Large free passage
- Clog-resistant; nozzles have no internal parts
- One-piece construction
- Female connection
- Flanged connection available
- Silicon carbide available upon request
- Inlet and outlet are in-line

SPRAY CHARACTERISTICS

- Patented geometry designed to give the most uniform liquid distribution around the periphery of the spray.

Spray pattern: Hollow Cone

Spray angles: Narrow to Medium

Flow rates: 15.3 to 2230 l/min

Metal

Hollow Cone - Narrow Angle

$$\text{Flow Rate (l/min)} = K \sqrt{\text{bar}}$$

Standard Materials: Brass, Carbon Steel, and 316 Stainless Steel

Spray angle performance varies with pressure. Contact BETE for specific data on critical applications.

TO ORDER: specify pipe size, connection type, nozzle number, spray angle, and material.

HOLLOW CONE

Silicon Carbide, Flanged

Note: spray angles are for cast alloy nozzles only; not SNBSC.

Dimensions are approximate. Check with BETE for critical dimension applications.

BJ

Low Flow

DESIGN FEATURES

- Three-piece construction
- Interchangeable spray tips
- Integral strainer available (refer to page 119 for more information)
- Male and female connections

SPRAY CHARACTERISTICS

- Relatively coarse atomization
- Uniform distribution with tapered edges for use in overlapping sprays

Spray pattern: Flat Fan

Spray angles: 0° to 110°

Flow rate: 0.011 to 101 l/min

Metal

Fan 50°

Fan 80°

Dimensions are approximate. Check with BETE for critical dimension applications.

$$\text{Flow Rate (l/min)} = K \sqrt{\text{bar}}$$

Standard Materials: Brass, 303 Stainless Steel and 316 Stainless Steel (for nozzle number BJ01 and higher).

Spray angle performance varies with pressure. Contact BETE for specific data on critical applications.

HydroPulse

Pneumatically Actuated - Flat Fan

DESIGN FEATURES

- Interchangeable flat fan spray tips
- Pneumatically actuated for crisp on/off spray
- Straight through porting for in-series set-up
- Variety of mounting brackets available

SPRAY CHARACTERISTICS

- Relatively coarse atomization
 - Uniform distribution with tapered edges for use in overlapping sprays
- Spray pattern:** Flat Fan
Spray angles: 0° to 110°
Flow rate: 0.084 to 101 l/min

FAN

HP01 Assembly

HP02 Assembly

Easy to maintain; drip-free performance!

- **Fluid Connection Size:** 1/8", 1/4", Female, NPT/BSP
Two fluid ports are standard, allowing for an in-series setup; a plug to seal one port is included.
- **Maximum Fluid Pressure:** 41.3 bar
- **Air Cylinders:** Single-acting spring extend type. Air pressure retracts the rod and allows flow through the nozzle. Removing air pressure extends the rod and seals the nozzle. Double-acting cylinder available upon request.
- **Air Connection Size:** 1/8 Female NPT; 1/8 Female BSP Adapter automatically included when fluid connection is BSP
- **Air Cylinder Pressure:** Minimum: 2 bar^{*}; Maximum: 17.2 bar.
^{*}For larger BJ tips, more pressure may be required to break seal.
- **Frequency Rating:** Up to 180 cycles/minute, with an appropriate solenoid valve (Cv=0.08 minimum).
- **Weights:** HP01 Assembly: 0.59 kg; HP02 Assembly: 0.68 kg
- **Operating Temperature Range:** -26° to 204°C. Nylon Mounting Hardware: 121°C MAX
- **Standard Materials:**

Body: Nickel-plated Brass or 303 Stainless Steel

Internals: PTFE, Viton, 303SS

Air Cylinder: Stainless Steel, Anodized Aluminum, PTFE, and Viton®

Fluid Seals: FDA-compliant Viton®

TO ORDER: specify pipe size, connection type, nozzle number, spray angle, and material.

Dimensions are approximate. Check with BETE for critical dimension applications.

NFV

Fan Nozzle with Integral Strainer Option

DESIGN FEATURES

- One-piece construction
- No internal parts
- Male connection
- Low nozzle maintenance
- Optional removable strainer for easy cleaning

Connections: Male NPT and BSP

Optional Strainer: 50, 100, 200 mesh

SPRAY CHARACTERISTICS

- High impact
- Uniform distribution

Spray pattern: Flat Fan and Straight Jet
Spray angles: 0°, 15°, 25°, 40°, 50°, 65°, 80°, 95°, and 110°

Flow rates: 0.15 to 49.85 l/min
 NFV0067: Max. spray angle available 95°

Metal
Shown with Optional Strainer

Fan 50°

Call BETE to verify spray angle performance at operating pressures above 30 bar.

NFV Dimensions

Flow Rate (l/min) = $K \sqrt{\text{bar}}$ Standard Materials: Brass, 303 Stainless Steel, 316 Stainless Steel, PVC, and PTFE (PTFE not available in nozzle numbers NF025 and under)

Spray angle performance varies with pressure. Contact BETE for specific data on critical applications.

NFD

Dovetail Flat Fan

DESIGN FEATURES

- Dovetail joint guarantees alignment of interchangeable tips
- Dimensionally compatible with other dovetail systems
- Tips offset 5° or 15° for overlapping spray patterns
- Tapered overlapping spray provides uniform coverage
- Male, female and welded connections
- Other sizes available upon request

SPRAY CHARACTERISTICS

- **Spray pattern:** Flat Fan
- **Spray angles:** 20°, 30°, 45°, 60°, 90°, and 120°. Special angles are available on request
- **Flow rates:** 0.159 to 358 l/min

Metal

Fan 45°

Dimensions are approximate. Check with BETE for critical dimension applications.

Flow Rate (l/min) = $K \sqrt{\text{bar}}$ * NPT, BSP, male or female or weldable connections. Dimensions are for male base, female and weldable vary.

Standard Materials: Brass, 303 Stainless Steel, and 316 Stainless Steel Weldable adapters also available in mild steel.

Spray angle performance varies with pressure. Contact BETE for specific data on critical applications.

TO ORDER: specify pipe size, connection type, nozzle number, spray angle, and material.

NFS

Stubby Flat Fan

DESIGN FEATURES

- Extremely short length for minimum projection and maximum clearance
- Produces a flat fan spray pattern available in a variety of spray angles
- Available in straight (parallel) threads only, NPS and G
- Requires gasket to seal connection

SPRAY CHARACTERISTICS

Spray pattern: Fan

Spray angles: 20°, 30°, 45°, 60°, 90° and 120° standard

Flow rates: 0.20 to 951 l/min

Fan 45°

Fan 90°

Metal

Plastic

Dimensions are approximate. Check with BETE for critical dimension applications.

Flow Rate (l/min) = $K \sqrt{bar}$

**Available in straight (parallel) threads only, NPS and G

Standard Materials: Brass, 316 Stainless Steel, 303 Stainless Steel and PVC

Spray angle performance varies with pressure. Contact BETE for specific data on critical applications.

FF

Extra-Wide Angle

DESIGN FEATURES

- One-piece construction
- Clog resistant
- Durable
- All 3/8" FFs in Brass are available with UL approval
- Male connection

SPRAY CHARACTERISTICS

- Extra-wide 145° spray angle
 - Medium-impact spray
 - Spray discharge deflected 75° from inlet axis
 - Coarse atomization
- Spray pattern:** Flat Fan
Spray angle: 105° and 145°
Flow rates: 0.510 to 757 l/min

Plastic

Fan 145°

Metal

Flow Rate (l/min) = $K \sqrt{\text{bar}}$

*Available in 105° only; all others 145°

Standard Materials: 303 Stainless Steel, 316 Stainless Steel, and Brass; Viton gaskets standard.

Spray angle performance varies with pressure. Contact BETE for specific data on critical applications.

www.BETE.com

TO ORDER: specify pipe size, connection type, nozzle number, spray angle, and material.

Dimensions are approximate. Check with BETE for critical dimension applications.

Standard Materials: 303 Stainless Steel, 316 Stainless Steel, and Brass; Viton gaskets standard.

Spray angle performance varies with pressure. Contact BETE for specific data on critical applications.

SF

Snap Release Nozzle System

DESIGN FEATURES

- Nozzles can be quickly changed and aligned by hand without tools
- Clamp-on adapter fits any style nozzle
- Quick set-up system features special "Snap-in" tips
- Polypropylene, resistant to most acids and alkalies
- Double clamp base or adapter available for higher pressure operation

SPRAY CHARACTERISTICS

- Quick Set-up System can be provided with fan, hollow or full cone spray tips
- Full 45° alignment of spray without tools

More SF Nozzle Systems:

Full Cone: page 31

Hollow Cone: page 48

Flow rates: 1.61 to 75.6 l/min

Spray angles:

Fan: 40°, 50°, 65°, 80°, 95°

Hollow Cone: 50°, 65°, 90°

Full Cone: 35°, 65°, 80°

Snap-In Fan Tip

50° Fan

Double-Clamp Adapter

Single-Clamp Base

"SNAP-IN" Flat-Fan Nozzle Tip

"SNAP-IN" Threaded Swivel Ball

Retainer Cap

Available with 1/8", 1/4", 3/8", 1/2" NPT or BSP Female threads

CLAMP-ON ADAPTER

- Available for 1", 1-1/4", 1-1/2" and 2" pipe.
- Available with 1/8", 1/4", 3/8", 1/2" NPT female or 1/8" BSP female threads
- Available with single or double clamp.

TO ORDER ADAPTER

Specify: Pipe Size, thread size, thread type, number of clamps, materials.

Single-Clamp Adapter

Standard Materials: Polypropylene, 302 Stainless Steel clamp, EPDM seal.

Optional Materials: Viton seal.

NOTE: Drill 16.7mm (21/32") hole in pipe to install SF.

NOTE: Maximum recommended pressures for SF assemblies: With single clamp 5 bar for 1" pipe; 3.5 bar for 1-1/4" and 1-1/2" pipe; and 2 bar for 2" pipe; with double clamp up to 10 bar.

Spray angle performance varies with pressure. Contact BETE for specific data on critical applications.

TO ORDER: specify pipe size, connection type, nozzle number, spray angle, and material.

SPN

High Impact/Narrow Fan Spray

DESIGN FEATURES

- One-piece/heavy construction
- Straight-through orifice minimizes clogging
- Machined from bar stock to exacting standards
- Male connection

SPRAY CHARACTERISTICS

- Yields highest impact, narrow, flat spray with least atomization
- Spoon-shaped deflector surface efficiently forms a hard driving spray

Spray pattern: Fan

Spray angles: 15°, 25°, 35°, 40°, 50°

Flow rates: 0.76 to 177 l/min

Fan 50°

Metal

Plastic

Dimensions are approximate. Check with BETE for critical dimension applications.

XA

Low Flow Air Atomizing

The XA nozzle system uses the energy in compressed air to produce highly atomized sprays at low flow rates. There are many interchangeable components that can be assembled to achieve a variety of spraying objectives.

SPRAY SET-UPS

XA nozzles produce eight distinctly different types of sprays, depending on which interchangeable air and fluid caps are selected. The spray type and flow rate are determined by the "set-up" — a specific combination of one air cap and one fluid cap.

Internal Mix Set-ups

Liquid and air streams meet within the nozzle and are mixed together and expelled through the same orifice(s). This internal mixing means the streams are not independent; a change in air flow will affect the liquid flow. This makes precise metering of the liquid more difficult than with an External Mix Set-up. Internal Mix Set-ups are able to produce the finest atomization of any of the XA set-ups, but they are generally not suitable for use with liquids which have a viscosity that is above 200 centipoise.

Cutaway View: Internal Mix Set-up

External Mix Set-ups

The air and liquid streams exit the nozzle independently and are combined and mixed outside of the nozzle. Because there is no connection between the air and liquid lines within the nozzle, the air and liquid flow rates can be controlled independently, allowing precise metering of the liquid. The atomization can be controlled by adjusting the air flow rate — more air produces finer atomization. In most

cases these set-ups do not atomize as finely as Internal Mix Set-ups.

External Mix Set-ups may be used with liquids having a viscosity above 200 centipoise and for abrasive suspensions. BETE Applications Engineers can provide guidance for

Cutaway View: External Mix Set-up

spraying high viscosity liquids.

Siphon Set-ups

Internal and External Mix Set-ups require the liquid to be supplied to the nozzle under pressure from a municipal water supply, pump, or pressure pot. Siphon Set-ups use the flow of compressed air within the nozzle to siphon liquid from a container. Siphon Set-ups are frequently used for spraying additives from a container without the use of a pump. They provide the

D. Clean-out/Shut-off

B. Shut-off

Bold letters (A, B, C, D, E, F) refer to hardware assemblies shown on p. 78.

XA Components & Options

lowest flow rates available in the XA series (as low as 0.38 L/hr). They are generally not suitable for use with liquids having a viscosity above 200 centipoise.

By supplying the liquid under pressure, SR Set-ups may be used with liquids having a viscosity above 200 centipoise. In this case, the liquid flow rate is regulated by the fluid cap, and can be determined by using the EF chart for the specific fluid cap.

BASIC OPERATION

The basic XA nozzle assembly consists of a body, a spray set-up, and a "hardware assembly" that can provide shut-off and clean-out capabilities.

Non-Automatic Operation

The XA00 Square Body is the basic component of a non-automatic XA nozzle. Air and liquid feeds are located at opposite ends, perpendicular to the spray.

The XA03 Body has air and liquid feeds on one side, perpendicular to the spray axis.

The XA05 Body has air and liquid inlets located in-line with the spray. Hardware assemblies cannot be used with the XA05 body.

Hardware Assemblies for Non-Automatic Operation

A. Plug. The minimum option hardware assembly required for XA operation. Provides neither clean-out nor shut-off.

B. Shut-off. Turning the knurled knob will stop the flow of liquid to the nozzle. Should not be used to meter the flow of liquid.

C. Clean-out. Pressing the spring-loaded plunger will force a small diameter rod through the liquid orifice, cleaning any obstruction. Useful for intermittent spraying of a liquid that may dry in the orifice when not in use.

D. Clean-out/Shut-off. Combines functions of hardware assemblies B and C in one unit.

AIR ATOMIZING

TO ORDER: specify pipe size, body style, spray set-up #, hardware and mounting assemblies, and material. See page 78.

XA Components & Options

AUTOMATIC OPERATION

For critical applications which require automatic, no-drip, or high-speed spray shut-off, the XA can be supplied with an air-cylinder-operated shut-off or clean-out/shut-off. These air cylinders provide virtually instantaneous liquid shut-off at rates of up to 180 cycles per minute. *The air cylinders require a minimum of 5.5 bar to run that fast.*

Bodies for Automatic Operation

The XA01, XA02, XA10, and XA11 Round Bodies are rugged, highly reliable, and well-suited to the rigors of high-cycle automatic operation. They have been designed to simplify the feed piping required for installing automatic nozzles by providing a constant location for the air inlet piping. With their neat, professional appearance, they are particularly recommended for OEM applications.

The XA01 Round Body has one inlet for air and one for liquid. Because the air inlet supplies air for both cylinder movement and liquid atomization, spraying during start-up and shut-off is not as crisp and precise as with the XA02. *The XA01 body cannot be used with atomizing air pressure under 2 bar.*

The XA02 Round Body has two inlets for air and one inlet for liquid. One of the air inlets supplies the cylinder and the other supplies

atomizing air. The XA02 body must be used when the air cylinder operates at a different pressure from the atomizing air or where the atomizing air is supplied below 2 bar. *NOTE: The XA00 Square and XA03 Bodies used for non-automatic operation can also be used, with hardware assemblies E or F, for automatic operation. Special design features allow field upgrading to automatic operation.*

The XA10 and XA11 Bodies have a built in air-operated cylinder. The integral cylinder provides a smaller profile for use where space is limited.

Hardware Assemblies for Automatic Operation

E. Air-Operated Shut-off. Removal of air pressure to the cylinder causes a spring-loaded poppet valve actuator to shut off liquid flow.

F. Air-Operated Clean-out/Shut-off. Operation similar to E, but includes a clean-out needle.

SOLENOID VALVES

Electrically operated solenoid valves can be used to control the operation of any XA nozzle. BETE can supply solenoid valves matched to your specific application.

Solenoids for Automatic XA Nozzles.

A 3-way, quick-exhaust solenoid valve is required to operate the E or F hardware assembly. The valve is

located in the line that supplies air to the cylinder, as close to the nozzle as possible. Independent control of the atomizing air of an XA02 or square body requires an additional 2-way solenoid valve.

Solenoids for Non-Automatic XA Nozzles.

Two-way solenoid valves can be used to stop and start the flow of air and liquid to any non-automatic XA nozzle.

FILTERS, REGULATORS AND STRAINERS

For optimum reliability, every XA nozzle should have a strainer and regulator in the liquid feed line and a filter and regulator in the air feed line. Every XA nozzle with a Siphon Feed Set-up should have a filter and regulator in the air line. The size and type of each of these components depends on the application, and can be determined by your BETE sales representative. BETE maintains an inventory of filters, strainers, and regulators that can be supplied with your XA nozzle to ensure reliable operation. These components can be purchased individually or in kit form.

Simple piping and robust design describe this multiple nozzle XA lance.

The XA06 manifold body can be fitted with up to five nozzle setups and is often used for humidification of large areas.

Corrosion-resistant XA in PVC

XA Components & Options

SPRAY EXTENSIONS

The spray set-up can be moved away from the nozzle body by using optional 152mm or 305mm extensions. These allow the spray to be moved closer to the target while keeping the nozzle body and associated piping at a distance.

MOUNTING HARDWARE

In many XA installations the nozzle is supported by the rigid metal pipe that supplies air or liquid. There are several components which can provide support for the XA Bodies when it isn't appropriate to suspend the nozzle from piping; for example, when the nozzle will spray through the wall of a tank or duct, or when the air and liquid will be supplied through flexible tubing. All XA bodies except the XA03 can be used with any of the mounting hardware described here.

Thin Wall 02 Adapter

Three-piece adapter used to support an XA nozzle with the body located outside a tank or duct having a relatively thin (less than 10mm) wall and the spray directed into the interior. To use this adapter, a 27mm diameter hole must be drilled through the wall. This adapter both secures the air cap and attaches the nozzle body to the tank wall.

XA02 with Thin Wall 02 Adapter

Thick Wall 01 Adapter

Similar in design and function to the Thin Wall Adapter, but intended for use with tanks or ducts with walls that are thick enough (10mm or over) to be drilled and tapped for a 3/4" NPT thread.

XA02 with Thick Wall 01 Adapter

Mounting Bracket 03 Adapter

This bracket is used in combination with a Thin Wall Adapter to support an XA nozzle from a 13mm-diameter metal rod. The bracket allows flexibility in aiming the spray.

MATERIALS

Bodies, Fluid Caps, Air Caps, Hardware Assemblies, Mounting Hardware

The standard materials for the XA series are nickel-plated brass and 303 and 316 stainless steels. Other metals and plastics can be supplied on request. See page 12 for a complete material list.

Air Cylinders

The air cylinders used for XA hardware assemblies E and F have rods and cylinders made of stainless steel and end caps made of anodized aluminum. All metal parts in contact with the spray liquid are 316 stainless steel.

Seals

The standard material for XA gaskets is compressed fiber with a neoprene binder. For installations requiring FDA approval, SBR gaskets are available. Other elastomeric and metallic gasket materials can be supplied on request.

The standard material for O-rings in XA automatics is Viton®. Other materials available on request.

XA03 Mounting Bracket

BETE can fabricate XA nozzles into any number of lance assembly variations

Automatic XA nozzles in a manifold configuration used for coating a very wide product

Spray lance (see pages 18, 19) with a right angle XA and quick-connect fittings

XA Components & Options

SYSTEM SET-UPS AND ACCESSORIES

BETE carries a complete line of controls and accessories required for setting up a system using the XA Series nozzles.

Contact your BETE representative for details.

Pressure System Set-up

In a pressure-fed system, the liquid is supplied under pressure to either internal or external mix BETE XA Series nozzles.

Air and liquid regulators control the fluid delivery pressure, while the air filter and liquid strainer ensure that the supplied fluids are of high quality.

Operational control is maintained by manual or solenoid valves used in conjunction with the various hardware assemblies.

Siphon System Set-up

In a siphon-fed system, the liquid is supplied by either a siphon or gravity feed.

An air regulator controls the air delivery pressure, while the air filter ensures that the compressed air is of high quality.

Operational control is maintained by manual or solenoid valves used in conjunction with the various hardware assemblies.

When used as a gravity feed set-up, a positive liquid shutoff capability should be provided.

Filters, regulators, and strainers matched to your XA application are available from stock.

XAAD

Pressure-fed/Int. Mix/Wide Angle Round

DESIGN/SPRAY CHARACTERISTICS

- Internal mix
- Very fine atomization
- 70° Hollow Cone spray pattern
- Moderate forward spray projection

AIR ATOMIZING

TO ORDER: specify pipe size, body style, spray set-up #, hardware and mounting assemblies, and material. See page 78.

XAPF

Pressure-fed/Internal Mix/Flat Fan

DESIGN/SPRAY CHARACTERISTICS

- Internal mix
- Flat fan, wide angle spray patterns (between 80° and 90°)
- Very fine atomization

Dimensions are approximate. Check with BETE for critical dimension applications.

AIR ATOMIZING

CALL 413-772-0846
Call for the name of your nearest BETE representative.

XAEF

Pressure-fed/External Mix/Flat Fan

DESIGN FEATURES

- External mix: allows spraying of viscous materials
- Variable atomization
- Moderate spray angle (60°- 90°)
- Precise metering of the liquid flow rate

1/4" XA EF 150 E

XAER

Pressure-fed/Ext. Mix/Narrow Angle Round

- DESIGN/SPRAY CHARACTERISTICS**
- External mix: allows spraying of viscous liquids
 - Variable atomization
 - Narrow spray angle (10°- 30°)
 - Precise metering of liquid flow rate

Dimensions are approximate. Check with BETE for critical dimension applications.

SAM

External Mix/Flat Fan or Narrow Round

DESIGN FEATURES

- Separate atomizing and fan air lines provide variable coverage and fine control of drop size without affecting liquid flow rates. Higher atomizing air pressure yields finer drop size; higher fan air pressure yields broader patterns
- Pneumatically controlled shut-off and clean-out built in
- External mix; allows spraying of viscous materials
- Liquid flow rates are independent of air
- Precise metering of the liquid flow rate

Standard Materials: 303 Stainless Steel, Blue-gard® gasket, Viton® o-rings

Note: Spray set-ups consist of fluid and air caps. Set-ups are interchangeable but each uses a different needle size.

Air-Operated Clean-out/Shut-off. Removal of air pressure to the cylinder causes a spring-loaded poppet valve actuator to shut off liquid flow and includes a clean-out needle.

Replacement air caps include replacement Blue-Gard® gaskets.

Spray angle performance varies with pressure. Contact BETE for specific data on critical applications.

Dimensions are approximate. Check with BETE for critical dimension applications.

High-flow Air Atomizing

DESIGN FEATURES

- A two-fluid nozzle using any gas as the atomizing fluid
- Three-stage atomization for highest performance
- Designed for high reliability in extremely hostile environments
- Efficient design reduces compressed air consumption

SPRAY CHARACTERISTICS

- Spray patterns:** Full Cone and Flat Fan
Spray angles: 20° to 90°
 (Other angles available by special order)
Flow rates: 2.0 to 80 L/min

1 1/2" SA (Set-up #) - A - 00

AIR ATOMIZING

Narrow Round 20°

Wide Round 90°

Flat Fan 60°

Dimensions are approximate. Check with BETE for critical dimension applications.

Larger sizes and flow rates available upon request.

Offset tip angles available upon request

TO ORDER: specify pipe size, spray set-up #, hardware and material.

The SpiralAir can be configured to fit any installation requirement. The examples shown are just a few of the custom assemblies available. For more information, contact BETE Applications Engineering.

A guide with additional engineering data about the SpiralAir series is available on request.

1" SA (Set-up #) - B - 00

1 1/2" SA (Set-up #) - B - 00

1" SA (Set-up #) - F - 10

Since very small variations in liquid pressure produce large variations in liquid flow, BETE recommends using a metering pump or other flow metering device to control the liquid flow.

Spray angle performance varies with pressure. Contact BETE for specific data on critical applications.

CHOOSING A TANK WASHING NOZZLE

Adequate coverage and effective scrubbing are of prime importance in bottle, drum, and tank washing. Choosing from the variety of tank washing nozzles can be confusing. In selecting BETE nozzles you should consider the following vessel characteristics and nozzle design criteria: size and shape of vessel to be cleaned, vessel opening, type of material to be removed, and spray coverage.

Size and Shape of Vessel to be Cleaned

BETE's tank washing nozzles can be used to clean, wash, and rinse every size vessel from small bottles, moderately sized tanks, to railroad tankers.

The TW series is the best choice for cleaning small bottles, kegs, and barrels due to its compact design. Medium-sized tanks up to 7.9m are best cleaned using the HydroWhirl® S, HydroWhirl Poseidon®, or the CLUMP series because of their omni-directional spray.

Where higher impact and larger coverage is needed, BETE's tank washing machine, the HydroWhirl Orbitor, is the perfect choice.

Tank Washing Nozzle	up to	coverage distance in meters (diameter)												
		2	3	4	5	7	9	12	16	18	20	25+		
TW 12 - 20	1.8m													
TW 1	3.6m													
RTW	4.3m													
CLUMP	4.9m													
LEM	4.9m													
HydroWhirl S	6.0m													
HydroWhirl Poseidon	7.6m													
HydroWhirl Orbitor	40m													

What is ATEX (Ex)?

ATEX is an acronym that stands for 'ATmosphere EXplosible'. At the same time, ATEX is an abbreviation for European Directive 94/9/EC concerning the placement on the market of explosion-protected electrical and mechanical equipment.

All 360° HydroWhirl S nozzles are available with ATEX approval for Zone 0.

Visit www.hydrowhirl.com for more information on our tank washing nozzles.

HydroWhirl® S

Tank Washing - Slotted Spray Nozzle

DESIGN FEATURES

- Cleans more quickly, and uses less water and lower pressure than static tank washers
- Surface finish of 0.8 microns R_a or better: ideal for sanitary applications
- Laser-welded design for durability
- Stainless steel construction - corrosion-resistant material
- Three connections: threaded, clip-on, and welded
- Made from FDA approved materials for use in Clean-In-Place (CIP) applications.

SPRAY CHARACTERISTICS

- Self-cleaning bearings
- Vigorous moving spray action
- Spray Angles: 360°, 90° Down*, 180° Up*, 180° Down, 270° Up, 270° Down, *Not available in all flow rates.

Flow rates: 4.39 – 338 l/min

All 360° HydroWhirl S nozzles are available with ATEX approval for Zone 0.

HydroWhirl® Poseidon®

Tank Washing - PTFE Spray Nozzle

DESIGN FEATURES

- Cleans more quickly, and uses less water and lower pressure than static tank washers
- PTFE construction:
 - Ideal for harsh chemical environments
 - Corrosion resistant
- Four connections: threaded pipe, tube, or DIN clip-on
- Made from FDA-approved materials for use in Clean-In-Place (CIP) applications.

SPRAY CHARACTERISTICS

- Slow spinning, longer spray dwell time on the target surface increases impact over conventional rotating designs
- Complete 360° omnidirectional spray pattern

Flow rates: 14.3 to 307 l/min

HydroWhirl® Orbitor

High Impact Rotary Tank Cleaning Machine

DESIGN FEATURES

- Easily field-serviced to reduce maintenance costs
- Minimum moving parts to extend operating life
- Self cleaning; self lubricating
- High-impact jets; orbital wash pattern = high efficiency cleaning process
- Compact design
- 2 or 4 nozzle configurations = wash pattern variable up to super intense
- Male or female connections

SPRAY CHARACTERISTICS

- 360° wash pattern.
180° patterns available on request
- Variable cycle times
- High impact cleaning

Flow rates: 80 - 600 l/min

Working Pressure: 3 - 10 bar

Materials:

- Housing: 316L
- Nozzle Head: 316L
- Gears: PEEK + 316 SS
- Bushings/Seals: Carbon Filled PTFE

Max. Working Temp.: 95°C

Max. Ambient Temp.: 140°C

Weight: 6 kg

Minimum opening size is 5" for either 2-nozzle or 4-nozzle standard-capacity model.

All HydroWhirl Orbitor tank cleaning machines are available with ATEX approval for Zone 0.

Orbitor 2 nozzle spray pattern

Orbitor 4 nozzle spray pattern

CLUMP

Tank Washing Nozzles

DESIGN FEATURES

- Each nozzle in the stationary cluster is a BETE clog-resistant full cone nozzle of the MaxiPass® series
- Can be supplied with various other BETE nozzles for any desired application
- Female connection

SPRAY CHARACTERISTICS

- Spherical omnidirectional coverage
- Six nozzles arranged in cluster to project spray in all directions

Flow rates: 28.1 to 290 l/min
(Special flow rates available)

Metal

$$\text{Flow Rate (l/min)} = K \sqrt{\text{bar}}$$

Standard Materials: Brass, 316 Stainless Steel, PVC, and PTFE

Spray angle performance varies with pressure. Contact BETE for specific data on critical applications.

TANK WASHING

TO ORDER: specify pipe size, connection type, nozzle number, spray angle, and material.

N

Fire Protection

DESIGN FEATURES

- Simplicity of design
- One-piece/no internal parts
- Clog-resistant
- Three standard pipe sizes—1/2", 1" and 1-1/2"
- Male connection
- Factory Mutual, U.S. Coast Guard, and Lloyd's Register approved models

SPRAY CHARACTERISTICS

- Two spray cones: an outer, wide angle cone and a narrower inner cone combine to give full cone effect

Spray pattern: Full Cone

Spray angles: 90° and 120° standard

Flow rates: 9.67 to 1720 l/min

Nozzle with optional protective cover

Use of blow-off covers requires a pressure of 25 PSI or higher

Full Cone 90°

Full Cone 120° (W)

N6 nozzles protect a propane storage tank from fire and explosion.

N3-N5W: U.S. Coast Guard approved

TF24-150° also available in Factory Mutual approved model (see page 20)

Dimensions are approximate. Check with BETE for critical dimension applications.

N Flow Rates and Dimensions

Standard Materials: Brass and 316 Stainless Steel. All 316SS N series covers are 304 Stainless Steel.

Available in nickel aluminum bronze and titanium, plus other materials on request.

Spray angle performance varies with pressure.
Contact BETE for specific data on critical applications.

All N1-N3W nozzles provided with integral strainer.
Strainer material: 316SS
24 mesh (0.027" opening)

TF29-180

FireBeter: Ultra-Wide Full Cone Coverage

DESIGN FEATURES

- Two-turn spiral
- Ultra-wide spray coverage very close to the nozzle
- One-piece design/no internal parts
- Excellent choice for deluge applications where there is little distance between nozzle and material being protected

SPRAY CHARACTERISTICS

- Wide spray coverage
 - Fine atomization
- Spray patterns:** circular sheet with maximum coverage and excellent atomization
- Spray angle:** 180° extra-wide angle
- Flow rates:** 12.3 to 355 l/min

Full Cone 180°

Dimensions are approximate. Check with BETE for critical dimension applications.

Twist & Dry®

Twist & Dry® Component System

The Twist & Dry component system was developed for the spray dryer industry. The TD-K was next developed as an innovative solution to expand spray dryer capacity up to 689 bar. The patented locking system locks components into place prior to installation. There are many interchangeable swirls and orifice disks available for varying the flow rates of the nozzles. Many materials are also available to allow for high temperature usage without leakage.

SPRAY SET-UPS

Twist & Dry nozzles have almost 1,000 different combinations of swirl and orifice discs to provide exactly the right flow rate and angle for your needs. The spray angle and flow rate are determined by the "swirl/orifice set-up"—a specific combination of one swirl disc and one orifice. To locate the right swirl and orifice combination refer to the following TD-K, Twist & Dry, and TDL pages.

Spray angle is determined by the orifice geometry. Carriers and bodies differ in both material and design to accommodate both high temperature and pressure. The robust design allows for many material choices and combinations.

**TDL Low Flow
Twist & Dry® Assembly**

TD-K High Pressure Series

The TD-K is a high pressure nozzle in the Twist & Dry series. The series includes models TD-7K rated up to 483 bar and the TD-10K rated up to 689 bar.

Side View: TD-K body with PEEK backup ring

Often higher pressures can increase yield and save money. **Please visit www.bete.com/td-k.html.**

Twist & Dry Series

The Twist & Dry is a BETE original design that answers the needs of the spray drying industry. The BETE design offers superior performance as well as an innovative patented locking mechanism. Replace the wear parts of your spray dry nozzles without turning the lances upside down.

The BETE Twist & Dry is designed with the operator in mind. If you operate and maintain a spray dryer, you know just how difficult it can be to replace the nozzle wear parts.

These unique features of the Twist & Dry design makes this chore much easier: fewer parts; rugged design—one piece swirl unit \ greatly reduces breakage of tungsten carbide pieces; easy assembly—the BETE Twist & Dry locking system keeps the swirl chamber and orifice "locked" into position during assembly; Materials—corrosion-resistant 303 Stainless Steel carrier, Tungsten Carbide swirl unit and orifice disk, Viton® O-rings, other materials are available. BETE provides software support, also: users of the Twist & Dry receive free-of-charge computer software that greatly simplifies selecting the correct swirl unit and orifice disk.

TD/TD-K

Twist & Dry® Hollow Cone

DESIGN FEATURES

- Patented locking mechanism for quick and easy change-out and maintenance
- Choose TD-K to operate at high pressures for greater yield capacity
- PEEK backup ring with Viton® 90 O-rings or Silicone for higher temperatures)
- Female-threaded or butt weld pipe connections
- Easy assembly, no special tools required
- Orifice size: 0.864mm through 3.99mm

- Interchangeable swirl and orifice discs for variable patterns and flow rates
- Please visit www.bete.com/td-k.html for more information on the TD-K nozzle

SPRAY CHARACTERISTICS

- Hollow Cone
- Flow rates:** 35.3 to 5,970 l/hr
- Spray angle:** 50°, 55°, 60°, 65°, 70°, 75°, 80°

Check valve available upon request

TDL

Twist & Dry® Low Flow Hollow Cone

DESIGN FEATURES

- Patented locking mechanism for quick and easy change-out and maintenance
- 2-piece body for easy maintenance
- Lower flow rates than the Twist & Dry series
- Female-threaded or butt weld pipe connections
- Orifice size: 0.457mm through 1.47mm
- Interchangeable swirl and orifice discs for variable patterns and flow rates

SPRAY CHARACTERISTICS

- Hollow Cone
- **Flow rates:** 11.3 to 469 l/hr
- **Spray angle:** 70° - 75°

Female

70° Hollow Cone

Pipe Size	Weight (g)
1/4"	119
3/8"	107

Flow Rate (l/hr) = $K \sqrt{\text{bar}}$

Standard Materials: Stainless Steel, Tungsten Carbide. Other materials available.

Spray angle performance varies with pressure. Contact BETE for specific data on critical applications.

TurboMix®

TurboMix® Eductor Mixing Nozzle

DESIGN FEATURES

- Effective, economical way to circulate liquids in closed or open tanks
- No moving parts
- Inherently clog resistant
- Requires minimal maintenance
- Nozzle operation creates multiplying effect on fluid flow
- The volume of discharge liquid will be 3-5 times greater than the motive liquid pumped

SPRAY CHARACTERISTICS

- Cone-shaped plume
- Flow rates:** 26.7 to 12000 L/min (motive)

Metal

Plastic

Dimensions are approximate. Check with BETE for critical dimension applications.

IS

Rectangular Coverage/Mounted in Pairs

DESIGN FEATURES

- Effective wherever rectangular pattern is required
- High energy efficiency
- Low coefficient of discharge and large unimpeded openings
- Excellent clog resistance
- Mounted in opposing pairs
- Male connection

SPRAY CHARACTERISTICS

- Pattern widths of 18" to 120" can be achieved
- Good distribution with pressures as low as 0.035 bar
- Thick bands of droplets from opposing pairs intersect and fall uniformly

Spray pattern: Rectangular

Spray angle: See Pattern Width and Coverage Chart

Flow rates: 1.77 to 649 l/min per pair

Metal

FINZ™

High Impact Fan Air Nozzle

DESIGN FEATURES

- Controlled wide uniform distribution and high impact coverage of compressed air
- Can be mounted individually or side-by-side for greater coverage
- Efficient air flow rates with unique eductor feature
- Safe operation—meets OSHA specifications for noise and deadhead pressure
- 1/4" male connection is molded to fit either NPT or BSP
- Up to 2dB quieter than competing designs

- Rugged construction of Ryton® or ABS plastic. Ryton® rated to 149°C at 3 bar
- Maximum operating pressure 7 bar

SPRAY CHARACTERISTICS

Spray pattern: Fan

Air Flow Rates: 7 to 65 Nm³/h at 0.7 to 6 bar

Dimensions are approximate. Check with BETE for critical dimension applications.

SYSTEM DESIGN

The piping system that supplies the nozzles must be designed to deliver the correct pressure at the nozzle inlet. The following formula

$$P_{\text{Pump}} = P_{\text{Nozzle}} + P_{\text{Pipe Losses}} + \frac{\rho gh}{100000}$$

is useful in estimating the pressure a pump will have to supply to a nozzle system:

where:

- ρ = density of fluid (kg/m³)
[water = 1000 kg/m³]
- g = 9.81 m/s²
- h = height of nozzle above pump (m) - negative if the nozzle is below the pump
- p = pressure (bar)

A chart of pipe friction losses is presented on page 125. In using the chart be sure to look at the *total* system flow if there are multiple nozzles to be supplied by one pipe. Elbows, tees and other pipe fittings (see p. 125) also contribute to pressure loss and can be significant, especially in short, convoluted runs.

SPRAY ANGLE

The spray angle chosen for a particular application depends on the coverage required.

The spray angle for spiral nozzles is relatively stable over a wide range of pressures, while the spray

angle for whirl nozzles tends to decrease as the pressure is increased. For additional information see page 124.

NOZZLE SPRAY PATTERN

The term “Spray Pattern” describes the location and spray density of the liquid emitted from a nozzle. Two examples of pattern measurement are shown above. The height of the curve at any point is the spray density in units of LPM/m².

DROPLET SIZE

Droplet size is often critical. Many processes such as gas scrubbing depend on exposing the maximum possible amount of liquid surface to a gas stream. Other applications require that the droplets be as large as possible, such as when the spray must project into a fast moving gas stream.

Exposing the maximum surface area requires breaking the liquid into droplets as small as possible. To get an idea of how this works, imagine a cube of water with a volume of 1 m³. This cube has a surface area of 6 m². If we now split it in two, we expose some of the inner surface and increase the total surface area to 8 m². Atomizing the liquid into spheres 1 mm (1,000 microns) in diameter would increase the surface area of this gallon of liquid to 6000 m².

A nozzle actually produces a range of droplet sizes from the solid liquid stream. Since it is inconvenient to list all the sizes produced, droplet size (in microns) is usually expressed by a mean or median diameter. An understanding of diameter terms is essential.

Particle Size Spectrum

Research & Development

RESEARCH & DEVELOPMENT

BETE's state-of-the-art **Spray Laboratory** plays a key role in supporting both product R&D and our customer service network.

Equipped with sophisticated video-image processing and digital analysis technology, the Spray Lab makes possible rapid nozzle development and evaluation.

The Spray Lab is also available on a contract basis to provide confidential, quantitative evaluation of nozzle performance. Industrial applications for contract testing range from comparative nozzle performance testing to development of proprietary designs. These capabilities allow our customers to optimize process performance while minimizing capital and operating costs—a winning combination in today's competitive global marketplace.

Spray Laboratory Capabilities

- Flow rate (water) measurements from 0.04 to 7500 l/min
- Flow rate (air) measurements from 0.5 to 2550 Nm³/h
- Pressure measurements to 210 bar
- Automated drop size distribution measurement from less than 2 to greater than 15,000 microns
- Computerized spray distribution analysis
- Two-fluid capabilities up to 2550 Nm³/h air / 3000 l/m water
- 9 m x 15 m x 7 m high test area

DROPLET ANALYSIS

Frustrated by the limited capabilities of laser-based instruments, BETE developed the Model 700 Video Particle Analyzer. This flexible system allows BETE to

characterize the difficult sprays containing significant numbers of large and non-spherical drops often encountered in industrial applications. The Model 700 is a video-imaging system combining a CCD video camera, microscope lens, fast strobed xenon light source, and image processing hardware and software.

PATTERN DISTRIBUTION ANALYSIS

The BETE Patternator is a unique digital video system for accurately analyzing the volumetric distribution of liquid emitted from a nozzle. The system uses a standard tube patternator combined with BETE's custom shape recognition and timing software. From this digitized information, spray density and effective spray angles are calculated.

Because data collection and analyses are handled by computer, the device is very well-suited for handling the large amount of data required for nozzle development and assessment programs.

Consistently and accurately selecting appropriate sampling positions is extremely important when performing drop size analysis. The challenge lies in sampling the spray in such a way that the number and locations of the individual tests chosen present a reasonable representation of the entire spray. Recognizing this, BETE has integrated the patternator with the Model 700 analyzer on a calibrated X-Y-Z positioner and developed a number of sampling protocols for droplet size analysis. These protocols ensure that the reported drop size distributions most accurately reflect the overall

spray performance, thus allowing a high degree of repeatability and confidence.

COMPUTER MODELING AND SIMULATION

There are instances when duplicating the operating environment in the spray lab is impossible. When the nozzle is to be used in a high-temperature or pressure environment or sprayed in a high velocity gas stream, BETE Applications Engineers use computer modeling and simulation software developed in-house to assist in specifying the proper nozzle.

Spray-modeling has also been used to predict spray drift from cooling ponds and dust suppression systems and estimating evaporation rates from disposal ponds.

Working with engineering companies and consulting groups, BETE Engineering taps this modeling and simulation technology to offer customized spray nozzle solutions to some of the most vexing problems facing industry today.

INDUSTRY COOPERATIVE DEVELOPMENT PROGRAMS

BETE has worked closely with major industries in research and development programs addressing personnel safety and environmental protection issues.

BETE has provided technical expertise, computer simulation, testing, and nozzle prototypes in a variety of projects, including:

- fire control aboard offshore drilling platforms
- toxic gas control
- oil spill cleanup
- reducing CFC use in the semiconductor industry

BETE Fog Nozzle, Inc.

Application Information Sheet

FAX: 413 772-6729
 email: appeng@bete.com

Name: _____ Company: _____

Telephone: _____ Company Address: _____

FAX: _____ email: _____ BETE Cust. # _____

Sketch a simple representation of the application below:

<ul style="list-style-type: none"> • What are you trying to accomplish with the spray? 	
<ul style="list-style-type: none"> • What is the available pressure? 	<ul style="list-style-type: none"> • What is the desired material of construction?
<ul style="list-style-type: none"> • What is the flow rate? 	<ul style="list-style-type: none"> • What is the piping material?
<ul style="list-style-type: none"> • What is the desired flow rate? 	<ul style="list-style-type: none"> • What are the size and connection types desired?
<ul style="list-style-type: none"> • What liquid is being sprayed? 	<ul style="list-style-type: none"> • What is the distance from the nozzle to the target?
<ul style="list-style-type: none"> • What is the desired spray angle or coverage? 	<ul style="list-style-type: none"> • What are the environmental conditions surrounding the nozzle?

Conversions & Equations

Q = Flow rate

$$Q = K (P)^x$$

$$P = \left(\frac{Q}{K}\right)^{1/x}$$

$$\left(\frac{Q_2}{Q_1}\right) = \left(\frac{P_2}{P_1}\right)^x$$

P = Pressure SG= Specific Gravity

$$\left(\frac{Q_2}{Q_1}\right) = \sqrt{\frac{SG_1}{SG_2}}$$

Vessel with internal pressure:

$$l/min = K (P_{inlet} - P_{Vessel})^x$$

Terms and Conditions.

Prices quoted are FOB, Greenfield, MA. Terms are Net 30 days for approved accounts. Minimum order is \$50.00 net. A restocking charge of 30% will apply for standard product accepted for return up to one year from the date of purchase. BETE FOG NOZZLE reserves the right to charge interest on past-due accounts. No goods may be returned without prior authorization. Non-Standard items are not subject to return.

BETE FOG NOZZLE reserves the right to make changes in specifications or design at any time without notice. Illustrations shown in this catalog are for information only. **Warranty**—all goods are warranted for good workmanship in accordance with industry standard and will perform in accordance with the products' specification. **Limitation of Liability**—BETE's liability shall be limited to the value of the product billed arising from a purchase order.
