# BUSS 230: Managerial Economics <br> Fall 2011-2012 <br> Assignment 1 <br> Sections 1 to 6 <br> Due Date: Wednesday, November 2, 2011 (in class). 

Instructions: The assignment contains 11 Questions (and 7 sheets). Complete all the questions. The answers should be submitted individually. You are allowed one week to complete this assignment. Assignments are due back in class.

## Question 1

Moving along a demand curve, quantity demanded decreases 8 percent when price increases 10 percent.
a. The price elasticity of demand is calculated to be $\qquad$
b. Given the price elasticity calculated in part (a), demand is $\qquad$ (elastic, inelastic, unitary elastic) along this portion of the demand curve.
c. For this interval of demand, the percentage change in quantity in absolute value is (greater than, less than, equal to) the percentage change in price in absolute value.

## Question 2

Fill in the blanks:
a. When demand is elastic, an increase in price causes quantity demanded to $\qquad$ and total revenue to $\qquad$
b. When demand is inelastic, a decrease in price causes quantity demanded to ——and total revenue to $\qquad$
c. When demand is unitary elastic, an increase in price causes quantity demanded to __ and total revenue to -_
d. If price falls and total revenue falls, demand must be $\qquad$
e. If price rises and total revenue stays the same, demand must be
f. If price rises and total revenue rises, demand must be $\qquad$

## Question 3

Consider the linear demand function $Q=20-0.5 P$
a. Write an expression for the inverse demand function.
b. Write an expression for the total revenue function.
c. Write an expression for the marginal revenue function.
d. Find the quantity, $Q^{*}$, at which total revenue is maximized.
e. Is revenue maximization (in part (d)) an example of a constrained optimization problem?

## Question 4

The Johnson Robot Company's marketing manager estimates that the demand curve for the company's robots in 2008 is:

$$
P=3000-40 Q
$$

Where $P$ is the price of a robot and $Q$ is the number sold per month.
a. Derive the marginal revenue curve for the firm.
b. At what range of prices is the demand for the firm's product price elastic? Justify your answer carefully.
c. If the firm wants to maximize its total revenue, what price should it charge?

## Question 5

Two goods have a cross price elasticity of +1.2
a. Would you describe these goods as substitutes or complements?
b. If the price of one of the goods increases by 5 percent, what will happen to the demand for the other product, holding constant the effects of all other factors?

## Question 6

The demand for renting motorboats in a resort town has been estimated to be $Q_{d}$ $=5,000-50 P$, where $Q_{d}$ is the quantity of boats demanded (boat-hours) and $P$ is the average price per hour to rent a motorboat. If this relationship holds true in the future:
a. How many boat-hours will be demanded at rental price of $\$ 10, \$ 20$, and $\$ 30$ per hour?
b. What is the arc price elasticity between $\$ 10$ and $\$ 20$ ? Between $\$ 20$ and $\$ 30$ ?
c. What is the point price elasticity at $\$ 10, \$ 20$, and $\$ 30$ ?

## Question 7

Given the following demand schedule:

| Price <br> $\mathrm{P}(\$)$ | Quantity <br> $\mathrm{Q}_{\mathrm{d}}$ (pounds of <br> steak) | Arc Elasticity <br> $\mathrm{E}_{\mathrm{d}}$ | Total Revenue <br> (\$) | Marginal <br> Revenue <br> (\$/Unit) |
| :---: | :---: | :---: | :---: | :---: |
| $\$ 12$ | 30 | NA |  | NA |
| 11 | 40 |  |  |  |
| 10 | 50 |  |  |  |
| 9 | 60 |  |  |  |
| 8 | 70 |  |  |  |
| 7 | 80 |  |  |  |
| 6 | 90 |  |  |  |
| 5 | 100 |  |  |  |
| 4 | 110 |  |  |  |

Compute the associated arc elasticity, total revenue and marginal revenue values.

## Question 8

The general linear demand for good $X$ is estimated to be

$$
\mathrm{Q}=250,000-500 \mathrm{P}-1.50 \mathrm{M}-240 \mathrm{P}_{\mathrm{R}}
$$

Where $P$ is the price of good $X, M$ is average income of consumers who buy good $X$, and $P_{R}$ is the price of related good $R$. The values of $P, M$, and $P_{R}$ are expected to be $\$ 200, \$ 60,000$ and $\$ 100$, respectively. Use these values at this point on demand to make the following computations.
a. Compute the quantity of good $X$ demanded for the given values of $P, M$, and $P_{R}$.
b. Calculate the price elasticity of demand $E_{p}$. At this point on the demand for $X$, is demand elastic, inelastic or unitary elastic? How would increasing the price of $X$ affect total revenue? Explain.
c. Calculate the income of elasticity of demand $E_{M}$. Is good $X$ normal or inferior? Explain how a 4 percent increase in income would affect demand for $X$, all other factors affecting the demand for $X$ remaining the same.
d. Calculate the cross-price elasticity. $E_{X R}$ Are the goods $X$ and $R$ substitutes or complements? Explain how a 5 percent decrease in the price of related good $R$ would affect demand for $X$, all other factors affecting the demand for X remaining the same.

## Question 9

The estimated market demand for good X is:

$$
\hat{Q}=70-3.5 P-0.6 M+4 P_{Z}
$$

Where $\hat{Q}$ is the estimated number of units of good $X$ demanded, $P$ is the price of the good, $M$ is income, and $P_{Z}$ is the price of the related good $Z$. (all parameter estimates are statistically significant at the $1 \%$ level.)
a. Is $X$ a normal or an inferior good? Explain.
b. Are $X$ and $Z$ substitutes or complements? Explain.
c. At $P=10, M=30$, and $P_{Z}=6$, compute estimates for the price $\left(E_{P}\right)$, income ( $E_{M}$ ) and cross-price elasticities ( $E_{X Z}$ ).

## Question 10

A linear market demand function of the form

$$
\mathrm{Q}=\mathrm{a}+\mathrm{bP}+\mathrm{cM}+\mathrm{d} P_{R}
$$

Was estimated using regression analysis. The results of this estimation are as follows:

| DEPENDENT VARIABLE: Q | R-SQUARE | F-RATIO | P-VALUE ON F |  |
| :--- | :--- | :--- | :--- | :--- |
| OBSERVATIONS: 24 | 0.8118 | 28.75 | 0.0001 |  |
|  | PARAMETER | STANDARD | T-RATIO | P-VALUE |
| VARIABLE | ESTIMATE | ERROR |  |  |
| INTERCEPT | 68.38 | 12.65 |  | 0.0001 |
| P | -6.50 | 3.15 | 0.0492 |  |
| M | 0.13926 | 0.0131 |  | 0.0001 |
| PR | -10.77 | 2.45 | 0.0002 |  |

a. Is the sign of $\hat{b}$ as would be predicted theoretically? Why?
b. What does the sign of $\hat{c}$ imply about the good?
c. What does the sign of $\hat{d}$ imply about the relation between the commodity and the related good R?
d. Are the parameter estimates $\hat{a}, \hat{b}, \hat{c}$, and $\hat{d}$ statistically significant at the $5 \%$ level of significance? Use both $t$-statistics and $p$-values to test the hypotheses.
e. Using the values $\mathrm{P}=225, \mathrm{M}=24,000$ and $P_{R}=60$, calculate the estimates of:

1. The price elasticity of demand $\left(E_{p}\right)$.
2. The income elasticity of demand $\left(E_{M}\right)$.
3. The cross price elasticity ( $\mathrm{E}_{\mathrm{XR}}$ ).

## Question 11

Wilpen Company, a price-setting firm, produces nearly 80 percent of all tennis balls purchased in the United States. Wilpen estimates the U.S. demand for its tennis balls by using the following linear specification:

$$
\mathrm{Q}=\mathrm{a}+\mathrm{bP}+\mathrm{cM}+\mathrm{d} P_{R}
$$

Where $Q$ is the number of cans of tennis balls sold quarterly, $P$ is the wholesale price Wilpen charges for a can of tennis balls, M is the consumers' average household income, and $P_{R}$ is the average price of tennis rackets. The regression results are as follows:

| DEPENDENT VARIABLE: Q | R-SQUARE | F-RATIO | P-VALUE ON F |  |
| :--- | :--- | :--- | :--- | :--- |
| OBSERVATIONS: 20 | 0.8435 | 28.75 | 0.001 |  |
|  | PARAMETER | STANDARD | T-RATIO | P-VALUE |
| VARIABLE | ESTIMATE | ERROR |  |  |
| INTERCEPT | 425120.0 | 220300.0 |  | 0.0716 |
| P | -37260.6 | 12587 |  | 0.0093 |
| M | 1.49 | 0.3651 |  | 0.0009 |
| PR | -1456.0 | 460.75 | 0.0060 |  |

a. Discuss the statistical significance of the parameter estimates $\hat{a}, \hat{b}, \hat{c}$, and $\hat{d}$ using both t -statistics and p -values. Are the signs of $\hat{b}, \hat{c}$, and $\hat{d}$ consistent with the theory of demand?

Wilpen plans to charge to charge a wholesale price of $\$ 1.65$ per can. The average price of a tennis racket is $\$ 110$, and the consumers' average household income is $\$ 24,600$.
b. What is the estimated number of cans of tennis balls demanded?
c. At the values of $\mathrm{P}, \mathrm{M}$ and $P_{R}$ given, what are the estimated vales of the price $\left(E_{P}\right)$, income $\left(E_{M}\right)$, and the cross price elasticity of demand ( $E_{X R}$ ).
d. What will happen, in percentage terms, to the number of cans of tennis balls demanded if the price of tennis balls decreases 15 percent?
e. What will happen, in percentage terms, to the number of cans of tennis balls demanded if average household income increases by 20 percent?
f. What will happen, in percentage terms, to the number of cans of tennis balls demanded if the average price of tennis rackets increases by 25 percent?
