BRAKE ALIGN

LATERAL RUNOUT CORRECTION PLATES

Fix it Right,
the First Time

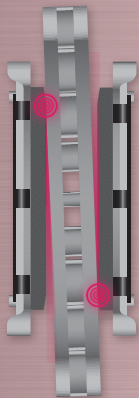

The revolutionary BRAKE ALIGN™ Runout Correction Plates provide the **simplest, least costly, most effective** solution to correcting lateral runout.

Watch the BRAKE ALIGN™ installation video at:
www.nucap.com/brake_align_video.php

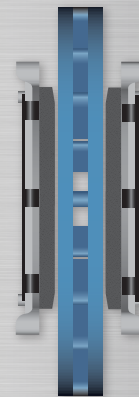

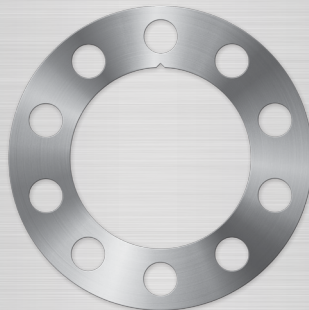

Lateral runout is generated by the stacked tolerances between the hub assembly and brake rotor flange.

IMPACT:

- Brake pulsation
- Steering wheel vibration
- Increased stopping distances
- Increased brake wear
- Noise

Lateral runout can be corrected in less than five minutes per wheel. Runouts up to .009 over specification can be corrected without the need for a costly wheel hub bearing replacement or the use of an On-The-Car Brake Lathe. Does not involve cutting a new rotor (which can affect the integrity of the rotor and surface condition).

RESULTS:

- Eliminate "comebacks"
- Extend brake and rotor life
- Address lateral runout symptoms
- Save time
- Save money
