- They are **made of wood**;
- The spherical shape is the most **energy efficient shape**, since it gives the highest volume:surface area ratio.
- **Strength** – The triangle is the basic structural unit providing the greatest stability, and therefore it is the basic unit of the structures we offer;
- Have **natural aerodynamics and self-cleaning advantage** (snow);
- **Easy and fast anchoring** – does not require either concrete steps or digging;
- **Easy and enjoyable assembly** and dismantling *;
- Fast and easy to maintain;

- **Durability** – we apply a special impregnation to the wood and zinc coating to the metal elements;
- **Cover of three-ply greenhouse polyethylene, cut to shape in advance and assembled ****. Its putting in place is fast and does not require perforation, which ensures strength, reliability and long life;
- **Wide enough door for a trolley to pass through**;
- **Special bio-energy properties** – the domes are specific energy structures – they realize the functions and principles known since ancient times and have a beneficial effect on all living organisms.

** We can lend you a complete set of tools needed for assembling, and if you prefer, we can install the greenhouse at the location you have specified. The cost of installation is calculated on the spot.*

*** From us you can also buy spare covers and parts for replacement after the included in the set get worn out.*

Advantages of Dome Greenhouses

Why domes?

- They bring **natural beauty and harmony**. Plants, being living organisms, feel and react to the specific environment created by the Dome greenhouse.
- The domes, due to their spherical shape, are the **most energy efficient structures**. They have the highest volume : surface area ratio – they surround the largest space with the smallest covering area, which means **minimal heat loss**.
- They can **cover a large usable area without internal supports**, which get in the way, because the triangular geodesic dome structure is **uniquely strong and self-sustaining**. The high arches and the free space in the dome provide a **better sense of freedom and openness**. They provide **better air circulation and heat distribution** during the winter, respectively cooling in summer.
- Their aerodynamic characteristics, thanks to the closed streamlined form, make **them excellent for regions with strong winds**. They can withstand storms and hurricanes much better than conventional square structures.
- Their **synergistic structure** (a number of separate parts, functioning as a as a unified whole) gives them exceptional endurance to the climatic conditions. They are more **resistant to snow loads**, because they have sloping surfaces and self-cleaning properties, and therefore snow cannot accumulate in critical quantities.
- Apart from the practical qualities, the ancient people worshipped the domes as special energy- and sacred structures, which embody universal symbolic and geometric principles. From humble dwellings to magnificent temples – the domes have been used all over the world for thousands of years.

Your greenhouse dome can turn into a tropical garden with a fountain, a lake and a controlled environment with optimal growing conditions for plants. It is ideal for protecting them from the harsh weather conditions – you can grow vegetables, spices and flowers even when it is too cold outside, collect three harvests or create space for year-round cultivation. Provide natural food for your family and friends.

"This is much better than anything I've ever seen before... I have studied this investment quite thoroughly and my impression was that the dome shape was unique. After I have assembled the greenhouse, I was very pleased with my choice! It fits my style perfectly because I prefer natural materials. I love the way I feel when I'm inside. I notice that in this round structure the peppers, cucumbers, flowers and especially the tomatoes grow more vigorously than in my existing conservatory! With friends we joke that here tomatoes grow like cucumbers-they reach the ceiling and I have to turn them back! I'd like to explore why... Alexander K.

THE DOMES

– structures which give many possibilities:

The dome-shaped greenhouses are just one of many possibilities! A Gazebo Dome or Solarium is a nice place to rest, read, meditate or share with friends. Its round shape without columns, corners that break and hinder the space, makes them **great for team building events, seminars, Yoga, Dancing, Gymnastics and Sports.**

The domes themselves are works of art and create a predisposition to creativity and good humor. They are ideal, demanded at **festivals, exhibitions, art workshops, stages, conference halls** etc ...

The Domes for their innovative forms attract the public, so they are good for pavilions and spaces for **publicity, attraction for tourism,** attractive gazebos or reserved for bars and restaurants, Cozy Resto, **Lounges for beach bars** and much more.

For lovers of DIY (Do it yourself):

Our dome structures are ideal for DIY fans, adaptable to the architectural plans for villas and holiday villages, for a creative studio, mountain hut, wedding arch and chapel, shaded roof for the pool or beach,...

You can place the dome on a wooden platform or concrete base, brick or concrete perimeter wall or just lying on the ground. You can make a very attractive landscape in your garden using the structure as a sculpture or as a grape vine trellis or a pergola for other climbing plants. You can also use a dome as a cage for domestic animals, birds, butterflies, or as a dome as a spherical projection screen, etc... For your creative impulse we offer new horizons not only in words but also in real material forms.

Caring for the Nature:

Our production is located in Bulgaria. We use wood that comes from a regulated size for the maintenance of natural forests in the Balkans, "The lung of Europe". That allows us to maintain very reasonable prices and at the same time take care of our nature, because the future of our children depends on us!
