NOTES

SLU1, Single wire sensor: this type has no heater circuit and is earthed through the body of the sensor and sends the signal out to the ECU in the single wire normally black in colour.

Normally fitted to older vehicles up to about 1995 depending on make and model.

SLU3, Three wire sensor: this type has a heater circuit and one of the wires is the heater 12 volt supply normally white in colour and the other wire is the heater ground which is grounded through the ECU is also normally white in colour and the third wire is the signal wire which is normally black in colour. Also only fitted on older vehicles.

SLU4, Four wire sensor: this type also has a heater circuit and one of the wires is the heater 12 volt supply normally white in colour and the other wire is the heater ground which is grounded through the ECU also normally white in colour and the third wire is the sensor earth which is normally earthed through the ECU normally gray in colour and the fourth wire is the signal wire normally black in colour

As mentioned above the wire colours are normally as follows

White = heater circuit

White = heater circuit

Gray = sensor earth

Black = signal wire

And this is the case most of the time but sometimes some Japanese, and some Opel's and some French cars use different colours as follows

	Type 1	Type 2	Type 3	Type 4	Type 5
Heater Circuit	Black	Black	Brown	Red	Purple
Heater Circuit	Black	Black	Brown	Black	White
Sensor Earth	White	Green	Beige	Tan	Grey
Signal Wire	Blue	White	Purple	Purple	Black
