Quality. Experience. Technology.

EEMANN TECH is a Company that was founded by experts with extensive experience and knowledge in the IPSC arena. This knowledge was gained by being actively involved in the organizational roles of IPSC matches as well as taking part as competitors in the highest level of international competitions.

The main field of our activity is manufacturing and supplying the market with high quality spare and tuning parts, paper and steel targets and accessories for IPSC sports.

We are constantly developing and expanding the range of products to satisfy all our Customers requirements. If you have any questions please feel free to contact us.

We are here for You!
The EEMANN TECH team.

OUR MISSION

Our mission is to satisfy our Customers needs with quality products and professional services. We combine modern technology, performance standards, and long-term experience to deliver products of high quality and precision.

We are here to take care of all your needs and assist you in gaining the highest achievements.

OUR GOAL

Our goal is to assist competitors to achieve best results.

COOPERATION

If you are interested in cooperation and want to become a dealer in your region, please feel free to send us your questions, offers and requests to the following email: export@eemann-tech.com.

We are always open for cooperation and ready to answer any questions you have!

Everything is Possible

SPRINGS

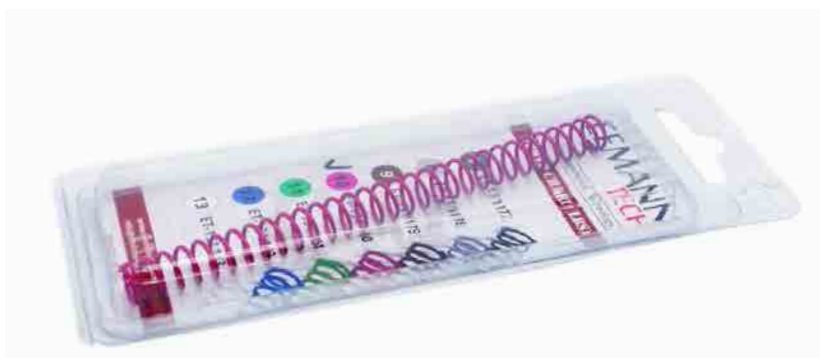

We offer wide selection of tuning and factory-power springs for the most popular pistol models in IPSC practical shooting: Colt 1911/2011, CZ, Glock, Tanfoglio, Sphinx, Sig Sauer, Springfield XDM and other.

Each competitor can customize their shooting equipment using EEMANN TECH parts according to their needs and division requirements. We have all the parts you need for your handguns to match the factory parameters and usual functioning using EEMANN TECH factory-power springs or make them highly customized by using the EEMANN TECH tuning springs.

Thanks to advanced technologies our springs have an increased service life.

Not only do we have single springs, but we also offer spring sets. There are sets of standard and competition springs for different pistol models and kits of springs with different power values. All springs are labelled and packed accordingly.

The Eemann Tech Progressive Recoil Spring for 1911/2011

A **Wide Selection** For Every Preference

Eemann Tech Progressive Recoil Spring

The Eemann Tech Progressive Recoil Spring for 1911/2011 differs from the factory recoil spring in distance between coils. The progressive recoil springs coils are constantly reducing from the center to the end of the spring. The first part of the spring has standard factory coil gaps and is the strongest part.

The part with the “factory” coil gap starts compressing first and after the first coils impact the second part with “progressive” coil distance, they join together for faster recoil reducing to zero.

At the end of the compression cycle, the progressive recoil spring’s power is ~10% greater than the declared value. As a result, if you use a weaker spring, the springs capacity remains same. Every spring’s power value is indicated by a unique color, that allows identifying the spring’s original power at any moment of its life.

The Eemann Tech Progressive Recoil Springs are painted by a special polymer paint with thermal treatment, which remains elastic throughout the life of the spring. There are special calibration packs for different types of handguns / IPSC divisions. Every calibration pack contains 4 springs of different power, for more precise calibration of the handgun for individual types of ammunition.

For maximum efficiency, it is recommended to use the Eemann Tech Progressive Recoil Spring with Eemann Tech Recoil Buffer (Reference code: ET-303011).

The Eemann Tech Progressive Recoil Spring has power selection from 6-18 lbs. This variety of spring power values allows the use them with any type of handguns from OPEN division (6-7 lbs) to the Classic Major .45 caliber and factory ammunition with a light bullet (18 lbs).

When installing the Eemann Tech Progressive Recoil Spring, the strengthened part of the spring should be directed towards the chamber.

EEMANN | GUN PARTS

TECH

PARTS

The EEMANN TECH Company produces standard and tuning parts for the most popular IPSC handguns, shotguns, and rifles amongst IPSC competitors: 1911/2011, CZ, GLOCK, Sig Sauer, Sphinx, AR15 and other firearm models and types.

We make spare parts of which the quality is excellent and exceeds the factory-made standard.

We pay special attention to the tuning parts. While developing parts we use the long-term experience of the best IPSC competitors around the world. All parts are made of high quality materials using modern and advanced technology.

Every competitor is able to customize their shooting equipment using the EEMANN TECH parts according to their needs and division. We have everything for making handguns meet the factory parameters using EEMANN TECH classic-line spare parts or make them highly customized by using the EEMANN TECH tuning-line parts.

We produce trigger mechanisms, enhanced slide stops and thumb safties; sport extended magazine catches, front and rear sights; main, trigger, sear and recoil springs, recoil spring guide rods and many other parts that are needed and wanted among the competitive shooters all over the World.

All parts are labeled and packed accordingly.

All EEMANN TECH parts are fully CNC-machined (MIM FREE).

EEMANN | TARGETS TECH

TARGETS

The EEMANN TECH Company produces different kinds of targets for practical and other action shooting disciplines. The selection of EEMANN TECH targets covers IPSC, IDPA, USPSA, ISSF, Target Shooting and Tactical Disciplines.

Cardboard targets are the “expendable material” for any kind of competition from Level I to World Shoots, Club team practices, individual training, and master classes. You can never have enough targets! The EEMANN TECH Company produces cardboard and paper targets for in-door shooting galleries and open-air shooting ranges.

In addition to the target selection EEMANN TECH offers different types of target patches.

Our patches are made of water- and frost-resistant material. Specially designed for the IPSC/IDPA and their type of targets. The 20 mm patches are meant for patching hits from handgun, rifle shots or shotgun buckshots. The 30 mm patches are meant for rifle shots starting from caliber 7.62 mm. The 40 mm patches are meant for patching hits from shotgun slugs. The range of EEMANN TECH patches have a wide selection of colors, diameter and quantity per roll.

Besides the paper and cardboarded targets EEMANN TECH has a selection of Self setting metal plate targets. The Self setting targets are made of HARDOX steel and are intended for competition and shooting practice with handgun or rifle.

All the products manufactured by EEMANN TECH are labelled and have original packaging.

EEMANN TECH

The Eemann Tech Self Setting Steel Target, HARDOX, 200mm

Reference nr. ET-040012

Taking **Training** to the Next Level

TECHNICAL SPECIFICATIONS

- Plate material: HARDOX 450
- Plate thickness: 12mm
- Plate diameter: 20cm
- Height: 28cm
- Weight Brutto: 9,8 kg
- Weight Netto: 9,2 kg
- Plate-base material: Steel S355

STEEL TARGETS

The Eemann Tech IPSC Self Setting HARDOX Steel Target made of **Hardox steel** for competition and practice shooting using handgun or rifle.

The plate rises by means of special springs that can be easily removed if needed. The speed and rigidity of rising the plate backwards depends on springs power.

To maximize the training effect and have the plate rise back again to the standing position after each shot the plate should be used as it was designed with springs set mounted. To satisfy shooters with different firearm power factor the Self Setting plate set contains different power springs to provide the option for customization, to meet your needs and expectations. Using the Eemann Tech Self Setting Steel Target will take training to the next level!

To use the plate for practical shooting competitions the springs can be easily removed and the plate will work as a normal falling plate.

The Self Setting plate has a heavy base made of steel that keeps the plate in place whilst shooting. To fix the plate in place reliably the special holes are perforated on the horizontal parts of the plate base. Using the securing holes, the plate can be either fixed on the ground in the vertical position or secured to some stable construction downwards.

SET CONTAINS

- Eemann Tech IPSC Self Setting HARDOX Steel Target
- 2-springs-set [ET-040010]
- Additional 2-springs-set with reduced power -10% [ET-040011]

TARGET HAS BEEN TESTED BY

- Pistol at 7 meters distance (calibers: 9x19; 7,62x25; .38 SUPER)
- Rifle at 100 meters distance (calibers: .223 REM; 7,62x39; .308 WIN; 7,62x54R)

NEW**EEMANN TECH USPSA DRY FIRING TRAINING KIT****Reference nr.**

ET-222102

NEW

The Eemann Tech Dry Firing Targets kit is specially made for home dry fire training exercises. The targets are laser cut products made of 2 mm thick MDF and have A, C and D zones clearly marked.

Each target has a hole on the top part for attaching purposes onto any soft surfaces by tacs (included). The holes located on the target's sides are meant for rotation imitation. Cut targets represent hard cover targets.

THE TARGETS HAVE 3 SIZES

- Big targets: 15 cm tall that are 26 % of full-size target and imitate medium distance
- Medium targets: 9 cm tall that are 16 % of full-size target and imitate long distance
- Small targets: 6 cm tall that are 10 % of full-size target and imitate very long distance

COLOR

- Targets are of TAN color
- Poppers are of WHITE color

**EEMANN TECH CORN COB POLISHING MEDIA
M16 - 2KG****Reference nr.**

ET-030032

NEW**EEMANN TECH CORN COB POLISHING MEDIA
M16 - 25KG****Reference nr.**

ET-030033

NEW

High quality corn cob media which can remove grit, dirt and powder residue from your cases.

The media can be used repeatedly but should be replaced periodically for the best result. The small grain media is perfect for use in small to medium size tumblers and cleans even the smallest recesses of case rims and primer pockets.

Works great with all polishing additives. Just a few spoons onto the media and then a few hours in your tumbler – and your brass will come out looking like new!
