Exercise 2, p. 383 (continued)

The spreadsheet model for Heavenly Eyes Ltd. is similar to the one you used for BrainWaves Consultants in Section 9.5, Exercise 1. Make sure you complete Exercise 1 before attempting this exercise.

You will notice a slight difference in how the two businesses are organized. BrainWaves Consultants is a sole proprietorship, while Heavenly Eyes Ltd. is a corporation. Most of the cash flow work you will do in future accounting courses will involve corporations.

For this exercise, you do not need to know much about the accounting for corporations beyond the differences shown in the equity section of the statement of financial position. For instance, a corporation is a separate legal entity owned by shareholders. Therefore, the name Shareholders' Equity is used instead of Owner's Equity. The Shareholders' Equity section has two primary accounts: Common Shares and Retained Earnings.

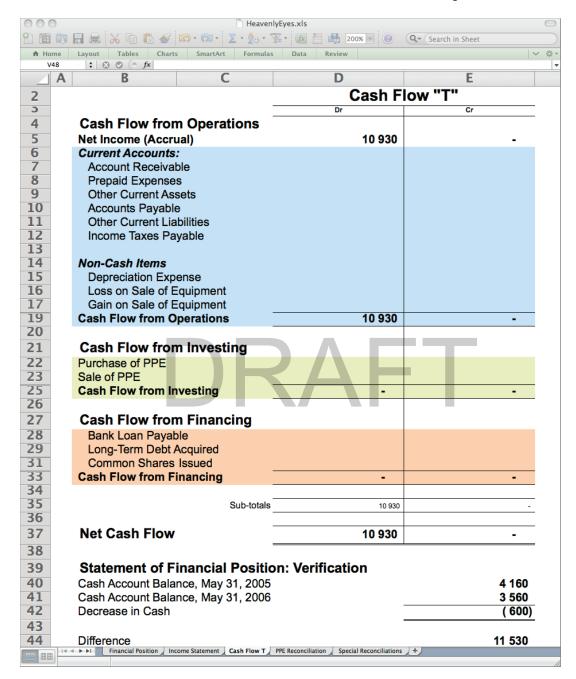

The Common Shares account usually indicates how much money people have paid to the company in order to become shareholders. Selling common shares to people is one way a corporation can raise funds. The Retained Earnings account is similar to the Capital account that you have used to this point in your accounting studies. Like the Capital account, Retained Earnings is increased by net income and reduced by net loss. Also, in the same manner that Capital is reduced by discretionary payments to the owner (Drawings), Retained Earnings is reduced by discretionary payments to the shareholders (Dividends).

- A. Load the spreadsheet model named *HeavenlyEves.xls*. Complete the shaded areas of columns G and H shown in the statement of financial position on the pervious page. The first answer has been done for you, showing a decrease in cash of \$600 and the overall effect of a credit in the Cash account. Make sure you use the same formulas and IF functions that are described on pages 374 to 375 of your textbook.
- B. Select the Income Statement tab. There is nothing for you to enter on this sheet, but be aware of three important numbers you must deal with later. The first two, Depreciation Expense and Loss on Sale of Equipment, are non-cash expenses. No cheques had to be written for the \$30 700 and \$10 000 amounts shown. The other important number is Net Income. You will have to turn the accrual net income of \$10,930 into a cash net income in Part C on the next page.

Name	Date	

Exercise 2, p. 383 (continued)

C. Select the Cash Flow T tab. Your monitor should look like the spreadsheet below.

As you can see at the bottom right of the Cash Flow T, the difference between the accrual net income of \$10 930 and the cash net income of -\$600 is \$11 530. Your task is to pare down the accrual net income so that it appears as a \$600 credit on row 37.

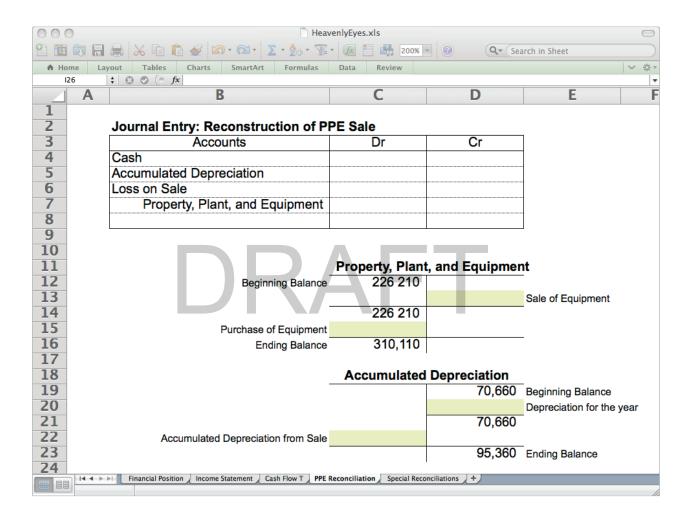

To start, focus your attention solely on cash flow from operations. Create IF functions like the ones described on pages 378 to 380 of your textbook to determine the cash flow from operations on row 19. If your work is accurate to this point, cash flow from operations should be a \$32 833 debit.

Name	Date

Exercise 2, p. 383 (continued)

D. Determining cash flow from investing can be challenging, even though this section primarily involves just two activities: the purchase and sale of property, plant, and equipment. In this year, Heavenly Eyes Ltd sold some old equipment at a loss. The original cost value of the equipment was \$20 000, the same value listed in the Property, Plant, and Equipment account in the company's ledger.

Select the PPE Reconciliation tab. It should look like the spreadsheet below.

The beginning and ending balances in the two T-accounts above are generated by cell references to the Statement of Financial Position. Do your best to fill in the shaded cells in the T-accounts. Then, use your T-account data to reconstruct the journal entry for the sale of the \$20 000 piece of equipment. By reconstructing the sale entry, you will determine how much cash was received when the equipment was sold.

After finishing this spreadsheet, go back to the Cash Flow from the Investing section in the Cash Flow T sheet, and enter the amounts you have determined from your PPE work.

Name	_ Date
------	--------

Exercise 2, p. 383 (continued)

- E. The financing section of the Cash Flow T should be relatively straightforward. Click the Special Reconciliations tab to help you determine the cash flow changes that have been caused by the Bank Loan, Long-Term Debt, and Common Shares accounts. Enter the amounts you determine into the Cash Flow T worksheet.
 - When you have finished the Cash Flow T worksheet, the net cash flow on row 37 should be a \$600 credit, which is the same amount revealed by the comparative statements of financial position.
- F. The statement of financial position and the income statement for Heavenly Eyes Ltd. show some discouraging signs. For claims on the assets, there is close to a 50/50 split between shareholders and creditors. Also, the Net Income of \$10 930 is less than 2% of the Sales figure. From the perspective of a an outside accountant, write a business letter to the shareholders of Heavenly Eyes Ltd. Make sure your letter includes some facts revealed by the cash flow results you produced.
