

Chemistry Day 63

Tuesday, March 12th – Wednesday, March 13th,
2019

Do-Now: “**BrainPOP: Water**”

1. Write down today's FLT
2. *Copy & complete:* The forces that connect the O and the H in different H_2O molecules are called _____ bonds, but they are actually a type of _____ instead of a chemical bond.
3. How do water molecules “stick” together?
4. Distinguish between adhesion and cohesion.
5. You want to add some sugar to your coffee/tea. How do you make sure it dissolves?
6. Take out your planner and ToC.

Homogeneous Aqueous Solutions

Video Notes (4)

Recall

Partial negative charge

Electrons are pulled toward oxygen.

Partial positive charge

Solutes and Solvents

Solvents and Solutes

- **Solution = homogeneous mixture of solvent + solute.**

Solvents and Solutes

- **Solvent** = what you're dissolving *in*
- **Solute** = substance you're dissolving

Solvents and Solutes

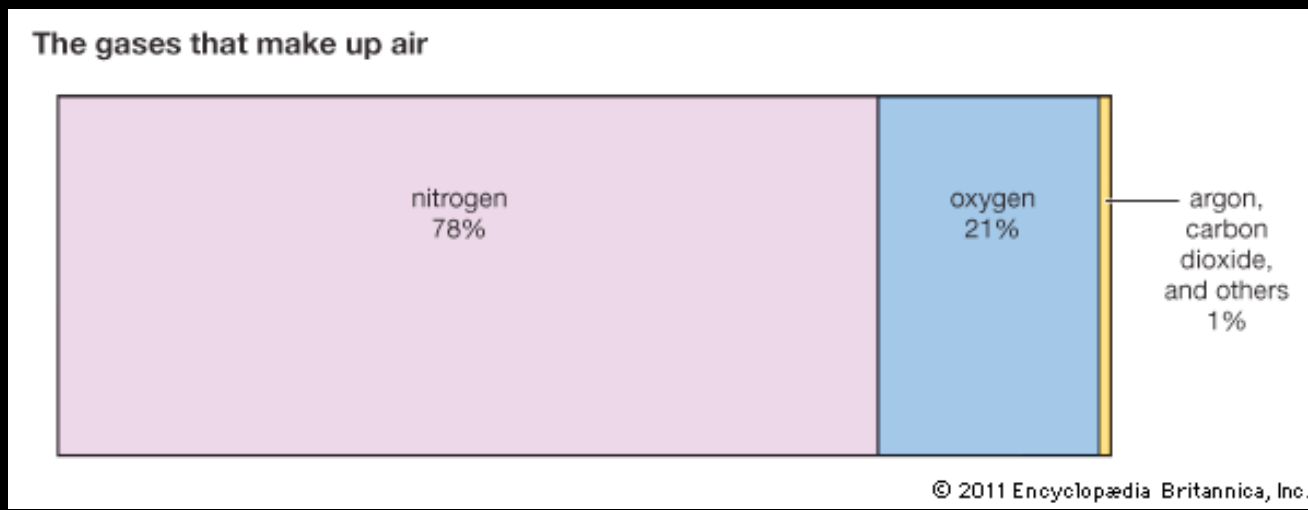

- **Solvent** = what you're dissolving *in*
- **Solute** = substance you're dissolving

Aqueous Solutions

Solvents and Solutes

- **Aqueous Solutions = Homogeneous mixtures containing water**
- Keep in mind that solutions do not have to contain water, but this is the type we are studying in this chapter
- Ex/ Air is also a solution

Concentrated vs. Dilute

Lots of solute, but
little solvent

Lots of solvent, but
little solute

● Solute particle
● Solvent particle

Concentrated solution

Dilute solution

Aqueous Solutions

- What can water dissolve?
- **Like dissolves like = Water dissolves charged (ionic) and polar substances**
- Salt is ionic
- Oil is nonpolar

How ionic solids dissolve in water

These ions have been pulled away from the main crystal structure by water's polarity.

Let's diagram **hydration** of NaCl:

Electrolytes and Nonelectrolytes

Electrolytes and Nonelectrolytes

- **Electrolytes = Dissolve into ions & conduct electricity in aq. soln.**

Electrolytes and Nonelectrolytes

- All ionic compounds are electrolytes because they dissociate into ions (they are also called “salts”)

Electrolytes and Nonelectrolytes

- **Nonelectrolytes = Do not conduct electricity in aq. soln.**
- Most are molecular/covalent (no ions)

Electrolytes and Nonelectrolytes

- Not all electrolytes conduct to the same degree
- There are weak electrolytes, and strong electrolytes
- Depends on: the degree of ionization
- Weak electrolytes only partially ionize.

Electrolytes vs. Nonelectrolytes

The ammeter measures the flow of electrons (current) through the circuit.

- ✓ If the ammeter measures a current and the bulb glows, then the solution conducts.
- ✓ If the ammeter fails to measure a current and the bulb does not glow, the solution is non-conducting.

Electrolytes and Nonelectrolytes

- **Strong electrolytes = ionize completely in soln' (ex/ salts, strong acids)**
- **Weak electrolytes = only partially ionize**
- Weak electrolytes have only a fraction of the solute that exists as ions

Strong Electrolytes are 100% ionized

salts

H_2O

100% ions

H_2O

acids

H_2O

Bases

H_2O

Water of Hydration

Hydrates

- Some compounds absorb water molecules and incorporate them into their chemical structures
- **Hydrate = substance that contains water**
 - Ex/

Water of Hydration (or Water of Crystallization)

- Water molecules are chemically bonded to solid salt molecules (not in solution)
- These compounds have fixed amounts of water.
- The water can be driven off by heating:

- Called **copper(II)sulfate pentahydrate**.

Hydrates

- Could you find the molar mass of a hydrate?

Dihydrate salt

Pair-Share-Respond

1. What is a solution?
2. We did a lab where we created soda. In that lab, what was the solute, and what was the solvent?
3. You dissolve calcium fluoride in water. How will the water molecules hydrate the ions?
4. Distinguish between a weak and a strong electrolyte.
5. Define “hydrate”.

Chemistry Day 64

Thursday, March 14th – Friday, March 15th,
2019

Do-Now: “**Popcorn Lab Do-Now**”

1. Write down today's FLT
 2. Identify the solute and solvent in a cup of coffee.
 3. Molar mass allows me to convert from _____ to _____
 4. How many grams of oxygen are present in 2.41 moles? Show all work.
 5. We will be using bunsen burners today.
Remind me: how do we use them safely?
- Take out your planner, ToC, and a calculator*
