

CLASS VI - MATHEMATICS

WHOLE NUMBERS

VRINDA S,PGT CS, KV PORT TRUST

NATURAL NUMBERS

Natural Numbers

- Numbers on right are greater
- Numbers on left are smaller

NATURAL VS WHOLE NUMBERS

Difference Between Whole Numbers & Natural Numbers

Whole Numbers

Natural Numbers

Whole Numbers: {0, 1, 2, 3, 4, 5, 6,.....}

Natural Numbers: {1, 2, 3, 4, 5, 6,.....}

Counting starts from 0

Counting starts from 1

All whole numbers are not natural numbers

All Natural numbers are whole numbers

What are natural numbers?

- Counting numbers are known as natural numbers.

What are whole numbers?

- $0 + \text{natural number} = \text{whole number}$.

Predecessor and successor?

- Number comes before \rightarrow Predecessor
- Number comes after \rightarrow Successor

PREDECESSOR

Natural Numbers

PREDECESSOR OF

1. $5 = 4$

2. $8 = 7$

3. $3 = 2$

© TechTerms.com

SUCCESSOR

Natural Numbers

SUCCESSOR OF

1. $6 = 7$

2. $4 = 5$

3. $1 = 2$

© TechTerms.com

PRACTICE

- Write the successor of :

(a) 2440701 (b) 100199

$$2440701+1=2440702$$

$$100199+1=100200$$

- Write the predecessor of :

(a) 10000 (b) 208090

$$10000-1=9999$$

$$208090-1=208089$$

- **Write the next three natural numbers after 10999**

Next=after=successor → add 1

$$10999+1=11000$$

$$11000+1=11001$$

$$11001+1=11002$$

Answer: 11000,11001,11002

- **Write the three natural numbers occurring just before 10001**

Before=Predecessor → subtract 1

$$10001-1=10000$$

$$10000-1=9999$$

$$9999-1=9998$$

Answer:10000,9999,9998

- In each of the following pairs of numbers, state which whole number is on the left of the other number on the number line. Also write them with the appropriate sign ($>$, $<$) between them.

a) 530, 503

503 is left of 530

$530 > 503$

b) 98765, 56789

56789 is left of 98765

$98765 > 56789$

NUMBER LINE

Addition on number line

$6 + 5 = 11$	 A number line from 0 to 20 with tick marks every 1 unit. A red arrow starts at 6 and points to 11, representing adding 5. A green arrow starts at 11 and points to 16, representing adding 5 more.
$9 + 4 =$	 A number line from 0 to 20 with tick marks every 1 unit.
$11 + 5 =$	 A number line from 0 to 20 with tick marks every 1 unit.
$8 + 3 =$	 A number line from 0 to 20 with tick marks every 1 unit.
$2 + 12 =$	 A number line from 0 to 20 with tick marks every 1 unit.
$10 + 7 =$	 A number line from 0 to 20 with tick marks every 1 unit.

PROPERTIES OF WHOLE NUMBERS

- **What are the properties of whole numbers?**

The properties of whole numbers are:

1. Whole numbers are closed under addition and multiplication
2. Addition and multiplication of whole numbers is commutative
3. Addition and multiplication of whole numbers is associative
4. It obeys the distributive property of multiplication over addition
5. Additive identity of whole numbers is 0
6. Multiplicative identity of whole numbers is 1

Closure Property

- If a and b are two whole numbers then $a \times b$ or $a + b$ is also a whole number.

$$2 \times 3 = 6$$

$$20 \times 30 = 600$$

$$2 + 3 = 5$$

$$20 + 30 = 50$$

Commutative Property of Addition and Multiplication

- If a and b are any two whole numbers then,

$$a+b=b+a$$

$$2+3=5$$

$$3+2=5$$

$$a \times b = b \times a$$

$$2 \times 3 = 6$$

$$3 \times 2 = 6$$

Additive identity

- When a whole number is added to 0, its value remains unchanged, i.e., if x is a whole number then $x+0=0+x=x$

$$2+0=2$$

$$30+0=30$$

Multiplicative identity

- When a whole number is multiplied by 1, its value remains unchanged, i.e., if x is a whole number then $x \cdot 1 = x = 1 \cdot x$

$$2 \times 1 = 2$$

$$450 \times 1 = 450$$

$$0 \times 1 = 0$$

Associative Property

- If a, b and c are any whole numbers then

$$a+(b+c)=(a+b)+c \text{ and } ax(bxc)=(axb)xc$$

$$2+(3+5)=10$$

$$3+5=8$$

$$2+8=10$$

$$(2+3)+5=10$$

$$2+3=5$$

$$5+5=10$$

$$2x(3x5)=30$$

$$3x5=15$$

$$2x15=30$$

$$(2x3)x5=30$$

$$2x3=6$$

$$6x5=30$$

Distributive Property

The distributive property of multiplication over addition is

$$ax(b+c)=(axb)+(axc)$$

The distributive property of multiplication over subtraction is

$$ax(b-c)=(axb)-(axc)$$

$$5x(100+2)$$

$$=5x100+5x2$$

$$=500+10=510$$

$$5x(100-2)$$

$$=5x100-5x2$$

$$=500-10=490$$

- **Multiplication by zero**

- When a whole number is multiplied to 0, the result is always 0, i.e., $x \cdot 0 = 0 \cdot x = 0$

- **Division by zero**

- Division of a whole number by 0 is not defined, i.e., if x is a whole number then $x/0$ is not defined.
