How to Enter Measurements

Understanding Price List Items

Price list items in this document list the category, selector, description, unit, and default variable if applicable.

| Category | Selector | Description | Unit | Variable |
|----------|----------|--|------|----------|
| DRY | 1/2 | 1/2" drywall - hung, taped, floated, ready for paint | SF | WC |

Category: The code that groups items together. For example, "Dry" is the category for all drywall items.

Selector: With the category, the selector identifies the item. You can use this to search for the item in the price list. The complete code in this example is DRY1/2.

Description: provides brief details about the item.

Unit: The unit of measurement for how the item is priced. See more information below.

Variable: Default Variable used by the computer to calculate an item's quantity within a room. See more information below.

This document does not contain the complete list of price list items nor all the information about each item. You can find a complete list of items in Xactimate and other Xactware products.

View price list items in Xactimate

There are many different ways to view price list items in Xactimate. This is only one possible method.

1. Open Xactimate.
2. Click the **Price List** tab.
3. Double click a price list.
 - For the most recent price list, click **Request Price List(s)** and follow the steps in the dialog box.
4. Select **All Items List**.
 - To see the items by category, click **Items** on the menu and select your desired category.
5. Double click an item to see detailed information.

Units

A unit is the standard way of calculating the material and labor for a price list item. You may change the unit in the software; the cost of the item will change accordingly. For example, roofing shingles are typically calculated by the square, but they are sold by the bundle. You can change the unit in Xactimate from SQ (square) to BN (bundle) to see how much it would cost to install a bundle of shingles instead of a square of shingles.

| | |
|-----------|------------|
| 5G | 5 Gallon |
| BF | Board Foot |
| BG | Bag |
| BN | Bundle |
| BX | Box |
| CF | Cubic Foot |

| MN | Minimum Charge |
| MO | Month |
| MS | 1000 Sq. Feet |
| PL | Pleat |

| | |
|-----------|-------------|
| PT | Pint |
| QT | Quart |
| RL | Roll |
| RM | Room |
| SF | Square Foot |
| SH | Sheet |

| | |
|-----------|-------------|
| SQ | Square |
| SY | Square Yard |
| TB | Tube |
| TN | Ton |
| UN | Unit |
| WK | Week |

Variables

With Variables, you can quickly calculate the size and area of any part of a room. Instead of having to enter measurements repeatedly, you can sketch a room, and then use the sketch to calculate different items.

The description of a price-list item can be changed automatically to describe the surface area included in the item. This is done by inserting the symbol **{V}** in the description of a price-list item. The symbol will later be replaced by a phrase such as “the walls and ceiling,” “the ceiling,” “the floor,” etc., depending on the variable used in the calculation field. For example, if the item is **PNT SP** and the variable is **WC**, the description will read “Seal then paint the walls and ceiling (2 coats).” Alternately, if the variable **C** is used on the item, the description will read “Seal then paint the ceiling (2 coats).”

You may also calculate fractions of multiples of the variables by adding the fraction (or decimal) or multiple value before the variable. For example, you may use $1/2WC$ or $.5WC$ to restrict the quantity to one half the walls and ceiling, and the variable $2WC$ designates twice the area of the walls and ceilings.

| | |
|------------------|---|
| BF: | Convert To Board Feet |
| C | Square Feet Of Ceiling |
| CF | Cubic Feet |
| CFB | Cubic Feet Var B |
| CY | Cubic Yards |
| CYB | Cubic Yard Var B |
| DK: | Board Feet In A Deck |
| EPW | Exterior Perimeter Of Wall |
| EQUIPMENT | Equipment |
| EW | Exterior Surface Area Of Wall |
| F | Square Feet Of Floor |
| FLF | Length Of Floor |
| FTG: | Cubic Yards Of Concrete In A Footing |
| FW: | Cubic Yards Of Concrete In A Foundation Wall |
| GRFW: | Squares In A Gable Roof - User Defined Waste |
| HFR: | Board Feet In A Hand Framed Roof Without A Tie-In |
| HH | Room Height |
| HIP | Hip Rafter |
| IW | Interior Wall |
| JSTBF: | Board Feet In A Joist System |
| JSTLF: | Linear Feet In A Joist System |
| LABOR | Labor |
| LF | Linear Feet |
| LFA | Linear Feet Var A |
| LFB | Linear Feet Var B |
| LL | Room Length |

| | |
|-----------------|--|
| LW | Square Feet Of Long Wall |
| MATERIAL | Material |
| OVERHEAD | Overhead |
| P | Perimeter Of Room |
| PC | Perimeter Of Ceiling |
| PF | Perimeter Of Floor |
| PROFIT | Profit |
| R | Ridge |
| RC | Riser Count |
| SF | Square Feet |
| SFA | Square Feet Var A |
| SFB | Square Feet Var B |
| SH | Short Height |
| SL: | Cubic Yards Of Concrete In A Slab |
| SQ | Squares |
| STB: | Board Feet In A Load Bearing Stud Wall |
| STN: | Board Feet In A Non-Bearing Stud Wall |
| STP: | Cubic Yards Of Concrete In A Step |
| SW | Square Feet Of Short Wall |
| SY | Square Yards Of Floor |
| SYA | Square Yard Var A |
| SYB | Square Yard Var B |
| TC | Tread Count |
| TOTAL | Total |
| TR: | Linear Feet Of Truss |
| TSF | SF Under Truss System |
| W | Square Feet Of Walls |
| WC | Walls And Ceiling |
| WW | Room Width |

The standard variables listed above always include the entire room, no matter what the shape. To designate a sub-variable, a variable which applies only to a specific subroom, follow the variable with the subroom number. For example, if the closet is subroom number one, the variable for all walls and ceilings in the closet is WC1. Equations like 1/2WC, meaning one half the walls and ceilings, are also allowed.

Activity Codes

The activity code shows what action needs to be taken for the item. For example, removing and replacing (&) DRY1/2 includes the cost of removing and disposing of damaged drywall and replacing it with a product of comparable quality. Like features of price list items, you can change the activity to better suit the situation. Since this feature is easily changed, the list of common price list items below does not include the activity code.

| | |
|--------------|--------------------|
| & | Remove and Replace |
| - | Remove |
| + | Replace |
| F | Repair |
| I | Install Only |
| M | Material Only |
| R | Detach & Reset |

Most commonly used price list items by category

This is a list of the most commonly used price list items by category. This is not a complete list. This list is likely to change. For a complete list of price list items, review the price list in Xactimate or another Xactware product.

Room Dimensioning

It's simple to produce precise dimensions for other room shapes with the Room Dimensioning formulas included in Xactimate. These include interior-use formulas for circular, triangular, trapezoidal, and intersecting-cube rooms; and for rooms with peaked, sloped, and clerestory ceilings and bay windows. Other exterior-use formulas can be used for calculating elevation and gable roof-and-box measurements. You can create other formulas as needed. (See more about creating formulas by clicking **Help** in Xactimate.)

To add dimensions to a room without a sketch:

1. In the Estimate Items tab, right-click on the room you want to change.
2. Select **Dimension**.
3. Click **Add**.
4. Select a room shape. Box is the default.
5. Enter the room dimensions.
6. Click **OK**.

In Xactimate, you can enter measurements for room dimensioning information in three ways: using a comma to separate feet and inches, tick marks (' and ") to identify feet and inches, and feet and inches in decimal format. For example, 3,6 and 3' 6" and 3.5 are valid representations of three feet six inches.

The Room Dimensioning tool uses the variables entered in the Line Item Entry screen. If no variables are selected, it will use the default variable for that line item.

Formulas

Generally, the quantity of an item is calculated automatically when you enter a standard variable for the room. Some items, such as concrete, lumber, and roofing materials, require more data than standard variables provide. For such items, Xactimate provides a variety of special calculation formulas to determine the quantity of the item within the room.

To use some calculation formulas, you must first determine special measurements, such as the depth of a footing for a concrete column, or the width of a joist. The formula asks you for this information and delivers the total yards of concrete, or squares of roofing material.

Other special formulas add waste, or convert existing dimensions into a proper format for ordering. For example, you may know the quantity of boards needed for an area, and need to convert that number into board feet; or you may need to convert square feet of wall space into number of rolls of wallpaper. The CONVERT formula does the mathematics for you.

To add a formula:

1. In the item Quick Entry, click the calculator  next to Calc.

2. Click **Formulas**.
3. Select the formula you want to use.
4. Click **OK**.
5. Enter the formula details.
6. Click **OK**.

Formula Operators

Xactimate formulas use these standard mathematical operations:

| Symbol | Character | Usage | Operation |
|--------|---------------|--------|---|
| + | plus | A+B | Addition |
| - | minus | A-B | Subtraction |
| / | forward slash | A/B | Division |
| * | star | A*B | Multiplication |
| ^ | caret | A^B | Raise A to the power of B |
| () | parentheses | (A+B) | Open/close parentheses may enclose values, variables, or equations. |
| ABS | | ABS(A) | Absolute value of A |
| INT | | INT(A) | Greatest integer of A (must be a positive number) |
| PI | | PI(A) | 3.14159265359 * value of A |
| RND | | RND(A) | Round value in A to the nearest whole number |
| RUP | | RUP(A) | Round value in A up to the next whole number |
| SQR | | SQR(A) | Square root of the value in A |

How to Enter Measurements

Unlike Room Dimensioning formulas, calculation formulas require that you enter measurements in a specific format. When necessary, the explanatory text below the formula details indicates the format you should use.

If the question requires the measurement to be entered in inches, type the number of inches only. Do not use special symbols like quotation (") marks in your answer. For example, you would enter four inches (4") by typing a 4 and then pressing **Enter**.

If the question requires you to enter the measurement in feet (comma) inches, type the number of feet, then a comma, and then the number of inches. Do not use special symbols like quotation (") marks or apostrophes (') in your answer. For example, you would enter six feet four inches (6'4") by typing 6,4 and then pressing **Enter**.
