Computational Physics, 3rd Ed Problem Solving with Python

Rubin H Landau, Manuel J Paez & Cristian Bordeianu

© Wiley-VCH Verlag GmbH & Co.,
2015 ([buy here](#))

Multifaceted Video Lecture
Package

Expanded version of *Computational Physics*, 2nd Edition (Java Based), WILEY-VCH GmbH, 2007.

Contents

1	Introduction	<i>1</i>
1.1	Computational Physics & Computational Science	<i>1</i>
1.2	This Book's Subjects	<i>3</i>
1.3	This Book's Problems	<i>4</i>
1.4	This Book's Language: The Python Ecosystem	<i>8</i>
1.4.1	Python Packages (Libraries)	<i>9</i>
1.4.2	This Book's Packages	<i>9</i>
1.4.3	The Easy Way: Python Distributions	<i>11</i>
1.5	Python's Visualization Tools	<i>12</i>
1.5.1	Visual (VPython)'s 2-D Plots	<i>14</i>
1.5.2	Vpython's Animations	<i>16</i>
1.5.3	Matplotlib's 2-D Plots	<i>17</i>
1.5.4	Matplotlib's 3-D Surface Plots	<i>21</i>
1.5.5	Matplotlib's Animations	<i>24</i>
1.5.6	Mayavi's Visualizations Beyond Plotting*	<i>26</i>
1.6	Plotting Exercises	<i>29</i>
1.7	Python's Algebraic Tools	<i>30</i>
2	Computing Software Basics	<i>33</i>
2.1	Making Computers Obey	<i>33</i>
2.2	Programming Warmup	<i>35</i>
2.2.1	Structured & Reproducible Program Design	<i>36</i>
2.2.2	Shells, Editors and Execution	<i>38</i>
2.3	Python I/O	<i>39</i>
2.4	Computer Number Representations (Theory)	<i>40</i>
2.4.1	IEEE Floating-Point Numbers	<i>41</i>
2.4.2	Python and the IEEE 754 Standard	<i>47</i>
2.4.3	Over & Underflow Exercises	<i>48</i>
2.4.4	Machine Precision (Model)	<i>49</i>
2.4.5	Experiment: Your Machine's Precision	<i>50</i>
2.5	Problem: Summing Series	<i>50</i>
2.5.1	Numerical Summation (Method)	<i>51</i>
2.5.2	Implementation and Assessment	<i>52</i>

3	Errors & Uncertainties in Computations	53
3.1	Types of Errors (Theory)	53
3.1.1	Model for Disaster: Subtractive Cancellation	55
3.1.2	Subtractive Cancellation Exercises	56
3.1.3	Round-off Errors	57
3.1.4	Round-off Error Accumulation	58
3.2	Error in Bessel Functions (Problem)	59
3.2.1	Numerical Recursion (Method)	60
3.2.2	Recursion Relations Assessment	61
3.3	Experimental Error Investigation	62
3.3.1	Error Assessment	65
4	Monte Carlo: Randomness, Walks & Decays	69
4.1	Deterministic Randomness	69
4.2	Random Sequences (Theory)	69
4.2.1	Random-Number Generation (Algorithm)	70
4.2.2	Implementation: Random Sequences	72
4.2.3	Assessing Randomness and Uniformity	73
4.3	Random Walks (Problem)	75
4.3.1	Random-Walk Simulation	76
4.3.2	Implementation: Random Walk	77
4.4	Extension: Protein Folding & Self-Avoiding Random Walks	79
4.5	Spontaneous Decay (Problem)	80
4.5.1	Discrete Decay (Model)	81
4.5.2	Continuous Decay (Model)	82
4.5.3	Decay Simulation	82
4.6	Decay Implementation and Visualization	84
5	Differentiation & Integration	85
5.1	Differentiation	85
5.2	Forward Difference (Algorithm)	86
5.3	Central Difference (Algorithm)	87
5.4	Extrapolated Difference (Algorithm)	87
5.5	Error Assessment	88
5.6	Second Derivatives (Problem)	89
5.6.1	Second-Derivative Assessment	90
5.7	Integration	90
5.8	Quadrature as Box Counting (Math)	91
5.9	Algorithm: Trapezoid Rule	93
5.10	Algorithm: Simpson's Rule	94
5.11	Integration Error (Assessment)	95
5.12	Algorithm: Gaussian Quadrature	97
5.12.1	Mapping Integration Points	98
5.12.2	Gaussian Points Derivation	99
5.12.3	Integration Error Assessment	100

- 5.13 Higher-Order Rules (Algorithm) 103
- 5.14 **Monte Carlo Integration by Stone Throwing** 103
 - 5.14.1 Stone Throwing Implementation 104
- 5.15 **Mean Value Integration (Theory & Math)** 104
- 5.16 Integration Exercises 106
- 5.17 Multidimensional Monte Carlo Integration (Problem) 108
 - 5.17.1 Multi Dimension Integration Error Assessment 109
 - 5.17.2 Implementation: 10-D Monte Carlo Integration 109
- 5.18 Integrating Rapidly Varying Functions (Problem) 110
- 5.19 Variance Reduction (Method) 110
- 5.20 Importance Sampling (Method) 110
- 5.21 **Von Neumann Rejection (Method)** 111
 - 5.21.1 Simple Random Gaussian Distribution 113
- 5.22 Nonuniform Assessment \odot 113
 - 5.22.1 Implementation 113

- 6 Matrix Computing** 117
 - 6.1 Problem 3: N-D Newton-Raphson; Two Masses on a String 117
 - 6.1.1 Theory: Statics 118
 - 6.1.2 Algorithm: Multidimensional Searching 119
 - 6.2 Why Matrix Computing? 122
 - 6.3 Classes of Matrix Problems (Maths) 122
 - 6.3.1 Practical Matrix Computing 124
 - 6.4 Python Lists as Arrays 126
 - 6.5 Numerical Python (NumPy) Arrays 127
 - 6.5.1 NumPy's linalg Package 131
 - 6.6 Exercise: Testing Matrix Programs 134
 - 6.6.1 Matrix Solution of the String Problem 137
 - 6.6.2 Explorations 138

- 7 Trial-and-Error Searching & Data Fitting** 141
 - 7.1 Problem 1: A Search for Quantum States in a Box 141
 - 7.2 Algorithm: Trial-and-Error Roots via Bisection 143
 - 7.2.1 Implementation: Bisection Algorithm 144
 - 7.3 Improved Algorithm: Newton-Raphson Searching 145
 - 7.3.1 Newton-Raphson with Backtracking 147
 - 7.3.2 Implementation: Newton-Raphson Algorithm 148
 - 7.4 Problem 2: Temperature Dependence of Magnetization 148
 - 7.4.1 Searching Exercise 150
 - 7.5 **Problem 3: Fitting An Experimental Spectrum** 150
 - 7.5.1 Lagrange Implementation, Assessment 153
 - 7.5.2 Cubic Spline Interpolation 154
 - 7.6 Problem 4: Fitting Exponential Decay 156
 - 7.7 Least-Squares Fitting (Theory) 158
 - 7.7.1 Theory and Implementation 160

7.8	Exercises: Fitting Exponential Decay, Heat Flow & Hubble's Law	162
7.8.1	Linear Quadratic Fit	165
7.8.2	Problem 5: Nonlinear Fit to a Breit-Wigner	167
8	Solving Differential Equations; Nonlinear Oscillations	171
8.1	Free Nonlinear Oscillations	171
8.2	Nonlinear Oscillators (Models)	172
8.3	Types of Differential Equations (Math)	173
8.4	Dynamic Form for ODE's (Theory)	175
8.5	ODE Algorithms	177
8.5.1	Euler's Rule	178
8.6	Runge-Kutta Rule	178
8.7	ABM Predictor-Corrector Rule	183
8.7.1	Assessment: rk2 versus rk4 versus rk45	185
8.8	Solution for Nonlinear Oscillations (Assessment)	187
8.8.1	Precision Assessment: Energy Conservation	188
8.9	Extensions: Nonlinear Resonances, Beats, Friction	189
8.9.1	Friction (Model)	189
8.9.2	Resonances & Beats: Model, Implementation	189
8.10	Extension: Time-Dependent Forces	190
9	ODE Applications	193
9.1	Problem: Quantum Eigenvalues in Arbitrary Potential	193
9.1.1	Model: Nucleon in a Box	194
9.2	Algorithm: Eigenvalues via ODE Solver + Search	195
9.2.1	Numerov Algorithm for Schrödinger ODE \odot	197
9.2.2	Implementation	200
9.3	Explorations	203
9.4	Problem: Classical Chaotic Scattering	204
9.4.1	Model and Theory	204
9.4.2	Implementation	206
9.4.3	Assessment	208
9.5	Problem: Balls Falling Out of the Sky	209
9.6	Theory: Projectile Motion with Drag	209
9.6.1	Simultaneous Second-Order ODE's	210
9.6.2	Assessment	211
9.7	Exercises: 2- & 3-Body Planet Orbits & Chaotic Weather	211
10	High-Performance Hardware & Parallel Computers	215
10.1	High-Performance Computers	215
10.2	Memory Hierarchy	216
10.3	The Central Processing Unit	219
10.4	CPU Design: Reduced Instruction Set Processors	220
10.5	CPU Design: Multiple-Core Processors	221
10.6	CPU Design: Vector Processors	222

10.7	Introduction to Parallel Computing	223
10.8	Parallel Semantics (Theory)	223
10.9	Distributed Memory Programming	226
10.10	Parallel Performance	227
10.10.1	Communication Overhead	229
10.11	Parallelization Strategies	230
10.12	Practical Aspects of MIMD Message Passing	231
10.12.1	High-Level View of Message Passing	232
10.12.2	Message Passing Example & Exercise	234
10.13	Scalability	236
10.13.1	Scalability Exercises	238
10.14	Data Parallelism and Domain Decomposition	239
10.14.1	Domain Decomposition Exercises	242
10.15	The IBM Blue Gene Supercomputers	244
10.16	Exascale Computing via Multinode-Multicore-GPU's	245
11	Applied HPC: Optimization, Tuning & GPU Programming	247
11.1	General Program Optimization	247
11.1.1	Programming for Virtual Memory	248
11.1.2	Optimization Exercises	248
11.2	Optimized Matrix Programming with NumPy	251
11.2.1	NumPy Optimization Exercises	253
11.3	Empirical Performance of Hardware	253
11.3.1	Racing Python <i>versus</i> Fortran/C	255
11.4	Programming for the Data Cache (Method)	262
11.4.1	Exercise 1: Cache Misses	262
11.4.2	Exercise 2: Cache Flow	263
11.4.3	Exercise 3: Large-Matrix Multiplication	264
11.5	Graphical Processing Units for High Performance Computing	265
11.5.1	The GPU Card	266
11.6	Practical Tips for Multicore & GPU Programming	267
11.6.1	CUDA Memory Usage	268
11.6.2	CUDA Programming	270
12	Fourier Analysis: Signals & Filters	275
12.1	Fourier Analysis of Nonlinear Oscillations	275
12.2	Fourier Series (Math)	276
12.2.1	Examples: Sawtooth & Half-Wave Functions	278
12.3	Exercise: Summation of Fourier Series	279
12.4	Fourier Transforms (Theory)	279
12.5	The Discrete Fourier Transform	281
12.5.1	Aliasing (Assessment)	285
12.5.2	Fourier Series DFT (Example)	287
12.5.3	Assessments	288
12.5.4	Nonperiodic Function DFT (Exploration)	290

- 12.6 Filtering Noisy Signals 290
- 12.7 Noise Reduction via Autocorrelation (Theory) 290
 - 12.7.1 Exercises 293
- 12.8 Filtering with Transforms (Theory) 294
 - 12.8.1 Digital Filters: Windowed Sinc Filters⊙ 296
- 12.9 **The Fast Fourier Transform Algorithm (FFT)** ⊙ 298
 - 12.9.1 Bit Reversal 301
- 12.10 FFT Implementation 303
- 12.11 FFT Assessment 304

- 13 Wavelet & Principal Components Analyses: Nonstationary Signals & Data Compression** 307
 - 13.1 Problem: Spectral Analysis of Nonstationary Signals 307
 - 13.2 **Wavelet Basics** 308
 - 13.3 Wave Packets and Uncertainty Principle (Theory) 309
 - 13.3.1 Wave Packet Assessment 311
 - 13.4 Short-Time Fourier Transforms (Math) 311
 - 13.5 The Wavelet Transform 313
 - 13.5.1 Wavelet Basis Functions 313
 - 13.5.2 Continuous Wavelet Transform 317
 - 13.6 **Discrete Wavelet Transforms, Multi Resolution Analysis**⊙ 318
 - 13.6.1 Pyramid Scheme Implementation ⊙ 323
 - 13.6.2 Daubechies Wavelets via Filtering 327
 - 13.6.3 DWT Implementation and Exercise 330
 - 13.7 Principal Components Analysis 333
 - 13.7.1 Demonstration of Principal Component Analysis 334
 - 13.7.2 PCA Exercises 337

- 14 Nonlinear Population Dynamics** 339
 - 14.1 Bug Population Dynamics 339
 - 14.2 The Logistic Map (Model) 339
 - 14.3 Properties of Nonlinear Maps (Theory & Exercise) 342
 - 14.3.1 Fixed Points 342
 - 14.3.2 Period Doubling, Attractors 343
 - 14.4 Mapping Implementation 344
 - 14.5 Bifurcation Diagram 345
 - 14.5.1 Implementation 346
 - 14.5.2 Visualization Algorithm: Binning 346
 - 14.5.3 Feigenbaum Constants (Exploration) 348
 - 14.6 Logistic Map Random Numbers (Exploration) 348
 - 14.7 Other Maps (Exploration) 349
 - 14.8 **Signals of Chaos: Lyapunov Coefficients & Shannon Entropy**⊙ 349
 - 14.9 Coupled Predator-Prey Models 354
 - 14.10 Lotka-Volterra Model 354
 - 14.10.1 Lotka-Volterra Assessment 357

14.11	Predator-Prey Chaos	357
14.11.1	Exercises	359
14.11.2	LVM with Prey Limit	359
14.11.3	LVM with Predation Efficiency	360
14.11.4	LVM Implementation and Assessment	361
14.11.5	Two Predators, One Prey (Exploration)	362
15	Continuous Nonlinear Dynamics	363
15.1	Chaotic Pendulum	363
15.1.1	Free Pendulum Oscillations	364
15.1.2	Solution as Elliptic Integrals	365
15.1.3	Implementation and Test: Free Pendulum	365
15.2	Visualization: Phase Space Orbits	366
15.2.1	Chaos in Phase Space	368
15.2.2	Assessment in Phase Space	371
15.3	Exploration: Bifurcations of Chaotic Pendulums	373
15.4	Alternate Problem: The Double Pendulum	376
15.5	Assessment: Fourier/Wavelet Analysis of Chaos	378
15.6	Exploration: Alternate Phase Space Plots	378
15.7	Further Explorations	379
16	Fractals & Statistical Growth Models	383
16.1	Fractional Dimension (Math)	383
16.2	The Sierpiński Gasket (Problem 1)	384
16.2.1	Sierpiński Implementation	385
16.2.2	Assessing Fractal Dimension	385
16.3	Growing Plants (Problem 2)	386
16.3.1	Self-Affine Connection (Theory)	386
16.3.2	Barnsley's Fern Implementation	388
16.3.3	Self-Affinity in Trees Implementation	389
16.4	Ballistic Deposition (Problem 3)	390
16.4.1	Random Deposition Algorithm	390
16.5	Length of British Coastline (Problem 4)	391
16.5.1	Coastlines as Fractals (Model)	392
16.5.2	Box Counting Algorithm	393
16.5.3	Coastline Implementation and Exercise	393
16.6	Correlated Growth, Forests, Films (Problem 5)	395
16.6.1	Correlated Ballistic Deposition Algorithm	395
16.7	Globular Cluster (Problem 6)	396
16.7.1	Diffusion-Limited Aggregation Algorithm	397
16.7.2	Fractal Assessment of DLA or a Pollock	399
16.8	Fractals in Bifurcation Plot (Problem 7)	400
16.9	Fractals from Cellular Automata	401
16.10	Perlin Noise Adds Realism \odot	403
16.10.1	Ray Tracing Algorithms	404

14.11	Predator-Prey Chaos	357
14.11.1	Exercises	359
14.11.2	LVM with Prey Limit	359
14.11.3	LVM with Predation Efficiency	360
14.11.4	LVM Implementation and Assessment	361
14.11.5	Two Predators, One Prey (Exploration)	362
15	Continuous Nonlinear Dynamics	363
15.1	Chaotic Pendulum	363
15.1.1	Free Pendulum Oscillations	364
15.1.2	Solution as Elliptic Integrals	365
15.1.3	Implementation and Test: Free Pendulum	365
15.2	Visualization: Phase Space Orbits	366
15.2.1	Chaos in Phase Space	368
15.2.2	Assessment in Phase Space	371
15.3	Exploration: Bifurcations of Chaotic Pendulums	373
15.4	Alternate Problem: The Double Pendulum	376
15.5	Assessment: Fourier/Wavelet Analysis of Chaos	378
15.6	Exploration: Alternate Phase Space Plots	378
15.7	Further Explorations	379
16	Fractals & Statistical Growth Models	383
16.1	Fractional Dimension (Math)	383
16.2	The Sierpiński Gasket (Problem 1)	384
16.2.1	Sierpiński Implementation	385
16.2.2	Assessing Fractal Dimension	385
16.3	Growing Plants (Problem 2)	386
16.3.1	Self-Affine Connection (Theory)	386
16.3.2	Barnsley's Fern Implementation	388
16.3.3	Self-Affinity in Trees Implementation	389
16.4	Ballistic Deposition (Problem 3)	390
16.4.1	Random Deposition Algorithm	390
16.5	Length of British Coastline (Problem 4)	391
16.5.1	Coastlines as Fractals (Model)	392
16.5.2	Box Counting Algorithm	393
16.5.3	Coastline Implementation and Exercise	393
16.6	Correlated Growth, Forests, Films (Problem 5)	395
16.6.1	Correlated Ballistic Deposition Algorithm	395
16.7	Globular Cluster (Problem 6)	396
16.7.1	Diffusion-Limited Aggregation Algorithm	397
16.7.2	Fractal Assessment of DLA or a Pollock	399
16.8	Fractals in Bifurcation Plot (Problem 7)	400
16.9	Fractals from Cellular Automata	401
16.10	Perlin Noise Adds Realism \odot	403
16.10.1	Ray Tracing Algorithms	404

- 16.11 Exercises 408

- 17 Thermodynamic Simulations & Feynman Path Integrals 409**
 - 17.1 Magnets via Metropolis Algorithm 409
 - 17.2 An Ising Chain (Model) 410
 - 17.3 Statistical Mechanics (Theory) 412
 - 17.3.1 Analytic Solution 413
 - 17.4 Metropolis Algorithm 413
 - 17.4.1 Metropolis Algorithm Implementation 416
 - 17.4.2 Equilibration, Thermodynamic Properties 416
 - 17.4.3 Beyond Nearest Neighbors, 1-D (Exploration) 419
 - 17.5 Magnets via Wang-Landau Sampling \odot 420
 - 17.6 Wang-Landau Algorithm 423
 - 17.6.1 Ising Model Implementation 424
 - 17.6.2 Assessment 428
 - 17.7 Feynman Path Integral Quantum Mechanics \odot 428
 - 17.8 Feynman's Space-Time Propagation (Theory) 429
 - 17.8.1 Bound-State Wave Function (Theory) 431
 - 17.8.2 Lattice Path Integration (Algorithm) 432
 - 17.8.3 Lattice Implementation 437
 - 17.8.4 Assessment and Exploration 440
 - 17.9 Exploration: Quantum Bouncer's Paths \odot 440

- 18 Molecular Dynamics Simulations 445**
 - 18.1 Molecular Dynamics (Theory) 445
 - 18.1.1 Connection to Thermodynamic Variables 449
 - 18.1.2 Setting Initial Velocities 449
 - 18.1.3 Periodic Boundary Conditions & $V(r)$ Cutoff 450
 - 18.2 Verlet and Velocity-Verlet Algorithms 451
 - 18.3 1-D Implementation and Exercise 453
 - 18.4 Analysis 456

- 19 PDE Review 461**
 - 19.1 PDE Generalities 461
 - 19.2 Electrostatic Potentials 463
 - 19.2.1 Laplace's Elliptic PDE (Theory) 463
 - 19.3 Fourier Series Solution of a PDE 464
 - 19.3.1 Polynomial Expansion As an Algorithm 466
 - 19.4 Finite-Difference Algorithm 467
 - 19.4.1 Relaxation and Overrelaxation 469
 - 19.4.2 Lattice PDE Implementation 470
 - 19.5 Assessment via Surface Plot 471
 - 19.6 Alternate Capacitor Problems 472
 - 19.7 Implementation and Assessment 474
 - 19.8 Electric Field Visualization (Exploration) 475

- 19.9 Review Exercise 475
- 20 Heat Flow via Time Stepping 477**
 - 20.1 Heat Flow via Time-Stepping (Leapfrog) 477
 - 20.2 The Parabolic Heat Equation (Theory) 478
 - 20.2.1 Solution: Analytic Expansion 478
 - 20.2.2 Solution: Time-Stepping 479
 - 20.2.3 Von Neumann Stability Assessment 481
 - 20.2.4 Heat Equation Implementation 483
 - 20.3 Assessment and Visualization 483
 - 20.4 Improved Heat Flow: Crank-Nicolson Method 485
 - 20.4.1 Solution of Tridiagonal Matrix Equations \odot 487
 - 20.4.2 Implementation, Assessment 489
- 21 Wave Equations I: Strings & Membranes 491**
 - 21.1 **A Vibrating String 491**
 - 21.2 The Hyperbolic Wave Equation (Theory) 491
 - 21.2.1 Solution via Normal-Mode Expansion 493
 - 21.2.2 Algorithm: Time-Stepping 494
 - 21.2.3 Wave Equation Implementation 497
 - 21.2.4 Assessment, Exploration 498
 - 21.3 Strings with Friction (Extension) 499
 - 21.4 Strings with Variable Tension & Density 500
 - 21.4.1 Waves on Catenary 501
 - 21.4.2 Derivation of Catenary Shape 501
 - 21.4.3 Catenary & Frictional Wave Exercises 502
 - 21.5 **Vibrating Membrane (2-D Waves) 503**
 - 21.6 Analytical Solution 505
 - 21.7 Numerical Solution for 2-D Waves 508
- 22 Wave Equations II: Quantum Packets & E-M 511**
 - 22.1 **Quantum Wave Packets 511**
 - 22.2 Time-Dependent Schrödinger Equation (Theory) 511
 - 22.2.1 Finite-Difference Algorithm 513
 - 22.2.2 Wave Packet Implementation, Animation 514
 - 22.2.3 Wave Packets in Other Wells (Exploration) 515
 - 22.3 Algorithm for the 2-D Schrödinger Equation 516
 - 22.3.1 Exploration: Bound & Diffracted 2-D Packet 518
 - 22.4 **E&M Waves via Finite-Difference Time Domain 518**
 - 22.5 Maxwell's Equations 519
 - 22.6 FDTD Algorithm 519
 - 22.6.1 Implementation 523
 - 22.6.2 Assessment 525
 - 22.6.3 Extension: Circularly Polarized Waves 525
 - 22.7 Application: Wave Plates 527

x |

- 22.8 Algorithm 528
- 22.9 FDTD Exercise & Assessment 528

- 23 Electrostatics via Finite Elements 531**
- 23.1 **Finite-Element Method** \odot 531
- 23.2 Electric Field from Charge Density (Problem) 532
- 23.3 Analytic Solution 532
- 23.4 Finite-Element (Not Difference) Methods, 1-D 533
- 23.4.1 Weak Form of PDE 533
- 23.4.2 Galerkin Spectral Decomposition 534
- 23.5 1-D FEM Implementation and Exercises 538
- 23.5.1 1-D Exploration 540
- 23.6 Extension to 2-D Finite Elements 541
- 23.6.1 Weak Form of PDE 542
- 23.6.2 Galerkin's Spectral Decomposition 542
- 23.6.3 Triangular Elements 543
- 23.6.4 Solution as Linear Equations 545
- 23.6.5 Imposing Boundary Conditions 545
- 23.6.6 FEM 2D Implementation & Exercise 548
- 23.6.7 FEM 2D Exercises 548

- 24 Shock Waves and Solitons 549**
- 24.1 **Shocks & Solitons in Shallow Water** 549
- 24.2 Theory: Continuity and Advection Equations 551
- 24.2.1 Advection Implementation 551
- 24.3 Theory: Shock Waves via Burgers' Equation 552
- 24.3.1 Lax-Wendroff Algorithm for Burgers' Equation 553
- 24.3.2 Implementation and Assessment 555
- 24.4 Including Dispersion 555
- 24.5 Shallow-Water Solitons; the KdV Equation 556
- 24.5.1 Analytic Soliton Solution 558
- 24.5.2 Algorithm for KdV Solitons 558
- 24.5.3 Implementation: KdV Solitons 559
- 24.5.4 Exploration: Solitons in Phase Space, Crossing 561
- 24.6 **Solitons on Pendulum Chain** 562
- 24.6.1 Including Dispersion 563
- 24.6.2 Continuum Limit, the SGE 565
- 24.6.3 Analytic SGE Solution 565
- 24.6.4 Numeric Solution: 2-D SGE Solitons 566
- 24.6.5 2-D Soliton Implementation 568
- 24.6.6 Visualization 568

- 25 Fluid Dynamics 569**
- 25.1 River Hydrodynamics 569
- 25.2 Navier-Stokes Equation (Theory) 570

25.2.1	Boundary Conditions for Parallel Plates	572
25.2.2	Analytic Solution for Parallel Plates	574
25.2.3	Finite-Difference Algorithm and Overrelaxation	575
25.2.4	Successive Overrelaxation Implementation	576
25.3	2-D Flow over a Beam	577
25.4	Theory: Vorticity Form of Navier-Stokes Equation	577
25.4.1	Finite Differences and the SOR Algorithm	579
25.4.2	Boundary Conditions for a Beam	580
25.4.3	SOR on a Grid	583
25.4.4	Flow Assessment	584
25.4.5	Exploration	585
26	Integral Equations of Quantum Mechanics	587
26.1	Bound States of Nonlocal Potentials	588
26.2	Momentum-Space Schrödinger Equation (Theory)	588
26.2.1	Integral to Matrix Equations	589
26.2.2	Delta-Shell Potential (Model)	591
26.2.3	Binding Energies Solution	591
26.2.4	Wave Function (Exploration)	593
26.3	Scattering States of Nonlocal Potentials ☉	593
26.4	Lippmann-Schwinger Equation (Theory)	593
26.4.1	Singular Integrals (Math)	594
26.4.2	Numerical Principal Values	595
26.4.3	Reducing Integral to Matrix Equations	596
26.4.4	Solution via Inversion, Elimination	597
26.4.5	Scattering Implementation	599
26.4.6	Scattering Wave Function (Exploration)	600
A	Codes, Applets & Animations	601
B	Video Lecture Modules	605
