Challenges in Collaboration:

The enterprise guide to the future of teamwork

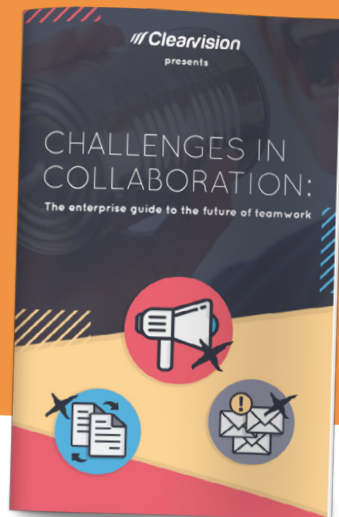

At last year's Atlassian Summit, we surveyed those in attendance to find out about the biggest pain points enterprise organisations face.

The biggest challenge that emerged was around collaboration, with scaling coming in at a close second. The two are closely linked: as organisations grow and become increasingly global, scaling collaborative tools and processes across distributed teams becomes trickier.

With information direct from the expert talks at Summit, this white paper explores:

- Disparate teams
- Information and decision making silos
- Too many email and meetings
- Tool integration
- Resource planning
- Data security
- Process adoption

Collaboration Tools and Trends:

Lessons learned from Silicon Valley

The following white paper provides an essential guide to improving collaboration in the workplace.

Developing software is big business. From gaming behemoths like Activision to financial institutions like HSBC, a lot is demanded from software, and the projects these organisations undertake to deliver this software are on near-unimaginable scale.

But they can and do deliver, and so over the years these big players have learned a thing or two about overcoming the inherent challenges in being a global leader. From adopting Agile working and continuous improvement, to picking the perfect tool for the job, these organizations have turned collaborating at scale into a fine art.

The best thing about these practices is that they aren't confined to software development.

Your business, regardless of industry or size, can adopt these same tools and processes! Here, we shed light on how some of the enterprise organizations we work with collaborate to improve communication, drive productivity and stay competitive.

“Adapt or die” in the face of digital disruption

At Clearvision's recent BBQ in the Cloud event in London, one phrase was repeated throughout the day: digital disruption.

This isn't surprising. We see digital disruption in the news every day, from Uber to Tinder - disruption is now synonymous with Silicon Valley and the most successful of tech businesses.

With advances in technology disrupting traditional business practices, it's more essential than ever for a business strategy to allow itself the room to adapt and adopt the tools and practices of this new digital age. Otherwise, there's a real risk of being left behind - or even becoming obsolete.
