Agenda

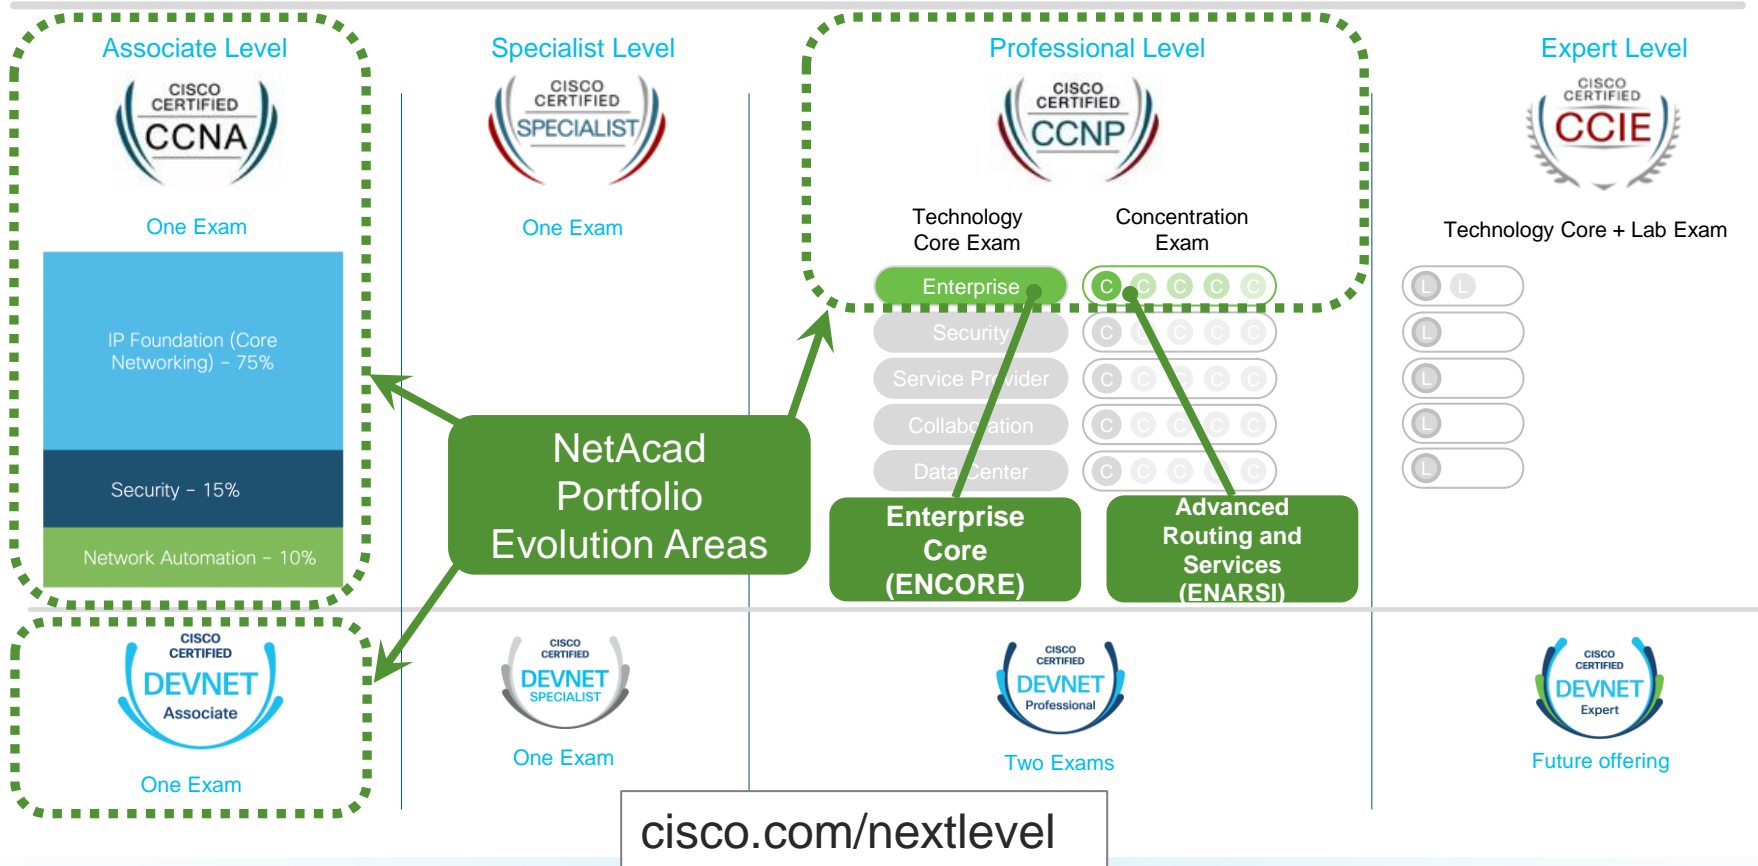

- 1 New Cisco Certifications
- 2 CCNA 7
- 3 CCNP 8
- 4 Digital Badges
- 5 Packet Tracer 7.3
- 6 CyberOps Associate
- 7 Emerging Technologies Workshops
- 8 DevNet Associate
- 9 Professional Development

New Certifications and CCNA 7.0

Cisco's Expanded Certification Suite

CCNA 7.0 Course Outlines

Intro to Networks (ITN)
Networking Today
Basic Switch and End Device Configuration
Protocol Models
Physical Layer
Number Systems
Data Link Layer
Ethernet Switching
Network Layer
Address Resolution
Basic Router Configuration
IPv4 Addressing
IPv6 Addressing
ICMP
Transport Layer
Application Layer
Network Security Fundamentals
Build a Small Network

Switching, Routing, and Wireless Essentials (SRWE)
Basic Device Configuration
Switching Concepts
VLANs
Inter-VLAN Routing
STP
Etherchannel
DHCPv4
SLAAC and DHCPv6 Concepts
FHRP Concepts
LAN Security Concepts
Switch Security Configuration
WLAN Concepts
WLAN Configuration
Routing Concepts
IP Static Routing
Troubleshoot Static and Default Routes

Enterprise Networking, Security and Automation (ENSA)
Single-Area OSPFv2 Concepts
Single-Area OSPFv2 Configuration
WAN Concepts
Network Security Concepts
ACL Concepts
ACLs for IPv4 Configuration
NAT for IPv4
VPN and IPsec Concepts
QoS Concepts
Network Management
Network Design
Network Troubleshooting
Network Virtualization
Network Automation

Slovakia: 26 active CCENT-accredited instructors

Czechia: 23 active CCENT-accredited instructors

Teach CCNA R&S 1-2?

What will be your plan?

- CCENT certification for NetAcad students until 31 July 2020
- CCNA 7.0 1-2 students will not be certification-ready
- No dynamic routing, NAT, ACL taught in CCNA 1-2

Teach full CCNA
R&S?

What are you going
to add?

- The duration is ~25% less
- Many topics moved to CCNP
- Variety of other NetAcad courses to consider

Explore

Introduction to exciting opportunities in technology.

- ▲ Get Connected
- ▲ Introduction to Packet Tracer
- ▲ NDG Linux Unhatched
- ▲ Cybersecurity Essentials
- ▲ Introduction to Cybersecurity
- ▲ Introduction to IoT
- Networking Essentials
- ▲ Entrepreneurship

Career

Preparation for entry level positions.

-  **Digital Essentials** ★ ● ■ IT Essentials ● ▲ PCAP: Programming Essentials in Python
 ● ▲ NDG Linux Essentials ■ Hackathon Playbook (Design Thinking)

- CPA: Programming Essentials in C++
- CPP: Advanced Programming in C++

CCNA & CCNA Cyber Ops Exam Pricing

As of Feb 24, 2020

Cisco is moving to a Country Pricing Model for select exams

- Exam pricing will be based on the Country in which you sit for the certification exam
 - Countries in Group 1 - \$300
 - Countries in Group 2 - \$255 ← **Czechia, Slovakia**
 - Countries in Group 3 - \$195
- Qualifying Networking Academy Participants will still receive discounts
 - Students** with NetAcad discount will pay ~**\$125** in all Country Groups
 - Instructors** with NetAcad discount will pay ~**\$90** in all Country Groups
 - Instructor Trainers** with NetAcad discount will pay ~**\$65** in all Country Groups
- To learn more about Certification Pricing and Costs per Country please visit:
<http://www.vue.com/vouchers/pricelist/cisco.asp#prices>

Final Exam Voucher Eligibility

CCNA 6.0 Connecting Networks

CCNA 7.0 Enterprise Networking,
Security and Automation,

CCNA 6.0 vs 7.0 – Lab Equipment

Various end devices

For CCNAv7 Please Note:

- Serial ports **not required**
- PT version 7.3 **required**

PT used for 3-
 router/switch
 topologies

Various end devices

CCNP 8.0

Certification & Exam Alignment

Certification Alignment

Professional Level

Core Exam

Enterprise Core

Concentration Exam

Enterprise Advanced Routing & Services

- Cisco has evolved to a new CCNP Enterprise certification streamlined to require passing two exams
- The **Enterprise Core exam (350-401)** tests a candidate's knowledge of implementing core enterprise network technologies including dual stack architecture, virtualization, infrastructure, network assurance, security and automation and earns a **Cisco Specialist certification for Enterprise Core**
- The **Enterprise Advanced Routing and Services exam (300-410)** tests a candidate's knowledge for implementation and troubleshooting of advanced routing technologies and services including Layer 3, VPN services, infrastructure security, infrastructure services, and infrastructure automation and earns a **Cisco Specialist certification for Enterprise Advanced Infrastructure Implementation**
- Passing both exams earns a **CCNP Enterprise certification**

CCNP Enterprise: Core Networking (ENCOR) Leveraged and Key New Topics

Leveraged course material

ROUTE

SWITCH

TSHOOT

CCNA
Security

CCNA
R&S v6

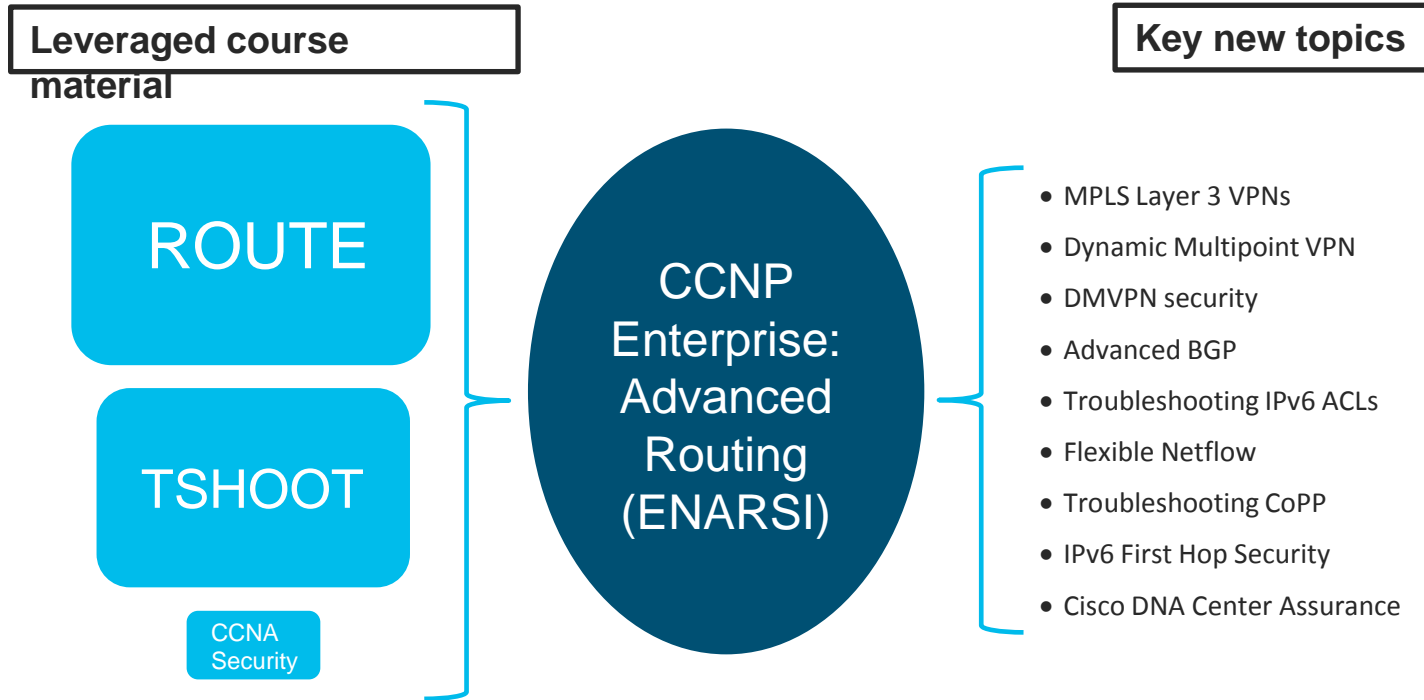

CCNP
Enterprise:
Core
Networking
(ENCOR)

Key new topics

- Wireless (RF, infrastructure, roaming, authenticating, troubleshooting)
- Multicast (concepts, protocols)
- Fabric technologies (SD-Access, SD-WAN)
- Overlay tunnels (IPSec, VXLAN, LISP)
- QoS (mechanisms, applications)
- Security (network access control, threat defense, endpoint and infrastructure security)
- Programmability concepts (APIs, data models, DevNet, GitHub, Python basics)
- Virtualization concepts (NFV, VMs, virtual switching)
- Automation tools (Embedded Event Manager, Agent and Agentless tools)

CCNP Enterprise: Advanced Routing (ENARSI) Leveraged and Key New Topics

Course Content

Both courses require the Cisco Press Official Cert Guide as student textbook

Certification Guide
Available in book and e-Book formats

Book

Digital Badges

Information In A Digital Badge

What the badge represents

- What the individual has done to earn the badge
- The criteria that the badge has been assessed against
- The badge earner's unique evidence (optionally included)
- When the badge was issued and whether it has expired

Who earned it

- That the badge was issued to the expected recipient (email)

Who issued it

- Details about the organization issuing the badge

Information

acclaim
by Credly

This badge was issued to [ALAN MURRAY JR.](#) on 1 February 2019.
Expires on 15 February 2022

Verify

[Additional
Details](#)

CCNA: Switching, Routing, and Wireless Essentials

Issued by [Cisco](#)

Cisco verifies the earner of this badge successfully completed the Switching, Routing, and Wireless Essentials course and achieved this student level credential. Has a foundation in switching operations, wired and wireless LAN configuration using security best practices, redundancy protocols, and developed problem-solving skills. Earner participated in up to 45 practice activities and accumulated up to 21 hours of hands-on labs using Cisco hardware and/or the Cisco Packet Tracer simulation tool.

Skills

Access Connectivity

Access Security

First-hop Redundancy

High Availability

IP Services

Routing

Switching Protocols

Wireless LAN Controllers

Earning Criteria

- Passing grade from Networking Academy instructor
- Passing score on final exam.

← Recipient

← Badge Name

← Issuer

← Description

← Skills/Knowledge

← Criteria

Two Types of Networking Academy Badges

For Course Completion

- Achieve minimum qualification score on first attempt of final exam
- Complete end of course survey
- Marked Pass/Completed by instructor

For Recognition

- 1, 5, 10, 15 and 20 years of active instructor
- Multiply for Growth program
- Learn-A-Thons

Earning & Accepting a Networking Academy Badge

Step 1

Complete the criteria required to earn the badge

Step 2

Receive an email from Acclaim with instructions

Step 3

Accept your badge on Acclaim, it's free for life!

Step 4

Share your badge on resume and social media

Packet Tracer 7.3

Packet Tracer 7.3

- Supports CCNA 7 & released together with CCNA 7
- New ISR 4331 router to support new topics
- New enhanced 3504 WLC wireless LAN controller
- Dynamic ARP Inspection (DAI)
- DHCP snooping fixes and enhancements
- Section output modifier for show commands
- Improved user authentication: when student takes online PTSA, authentication is not required
- Major GUI framework upgrade for better accessibility and usability

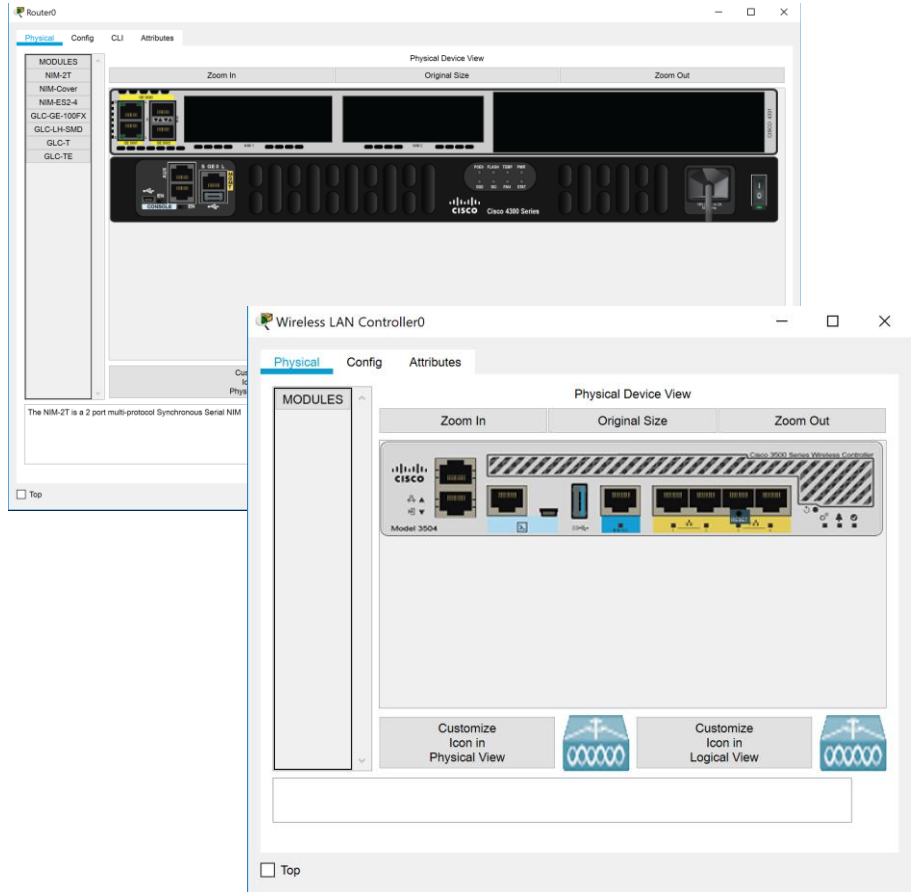

New Devices Details

Cisco 4331 ISR

- 1 GE/SFP, 1 GE, 1 SFP integrated WAN ports
- 2 NIM slots

Cisco 3504 WLC

- Provides centralized control, management, and troubleshooting next-gen wireless networks

CyberOps Associate

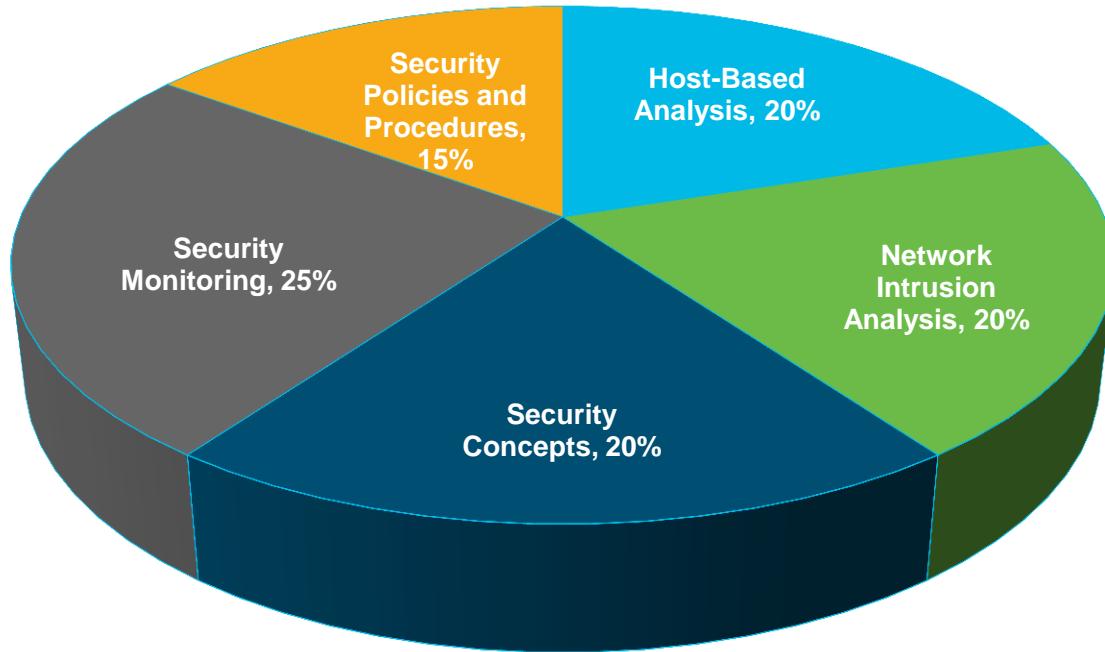

CyberOps Associate – What's changing?

- Certification is streamlining and simplifying
- Two 90 min exams will be merged to one 120 min exam
- CYBROPS exam will primarily focus on security concepts and analysis
- It reduces explicit focus on networking fundamentals

Certification exam topics

- Security Policies and Procedures is a new exam topic
- CyberOps Associate is more vendor neutral
- It enables students to think about the right datapoints/considerations in the evolving landscape

What's new ?

Security Policies and Procedures

Added

Types of attacks :Man-in-the-middle, DoS, DDoS

Updated

Foundation knowledge focused
on the network

Simplified

Increased
focus on
SecOps

NetAcad CyberOps Associate Course

NetAcad will revise CCNA CyberOps as CyberOps Associate course

It will align to the Cisco CyberOps Associate certification

The course will focus on

- ❖ Security Monitoring
- ❖ Host based analysis
- ❖ Network intrusion analysis

No prerequisites

Cyber Ops Associate

DRAFT

Equipment Requirements

4 VM's

Simplified Lab
Setup

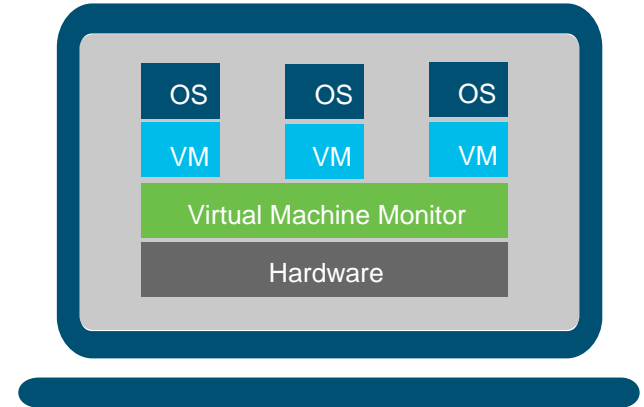

2 VM's

Cyber Ops Associate

DRAFT

Equipment Requirements

Virtual Machine	Disk Space	RAM
CyberOps Workstation VM	7 GB	1 GB
Security Onion VM (ELK tool)	20 GB	4 GB Min /8GB Recommended

Lab Setup

NetAcad CyberOps Associate course - Instructor

All existing CCNA CyberOps instructors will be accredited to teach the CyberOps Associate course

Emerging Technologies Workshops

Cisco DNA & Emerging Tech Workshops

Emerging Technologies Workshop Experimenting with REST APIs using Webex Teams

Workshop Overview

The Experimenting with REST APIs using Cisco Spark workshop introduces you to the basic competencies needed to create applications and automate tasks using REST APIs, the most popular architecture for software integration in IT.

Benefits

In one day students will learn and practice Python programming skills and tasks, culminating in live interactions with the APIs on Cisco collaboration software using the Cisco Spark online platform.

Learning Outcomes

- Understand value, set-up and use the most prevalent software language (Python) and tools for network programmability.
- Join and engage in 3 professional communities of practice: GitLab, Stack Overflow and Cisco DevNet.
- Understand the importance of participating in professional communities of practice when doing work in the software domain.
- Describe the relevance of REST APIs architecture and perform basic software integration and automation using real-world APIs on an enterprise collaboration platform (Cisco Spark).

Features

Target Audience: Vocational, 2-year and 4-year College, 4-Year University students
Prerequisites: Basic programming
Languages: English
Course Delivery: Instructor-led
Equipment: FREE! Uses free online software tools.
Estimated Time to Complete: 4 hours
Recommended Insertion Points: PCAP Programming Essentials in Python, Connecting Things
Other Insertion Points: IT Essentials, CCNA RAS I/II
Instructor Training: Required, self-paced options available

Emerging Technologies Workshop Network Programmability with Cisco APIC-EM

Workshop Overview

The Network Programmability with Cisco APIC-EM workshop introduces you to the basic competencies to operate and automate management tasks on a controller-based network.

Benefits

In this workshop, students will learn and practice Python programming skills and tasks, culminating in live interactions with the APIs on Cisco programmable controllers using the Cisco DevNet Sandbox.

Learning Outcomes

- Understand the value, set-up and use of software concepts and tools relevant to network programmability (Python scripting, Git, JSON, Postman, APIs).
- Use the Cisco DevNet Sandbox to learn how to interact with programmable devices using real-world APIs on Cisco APIC-EM programmable controllers.
- Describe a different approach to software-defined networking (SDN), including central application policy control.
- Understand the value of joining professional communities of practice to working in the network programmability domain. Participate in Cisco DevNet, GitLab, and Stack Overflow.

Features

Target Audience: Vocational, 2-year and 4-year College, 4-year University students
Prerequisites: Basic programming, CCENT level networking
Languages: English
Course Delivery: Instructor-led
Equipment: FREE! Uses free online software tools.
Estimated Time to Complete: 4 hours
Recommended Insertion Points: Altn CCNA RAS course 2, with CCNA Security or CCNP RAS
Instructor Training: Required, self-paced option available

Cisco DNA & Emerging Tech Workshops

Experimenting with REST APIs using Webex Teams

Network Programmability using Cisco APIC-EM

Emerging Technologies Workshop
Model Driven Programmability

Workshop Overview

With the increasing rate of the modern network and the frequency of changes required by the business, managing and automating networks via a Command Line Interface (CLI) is ineffective and more error prone. A new approach, using Model Driven Programmability, enables streamlined changes, by setting standardized device models and APIs. This workshop introduces students to device level programmability capabilities, to automate configuration and management tasks using standard YANG device models and using the RESTCONF and NETCONF device level APIs.

Benefits

- Every networking student will benefit in adopting the capabilities of YANG as language to "model" the networking devices, combined with the robustness of the RESTCONF and NETCONF device level programmability APIs. Students will also experiment and develop Python scripts to manage networking devices at scale, using the OpenStack OpenFlow controller approach.

Learning Outcomes

- Understand the value, role and use of software concepts and tools relevant to network programmability (Python, YANG, CLI, RESTCONF, Postman, APIs).
- Describe a different approach to network management, including central application policy control.
- Use Python with combination of RESTCONF and NETWORK-APIs to retrieve and update the device's configuration.
- Understand the value of creating professional communities of practice to contribute to the network programmability domain. Participants will learn about Call Home, and Stack Overflow.

Features

Target Audience: Undergrad, 3-year and 4-year College, 4-year University students

Prerequisites: Basic programming, CCNA HSS Essentials level networking skills.

Languages: English

Course Delivery: instructor-led

Equipment: Virtual Cisco SD-WAN Router, DevNet Sandbox, or Real Equipment with Cisco IBSG licenses.

Estimated Time to Complete: 8 hours

Recommended Prerequisite: After CCNA HSS Essentials or CCNP HNS

Instructor Training: Not required, self-paced options available

Emerging Technologies Workshop

Model Driven Programmability

Workshop Overview

With the increasing size of the modern network and the frequency of changes required by the business, managing and automating networks via a Command Line Interface (CLI) is ineffective and error prone. A new approach, using Model Driven Programmability, enables transactional changes, by defining standardized device models and APIs. This workshop introduces students to device level programmability competencies, to automate configuration and management tasks using standardized YANG device models and using the RESTCONF and NETCONF device level APIs.

Benefits

Every networking student will benefit in grasping the importance of YANG, as language to “model” a networking device, combined with the robustness of the RESTCONF and NETCONF device level programmability APIs. Students will also experiment and develop Python scripts to manage networking devices at scale, using the Model Driven Programmability approach.

Learning Outcomes

- Understand the value, set-up and use of software concepts and tools relevant to network programmability (Python scripting, Git, JSON, Postman, APIs).
- Describe a different approach to software-defined networking (SDN), including central application policy control.
- Use Python with combination of RESTCONF and NETWORK APIs to retrieve and update the device's configuration
- Understand the value of joining professional communities of practice to working in the network programmability domain. Participate in Cisco DevNet, GitHub, and Stack Overflow.

Features

Target Audience: Vocational, 2-year and 4-year College, 4-year University students

Prerequisites: Basic programming, CCNA R&S Essentials level networking skills

Languages: English

Course Delivery: Instructor-led

Equipment: Virtual Cisco SW Router, DevNet Sandbox, or Real Equipment with Cisco ISR4k routers

Estimated Time to Complete: 8 hours

Recommended Insertion Points: After CCNA R&S Essentials, or CCNP R&S

Instructor Training: Required, self-paced option available

Equipment Required For The New Workshop

- 3 Flexibility Options:

1. Virtual Cisco SW Router

- Cisco CSR1000v software router
- Instructors need active NetAcad Maintenance access:

Determining if you are Signed up

1. Login to Cisco.com
2. Click on your profile icon in the top right corner
3. Click Manage Profile
4. Click Access Management
5. Under "Your Current Access" you will see the following, "You may have been granted additional service and support access. See your current access"
6. Click "your current access"
7. Any contracts you have; NetAcad Maintenance = 95698496

2. DevNet Sandbox reservation

- Free, Remote using VPN.

3. Real Equipment with Cisco ISR4k routers

- Academies with new CCNA Bundles

Lab – Setting Up the Lab Environment (Instructor Version)

Instructor Note: Red font color or gray highlights indicate text that appears in the instructor copy only.

Objectives

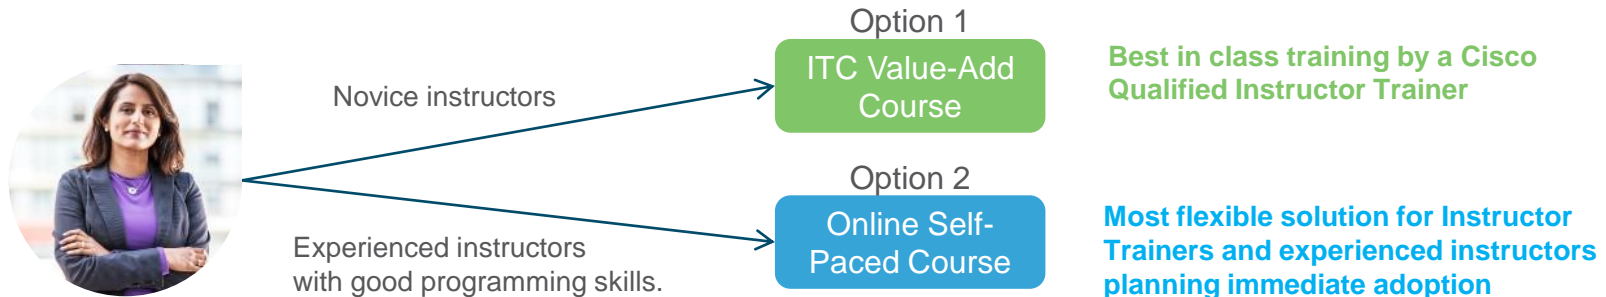

- Part 1 (Option 1): Import the VirtualBox VM with Cisco IOS-XE
- Part 1 (Option 2): Setup a Cisco ISR4k router with Cisco IOS-XE
- Part 1 (Option 3): Setup a DevNet Sandbox reservation with Cisco IOS-XE
- Part 2: Summary and Connection Details

Required Resources

- For Part 1 Option 1:
 - Host computer with at least 4 GB of RAM and 15 GB of free disk space
 - Oracle VirtualBox
- For Part 1 Option 2:
 - Host computer with at least 2GB of RAM
 - Cisco ISR4221 or ISR4321 router with IOS-XE version 16.6 or above.
- For Part 1 Option 3:
 - Host computer with at least 2GB of RAM
 - Internet Connectivity

How to access the new workshop?

- Globally available as Alpha in Limited Availability to all instructors
 - Check the Course Resources page for updates: www.netacad.com/portal/resources/course-resources
- Instructors can get their accreditation using the existing model for ETWs and IoTf:

- All accredited instructors will be able to immediately teach the workshop to their students.
- **Extend the skillset of your CCNA students with important network programmability skills today!**

ETWs vs. the DevNet Associate Course

Emerging Technologies Workshops

- From Buzzwords to Hello World on latest technologies
- 8h bite-sized learning
- Hello world level
- Very hands-on workshops
- Little theoretical background
- Quick way to get excitement about APIs

Goals:

- Expose CCNA students to single aspects of the Programmable Infrastructure
- Pave the way for the instructors towards the Programmable Infrastructure
- Our first offering in Programmable Infrastructure

DevNet Associate Course

- Gateway to Entry-level Networking and IT careers
- 70 hours = Fully Fledged Course
- Career-Ready
- Certification aligned
- Theoretical deep-dive into various topics
- Lot of hands-on lab activities
- Introduction of a Project Based Learning framework

Goals:

- Target new software audience, usable for CCNA students
- Get students ready to successfully pass the certification
- Our flagship offering in Programmable Infrastructure

DevNet Associate (200-901) Exam Topics

15%	1.0 Software Development and Design
20%	2.0 Understanding and Using APIs
15%	3.0 Cisco Platforms and Development
15%	4.0 Application Deployment and Security
20%	5.0 Infrastructure and Automation
15%	6.0 Network Fundamentals

DEVASC Domain #1: Software Development and Design (15%)

- 1.1 Compare data formats (XML, JSON, and YAML)
- 1.2 Describe parsing of common data format (XML, JSON, and YAML) to Python data structures
- 1.3 Describe the concepts of test-driven development
- 1.4 Compare software development methods (agile, lean, and waterfall)
- 1.5 Explain the benefits of organizing code into methods / functions, classes, and modules
- 1.6 Identify the advantages of common design patterns (MVC and Observer)
- 1.7 Explain the advantages of version control
- 1.8 Utilize common version control operations with Git
 - 1.8.a Clone
 - 1.8.b Add/remove
 - 1.8.c Commit
 - 1.8.d Push / pull
 - 1.8.e Branch
 - 1.8.f Merge and handling conflicts
 - 1.8.g diff

DEVASC Domain #2: Understanding and Using APIs (20%)

- 2.1 Construct a REST API request to accomplish a task given API documentation
- 2.2 Describe common usage patterns related to webhooks
- 2.3 Identify the constraints when consuming APIs
- 2.4 Explain common HTTP response codes associated with REST APIs
- 2.5 Troubleshoot a problem given the HTTP response code, request and API documentation
- 2.6 Identify the parts of an HTTP response (response code, headers, body)
- 2.7 Utilize common API authentication mechanisms: basic, custom token, and API keys
- 2.8 Compare common API styles (REST, RPC, synchronous, and asynchronous)
- 2.9 Construct a Python script that calls a REST API using the requests library

DEVASC Domain #3: Cisco Platforms and Development (15%)

- 3.1 Construct a Python script that uses a Cisco SDK given SDK documentation
- 3.2 Describe the capabilities of Cisco network management platforms and APIs (Meraki, Cisco DNA Center, ACI, Cisco SD-WAN, and NSO)
- 3.3 Describe the capabilities of Cisco compute management platforms and APIs (UCS Manager, UCS Director, and Intersight)
- 3.4 Describe the capabilities of Cisco collaboration platforms and APIs (Webex Teams, Webex devices, Cisco Unified Communication Manager including AXL and UDS interfaces, and Finesse)
- 3.5 Describe the capabilities of Cisco security platforms and APIs (Firepower, Umbrella, AMP, ISE, and ThreatGrid)
- 3.6 Describe the device level APIs and dynamic interfaces for IOS XE and NX-OS
- 3.7 Identify the appropriate DevNet resource for a given scenario (Sandbox, Code Exchange, support, forums, Learning Labs, and API documentation)
- 3.8 Apply concepts of model driven programmability (YANG, RESTCONF, and NETCONF) in a Cisco environment
- 3.9 Construct code to perform a specific operation based on a set of requirements and given API reference documentation such as these:
 - 3.9 a Obtain a list of network devices by using Meraki, Cisco DNA Center, ACI, Cisco SD-WAN, or NSO
 - 3.9 b Manage spaces, participants, and messages in Webex Teams
 - 3.9 c Obtain a list of clients / hosts seen on a network using Meraki or Cisco DNA Center

DEVASC Domain #4: Application Deployment and Security (15%)

- 4.1 Describe benefits of edge computing
- 4.2 Identify attributes of different application deployment models (private cloud, public cloud, hybrid cloud, and edge)
- 4.3 Identify the attributes of these application deployment types
 - 4.3.a Virtual machines
 - 4.3.b Bare metal
 - 4.3.c Containers
- 4.4 Describe components for a CI/CD pipeline in application deployments
- 4.5 Construct a Python unit test
- 4.6 Interpret contents of a Dockerfile
- 4.7 Utilize Docker images in local developer environment
- 4.8 Identify application security issues related to secret protection, encryption (storage and transport), and data handling
- 4.9 Explain how firewall, DNS, load balancers, and reverse proxy in application deployment
- 4.10 Describe top OWASP threats (such as XSS, SQL injections, and CSRF)
- 4.11 Utilize Bash commands (file management, directory navigation, and environmental variables)
- 4.12 Identify the principles of DevOps practices

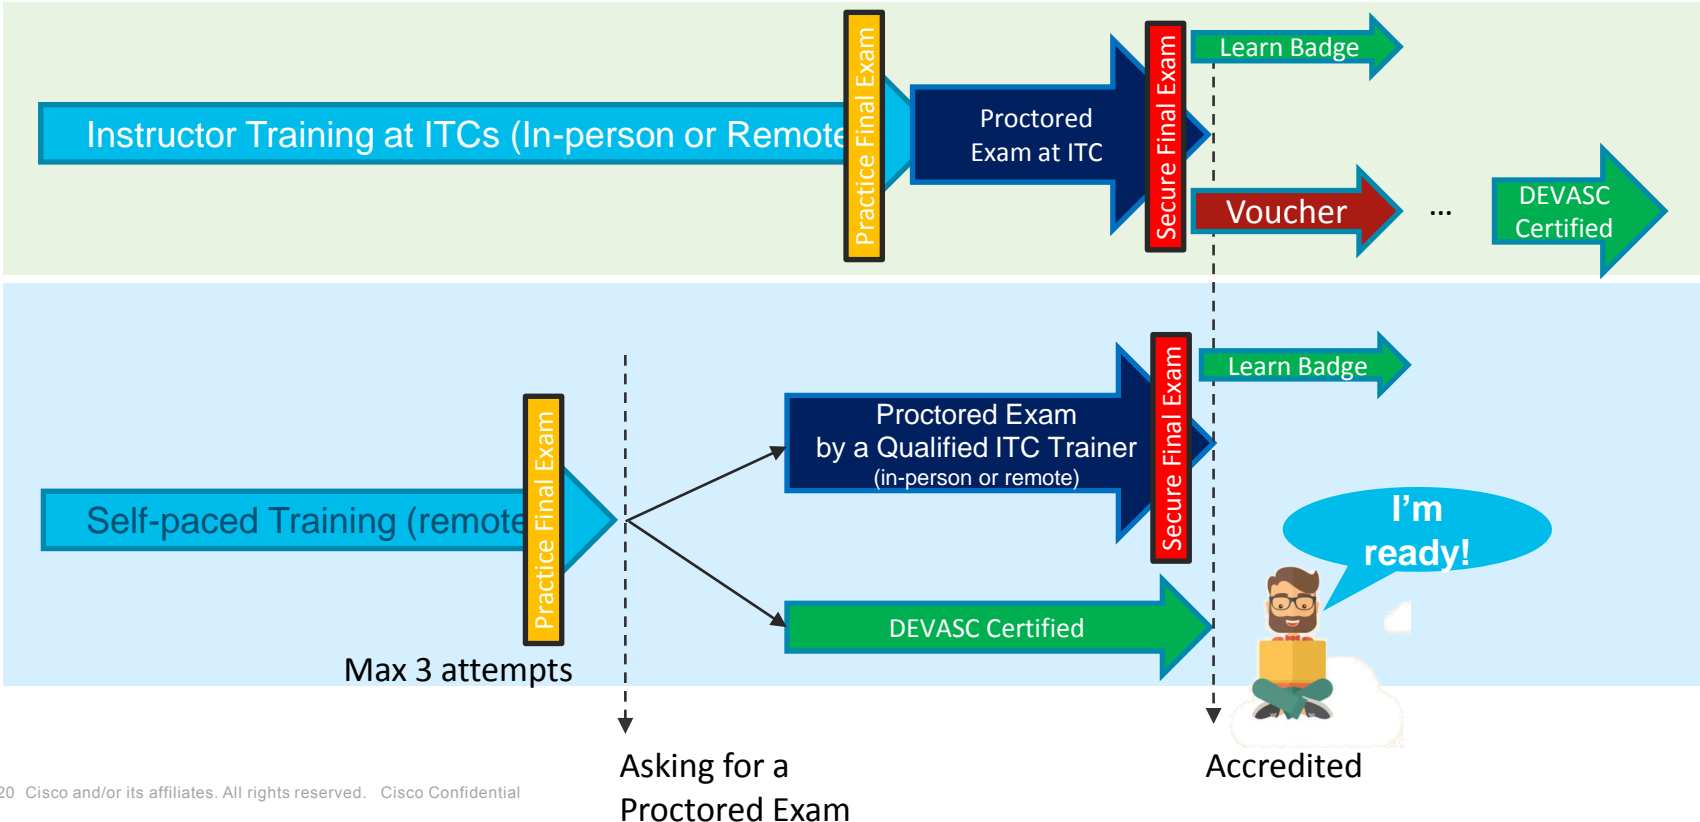

DEVASC Domain #5: Infrastructure and Automation (20%)

- 5.1 Describe the value of model driven programmability for infrastructure automation
- 5.2 Compare controller-level to device-level management
- 5.3 Describe the use and roles of network simulation and test tools (such as VIRL and pyATS)
- 5.4 Describe the components and benefits of CI/CD pipeline in infrastructure automation
- 5.5 Describe principles of infrastructure as code
- 5.6 Describe the capabilities of automation tools such as Ansible, Puppet, Chef, and Cisco NSO
- 5.7 Identify the workflow being automated by a Python script that uses Cisco APIs including ACI, Meraki, Cisco DNA Center, or RESTCONF
- 5.8 Identify the workflow being automated by an Ansible playbook (management packages, user management related to services, basic service configuration, and start/stop)
- 5.9 Identify the workflow being automated by a bash script (such as file management, app install, user management, directory navigation)
- 5.10 Interpret the results of a RESTCONF or NETCONF query
- 5.11 Interpret basic YANG models
- 5.12 Interpret a unified diff
- 5.13 Describe the principles and benefits of a code review process
- 5.14 Interpret sequence diagram that includes API calls

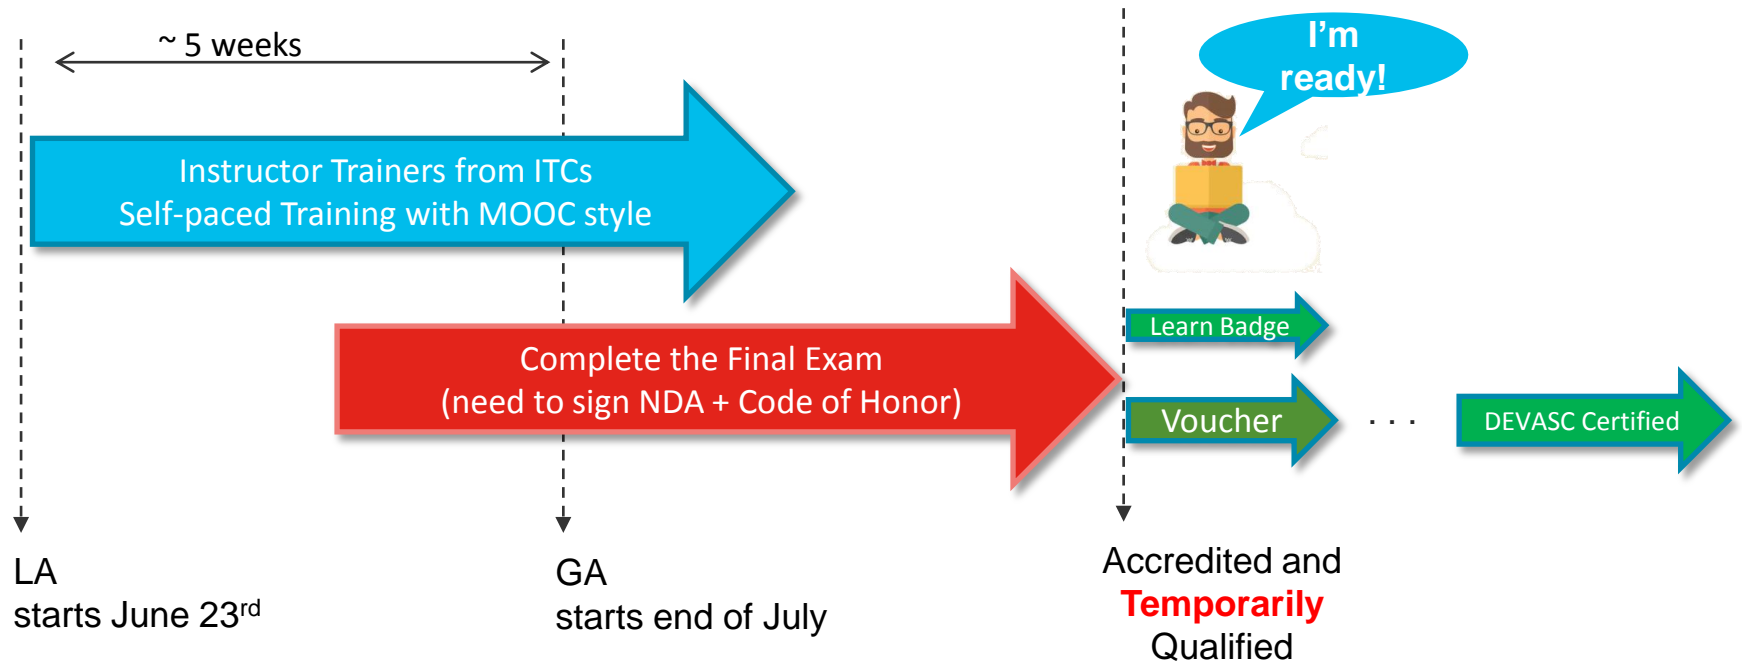

DEVASC Domain #6: Network Fundamentals (15%)

- 6.1 Describe the purpose and usage of MAC addresses and VLANs
- 6.2 Describe the purpose and usage of IP addresses, routes, subnet mask / prefix, and gateways
- 6.3 Describe the function of common networking components (such as switches, routers, firewalls, and load balancers)
- 6.4 Interpret a basic network topology diagram with elements such as switches, routers, firewalls, load balancers, and port values
- 6.5 Describe the function of management, data, and control planes in a network device
- 6.6 Describe the functionality of these IP Services: DHCP, DNS, NAT, SNMP, NTP
- 6.7 Recognize common protocol port values (such as, SSH, Telnet, HTTP, HTTPS, and NETCONF)
- 6.8 Identify cause of application connectivity issues (NAT problem, Transport Port blocked, proxy, and VPN)
- 6.9 Explain the impacts of network constraints on applications
