Agenda

- Savage Arms History
- Products, Customers, & Innovations
- Burning Platform (a call to action)
- Our Lean Journey (changing course)
- Continuous Improvement in Action
- Lessons Learned
- Next Steps

Our History . . .

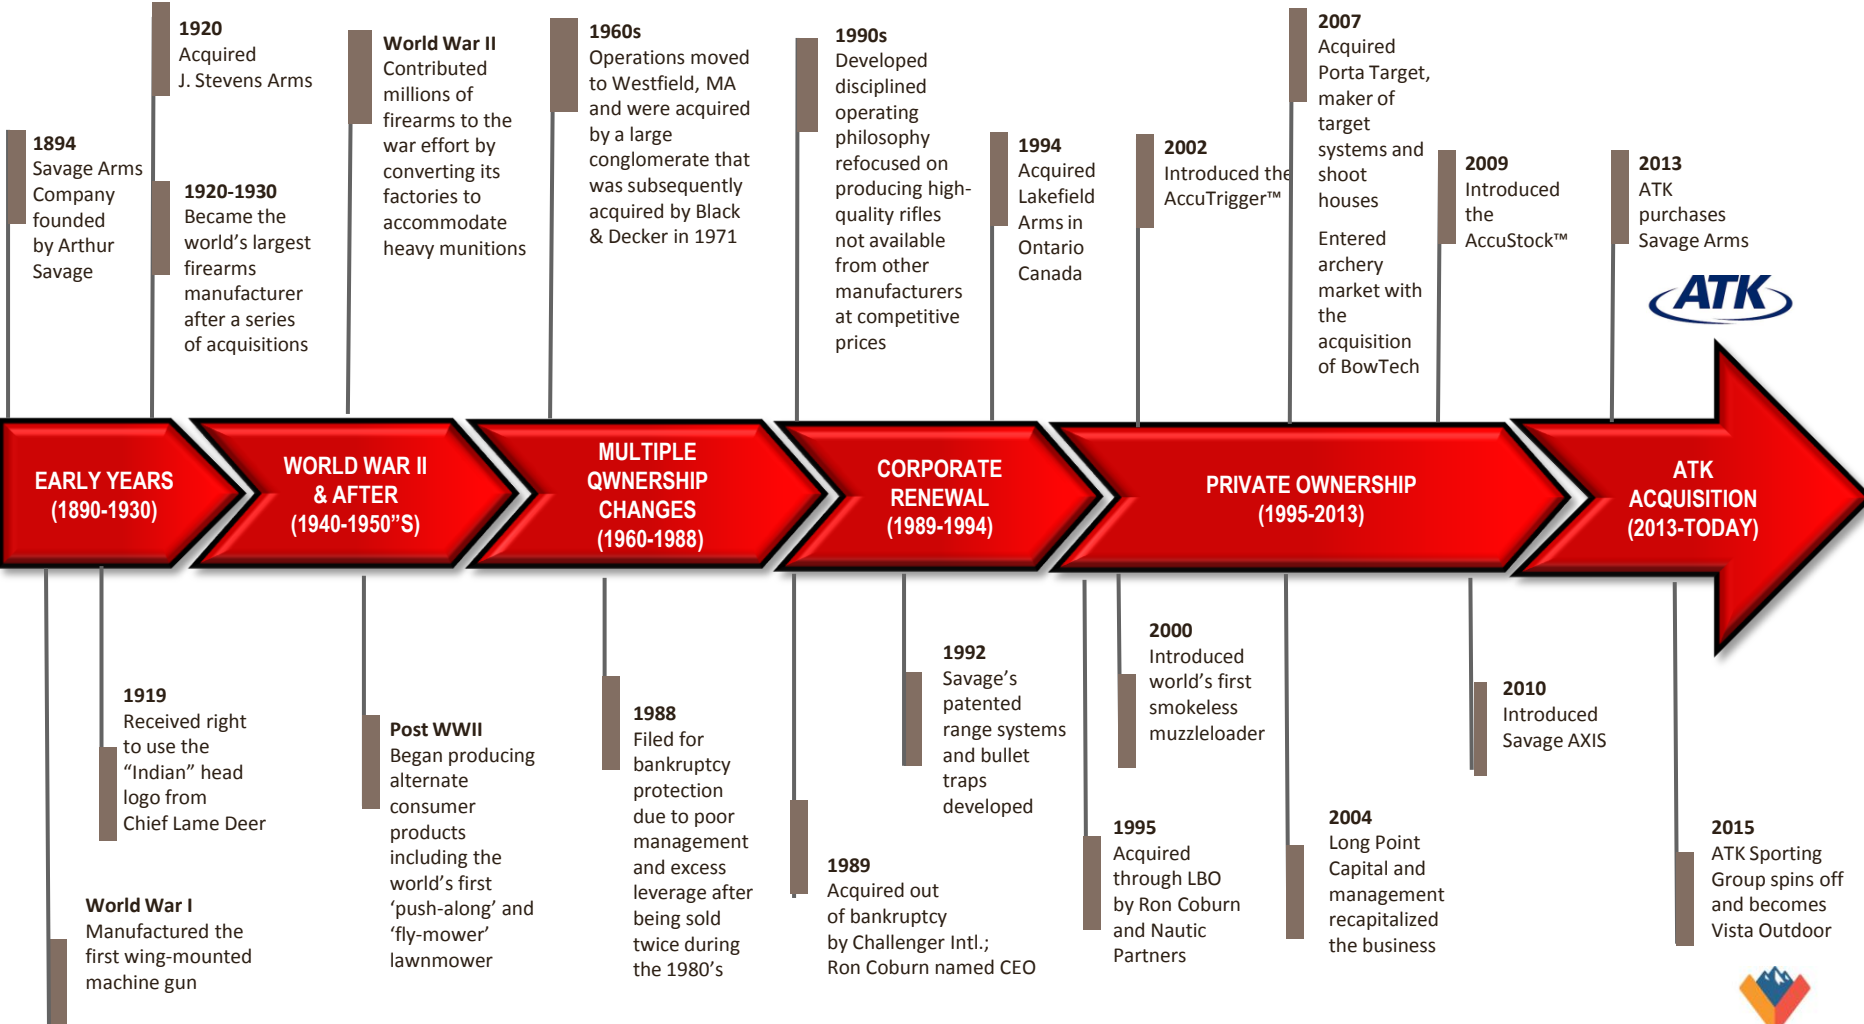

Savage Arms
The Definition of Accuracy

Arthur Savage

The Savage Arms Company was organized in 1894 by Arthur Savage in Utica, New York.

He developed the Savage Halpine torpedo, became the Superintendent of the Utica Belt Line Railroad, and invented the first "hammerless" lever action rifle .

THE SAVAGE STORY

Today . . .

Savage Arms

Westfield, MA

CHAMPION

CCI

Our Products . . . Model 10/110

Introduced in 1958

Over 1 Million Model 110's produced

- Action design has become the blueprint & standard for accuracy in firearms design throughout the industry
- Very strong & robust action: Able to handle high performance cartridges such as: .300 WM & .338 Lapua
- Very versatile design with 100's of configurations

Savage

#1 Centerfire rifle manufacturer

#1 Bolt action rimfire rifle manufacturer

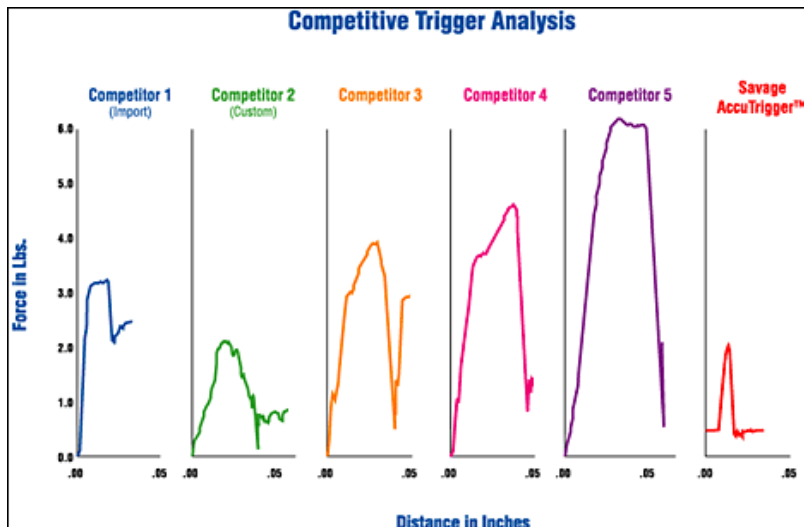

Innovative Design

THE NEW INDUSTRY STANDARD: Savage **ACCUTRIGGER**

- User Adjustable trigger: (6oz – 6 lbs depending on model)
- No paying gunsmith to get a “trigger job” or purchasing an aftermarket trigger \$\$\$
- Very crisp with no creep
- Extremely Safe

Innovative Design

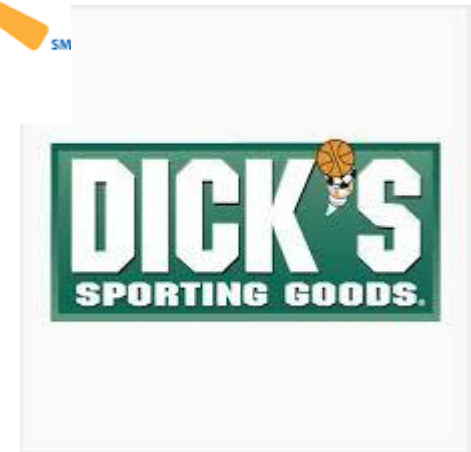

New for 2015

A17 Autoloader – 17 HMR

Before Lean: Batch & Queue Culture

Our Burning Platform

- Double digit defect rate **23%**
- Long lead time to the customer **Months**
- Large batch sizes **120**
- Multiple non-connected processes **16 Days WIP**
- Unreliable equipment/breakdowns **No TPM**
- Command and control management style
- Could not keep up with Sales at **550 Guns/Day**
- **Dirty and Cluttered Production Environment**
- **BUT VERY SUCCESSFUL !!!**

Our Lean Journey Begins . . .

Our 3 Main Value Streams

Barrels

Receivers

Assembly

Creating a Lean Culture

- TOTAL SUPPORT from Top Management
- A Full Time Lean Expert at the top management level
- Formal Top Level G&O's / Use the Lean Platform to drive the G&O's
- Managers with Lean knowledge to manage the process
- Formal process of conducting Kaizen
- An adequate training room
- A need or crisis to change the culture

Lean tools available to Change the Culture

- **Use the tools in your Lean Toolbox where needed**
- Value Stream Mapping
- Start with quick wins like 6S
- Utilize TPM where the need to maintain equipment is crucial
- Use standard work as a compliment to 6S
- Train the Trainers

Lean tools available to Change the Culture

- Train everyone and keep the training going
- Celebrate all events
- Do not use excuses not to improve (month end, too busy, etc.)
- Try not to remove an employee from a Kaizen due to a production need
- Make the Kaizen no more than 5 days

Westfield Operations

FY2015 Operations Goals and Objectives

- 2400 Guns/Day (in a 5 day work week)
- Cost Reduction – \$1MM through Continuous Improvement
- New Product Introduction - Meet all project milestones, cost targets and product introduction dates
- Quality / Rework Improvement
- Inventory Reductions
- Equipment and Process Enhancements (TPM, Standard Work)
- Factory Layout
- Training Programs

FY 2015 Goals and Objectives

- Execute the Quality Management System (QA, ENG, MFG) – Barrel, Receiver, Assembly and Finishing Cells
- Execute the Quality Management System SPP (QA, SCM, ENG) - Top Ten Vendors
- Reduce range rejects to less than 3% for Axis and less than 5% for all other (QA, MFG, ENG)
- Negotiate a new 3 year labor contract (HR Director, VP Operations, CFO Accounting)
- Improve communications within Salaried ranks (HR and Staff)
- Ensure complete compliance with OSHA regulations (HR, ENG, MFG)
- Lean – **Engineering** to lead one Kaizen per month, **Manufacturing** to lead one Kaizen per month, **Maintenance** to lead one TPM per month (will depend on resources available). Service and Accounting/MIS one per quarter
- Cost reduction \$1.0 M (MFG, SCM, QA, ENG)
- New Products – Hit production date, cost target and improve overall process (MFG, SCM, QA, ENG)
- Production run rate at 1800 guns per day to 2400 guns per year by year end in a five day work schedule (MFG, SCM, QA, ENG)
- Standard Work (“Best Way”) (MFG, SCM, QA, ENG) Implement simultaneously in the Assembly, Finishing Department Processes and in Machining
- Training Create Job Breakdown Sheets and Training Timetables for Swing, Proof, Finishing, Ejector, Roll Stamp, Scope Mount, Build & Stock, Function, and Oil/Tag/Serialization Processes
- Employee Engagement (MFG, SCM, QA, ENG) Increase Employee Kaizen Participation (involve 2nd, and 3rd shift personnel)
Employees involved in improving their processes, employ daily team huddles
Enhance communication, awareness, and teamwork between employees
- Maintenance Excellence (MFG, SCM, QA, ENG) TPM Events (identify critical equipment and schedule events accordingly)
Improve machine safety, uptime, and create a renewed focus on energy conservation
- Problem Solving (MFG, SCM, QA, ENG) Utilize PDCA, and A3 Reports (data driven tool used as a plant wide problem solving tool)
- Continuous Flow (Assembly Department) (MFG, SCM, QA, ENG) Implement A Mag Rimfire Continuous Flowline (based on Axis Flowline)
Create an Ejector/Roll Stamp/Scope Mount Cell
- Value Stream Mapping (MFG, SCM, QA, ENG) Involve and train horizontal value stream process owners in VSM techniques
Utilize department VSM’s(Current & Future) to identify continuous improvements opportunities
- Visual Management/KPI’s (MFG, SCM, QA, ENG) Identify and track critical KPI’s to monitor in all departments (ex. Safety, Quality, Cost, Delivery, Training, 6S, Scrap)
- Plant Layout (MFG, SCM, QA, ENG) Implement 2013/2014 plant layout relocations in support of the approved 2015 Master Plan

LEAN TOOLBOX

KAIZEN EVENT AUTHORIZATION / PLAN

Process / Area / Department: Barrel Gun Drill Cell Date: 11-2-13
 Kaizen Type: SS/Standard Work Kaizen Name: Barrel Gun Drill Kaizen
 Kaizen Team Sponsor / Champion: Vince Carlow Facilitator: Job Anderson
 Management Support (1): Mike Gomez Management Support (2):

Kaizen Problem Statement: Finding, aging and works area is disorganized which results in area cables added, waste, missing, lost, the correct form that are required. Organize work, contain the equipment which, leads to process variation, scrap or rework parts and inefficiencies.

Kaizen Goal: Create standard work, visual training videos and updated OMS, bonds to train operators using job breakdown sheets and videos utilizing XZY Dashboard Monitor. Create a visual organized work area that will be maintained for all team members.

Targeted Measurement: Department setup report and daily shift reports.

Kaizen Team Participants:
 Name: Current Function:
 1. Jim Vlahovec Supervisor
 2. Ross Vign... Team Lead
 3. Jay Adams Manufacturing Engineer
 4. Tim Diney Repair Maintenance Mechanic
 5. Tim Gourse Repair Quality Technician
 6. Keith D...
 7. ...

Required Resources / Date: Employee survey of area issues and improvement ideas, cell sheets, current area problems/notes.
Anticipated Schedule (Date / Time): Work of 11-13-13
Meeting Location: Update Production/Learn Training Conference Room.

LIFE BEFORE 6S

Workplace Organization

6S Audit Finishing Department

Auditor(s): Frank Dany, Dave Castonguay, Jack Anderson Date: January 29, 2015

No.	Evaluation Criteria	Number of deviations found				
		SI	SI-O	SI-S	SI-T	0
1S - SORT ACTIVITY DESCRIPTIONS						
1	Do the required parts, materials, WIP and supplies are present in the work area?					
2	Do the required tools and equipment are present in the work area?					
3	Do the required documents is present in the work area?					
4	Unnecessary items (junk, clutter, broken or obsolete) have been removed from the general area?					
	Sub Total:	0	0	0	0	0
2S - SET IN ORDER ACTIVITY DESCRIPTIONS						
5	Locations for all parts, WIP and supplies are clearly defined and labeled?					
6	Equipment and Tools are properly labeled and have a clearly defined storage location?					
7	Documents are properly labeled and have a clearly defined storage location?					
8	Walkways, access to equipment, and work area boundaries are clearly defined?					
	Sub Total:	0	0	0	0	0
3S - SHINE ACTIVITY DESCRIPTIONS						
9	Storage containers, shelving and storage areas are clean and damage free?					
10	Tools and equipment clean, maintained and damage free?					
11	Work surfaces clean and damage free?					
12	Floors and walkways are clean and safe?					
13	Cleaning equipment available and ready to use?					
	Sub Total:	0	0	0	0	0
4S - STANDARDIZE ACTIVITY DESCRIPTIONS						
14	Outdated KPI's are correct, relevant and up-to-date?					
15	Tools, equipment, documents are stored neatly and consistently throughout the work area?					
16	Tools, equipment and their maintenance records are consistently stored in the work area?					
17	Label products, folders, of tools consistently stored in the work area?					
	Sub Total:	0	0	0	0	0
5S - SUSTAIN ACTIVITY DESCRIPTIONS						
18	Is the 6S audit visible to all, up to date and shared with department personnel?					
19	Responsibility is given to team to participate in 6S activities?					
20	Time and resources are continually allocated to 6S activities?					
21	Has the team improved some that was already identified on the previous audit?					
	Sub Total:	0	0	0	0	0
6S - SAFETY ACTIVITY DESCRIPTIONS						
22	Are employees wearing suitable PPE (equipment) for their current work activity?					
23	Walkways, access to safety equipment is clearly identified and unobstructed?					
24	There are no electrical or safety hazards present in the area?					
25	Are essential equipment/tools provided for the current work activity?					
26	Tools, equipment, parts, WIP and PPE stored consistently and safely (appropriate height, location)?					
	Sub Total:	0	0	0	0	0
From this audit to the next time - Total: 02						

6S KPI Graph

No.	Improvement Identified (description)	Owner
1	Eye Wash station in the REM area missing a cover, and shower head in the passivation Line is dirty	Frank & Glen
2	Various items in back of the Production Polish partially block fire extinguisher	Frank & Glen
3	4-way outlet hanging down unsupported near the Zero Blaster	Frank & Glen
4	Set Down Induction machine is dirty, and the grit blaster has a hose leaking media on the floor	Frank & Glen

Savage Arms

Pull Systems

Kanban Card

Purchasing

Supplier

A basic pull replenishment system starts with the demand for parts or material. With the need for replenishment, a SIGNAL is sent back to Purchasing to supply more parts or material.

TPM (Total Productive Maintenance)

TPM requires the involvement of all people in the organization.

Maintenance

Operators

Management

Standard Work

Involve the people that do the work and help develop the **“Best Way”** to do the process as you know it today, then keep improving it.

Standard Work Chart				Rev: 01	Date: 11/08	
Part Description: Duquesne 4-B Process				Maker Type: 4-B Standard Work	Part: 01	
Part Description: Reverse				Maker By: Bob Anderson	Last Time: 57 seconds	
#	Work Element	Time (Seconds)			Cycle Time	Standard WIP In-process
		Hand	Machined	Lab		
Start of Shift Process Steps						
1	Verify the current part information in the machine	00				
2	Visually check tool life page for replacing tools	00				
3	Check hour and part code and enter your shift number on the OPA PA parameter page	05				
4	Perform visual check of finished parts in OP B basket	30				
5	Inspect all parts on your assigned machines (make adjustments as needed)	300				
Operator Process Steps						
6	Inspect 1 in every 10 parts on each assigned machine, acknowledging standard each time (make adjustments as needed)	00				
7	Complete the work order and sign the Traveler	30				
8	Provide the work order information and any scrap parts on the Production sheet	00				
9	Move completed cart to Hand File		300			
10	Select the next job that is staged in queue	45				
Operator OI/MS Steps						
11	After each tool change inspect the first part feature that the tool cuts	00				
12	Write backup tools in tool rack, replace worn-out tools and restore to tool rack after resetting machine	00				
13	Pull out the Day by Hour Chart for each assigned machine every 2 hours		45			
End of Shift Process Steps						
14	Log off/locker levels in each assigned machine	00				
15	Check log access in each assigned machine	00				
Totals		075	0	345	144	

Comments: Operators rotate machine assignments each week

Westfield Productivity Improvements

Value Added (EBITDA) per Associate

Lessons Learned

- Top Management needs to be totally committed
- Easy to fall back to old habits – “sustain the gains”
- Use Value Stream Mapping to chart the course
- Provide Lean training for all associates
- Create Lean Experts and Champions

Lessons Learned

- Select the right Lean tool for the right application
- Involve and show Respect for People
- Utilize Standard Work and keep on improving
- Go and See the process – Gemba Walks

Thank You!

A link to the full conference survey will be emailed to you Tuesday afternoon.
