CREDIIG DREAK-UI TOR D, IECH, IROURANNIE (2020-21 UNWalus)
--

CURRICULAR COMPONENTS	Credits
(A) Institute Core Courses (ICC)	
a) Basic Sciences (BSC)	16
<b>b</b> ) Engineering Sciences (ESC)	17
c) General Science (GSN)	04
Total	37
(B) Humanities, Communication and Management Elective Courses (HSSMEC)	12
(C) Department Core Courses (DCC) (including 3 credits of Minor Project)	39
(D) Departmental Elective Courses (DEC)	20
(E) Institute Open Elective Courses (GSE/ HSEC)	
a) Courses	24
<b>b</b> ) Project (Compulsory Major Project)- Inter disciplinary	06
Total	30
(F)Internship/ Course Work*	
(4 credits of Deptt. Elective + 4 credits of Open Elective+ 4 credits of Project	12
Work ) * Optional	
(G) Non Academic Courses (CCA)	10
Grand Total (For those who do not opt for Honours)	160
(H) Honours	16
Grand Total (For those who opt for degree with Honours)	160+16

**Note:** Minor Specialization will be given to a student who earns 16 credits from the basket of Open Elective courses offered by any one department (outside the parent department). Major Specialization will be given to a student who earns 16 credits in any one domain of Department Elective courses offered by parent department. To get Honours, the student will have to complete additional 16 credits of discipline open Electives.

# Semester wise UG Scheme to be implemented w.e.f. 2020-21 session

S.No.

1

SEMESTER-I		
S.No.		Credits
1	Orientation (including Introduction to	2
1	Discipline course-1 credit 14 hours)	Z
2	BSC-I (Mathematics)	4
3	BSC-II/ BSC-IV (Physics/ Chemistry)	4
4	GSC-I & GSC-II/ ESC-I	4
5	HSM-I/ ESC-II	3
6	ESC-III/ ESC-IV	3/2
	TOTAL	20/19

SEMESTER-II		
S.No.		Credits
1	BSC-III (Mathematics)	4
2	BSC-IV/ BSC-II (Chemistry/ Physics)	4
3	ESC-I/ GSC-I & GSC-II	4
4	ESC-II/ HSM-I	3
5	ESC-IV/ ESC-III	2/3
6	ESC-V/ ESC-VI	2
	TOTAL	19/20

SEMESTER-III		
S.No.		Credits
1	ESC-VII/ HSM-II	3
2	Deptt Core Courses (DCC)	12
3	OE-I	4
4	Industrial Tour	2
	TOTAL	21

SEMESTER-IV		
S.No.		Credits
1	HSM-II/ ESC-VII	3
2	Deptt Core Courses (DCC)	12
3	OE-II	4
4	Proficiency-I	2
	TOTAL	21

**SEMESTER-VI** 

Students opting for course work will do Deptt.

Elective (4 credits), Open Elective (4 credits)

Internship Training (Optional)

and Project Work (4 credits)

TOTAL

Credits

12

12

SEMESTER-V		
S.No.		Credits
1	DEC-I	4
2	Deptt Core Courses (DCC)	12
3	DEC-II	4
4	Minor Project	3
	TOTAL	23

SEMESTER-VII		
S.No.		Credits
1	HSM-III	3
2	DEC-III	4
3	DEC-IV	4
4	OE-III	4
5	OE-IV	4
6	Major Project-I	2
	TOTAL	21

SEMESTER-VIII		
S.No.		Credits
1	HSM-IV	3
2	DEC-V	4
3	OE-V	4
4	OE-VI	4
5	Discipline	2
6	Proficiency-II	2
7	Major Project-II	4
	TOTAL	23

ABBREVIATIONS		
Basic Science Course	BSC	
Engineering Science Course	ESC	
General Science Course	GSC	
Humanities, Social Sciences & Mgmt.	HSM

	Department Core Course	DCC
	Department Elective Course	DEC
	Open Elective Course	OE

## **Total Credits = 160 without Honours**

## **Total Credits = 160 + 16 with Honours**

**Note**: Minor Specialization will be given to a student who earns 16 credits from the basket of Open Elective courses offered by any one department (outside the parent department). Major Specialization will be given to a student who earns 16 credits in any one domain of Department Elective courses offered by parent department. To get Honours, the student will have to complete additional 16 credits of discipline Electives.

ESC-I	Introduction to Computing	ESC W	Introduction to Electronics & electrical
ESC II	Engineering Drawing with CAD	LSC-IV	Engineering
ESC-II	Software	ESC-V	Introduction to Manufacturing
ESC-III	Introduction to Mechatronics	ESC-IV	Strength of Materials
		ESC-VII	Artificial Intelligence

ESC-VII and HSM-II (in 3<sup>rd</sup> and 4<sup>th</sup> semesters) are common to all branches.

Course Name	:	Introduction to Aerospace Engineering
Course Code	:	
Credits	:	1
Lectures	:	14 hrs

# **Course Objectives:**

1	To introduce various aspects of aerospace engineering
2	To make the students aware about challenges and opportunities in the field of aerospace engineering.

# Lecture wise breakup

No. of Lectures

Total No. of Lectures – 14

	Aerospace: History and future	(2)
1	History of aviation and space technology, Scope of Aerospace Engineering , Aerospace Industry,	
	Current status and future of Aerospace Industry.	
	Aspects of Aerospace Engineering	(4)
2	Anatomy of Aircraft and spacecraft, Classification of aircrafts and space crafts, Brief introduction to:	
	Aircrafts instruments and systems, Aircraft structural components, Wind Tunnel: Utility	
	Basic understanding of flight	(2)
3	Airfoils, lift, drag, Thrust, weight and moments, force diagram. Different phases of flight, VTOL and	
	STOL.	
	Aerospace Propulsion	(2)
4	Introduction to different aerospace propulsion systems: Piston engine, Turboprop, Turbojet, Turbofan,	
	Ramjet, Scramjet, Pulsejet and Pulse detonation engine and Rocket propulsion.	
5	Satellites	(2)
	Different Launch Vehicles, Accomplishment of ISRO	
6	Aircraft Regulating Bodies	(2)
	Role of DGCA, AAI and MoCA, Introduction to airports.	

#### Suggested Books:

S.No.	Name of Books	Year of Publication
1	Introduction to Flight by John D. Anderson Jr.,7th Edition, Mc Graw Hill Pvt. Ltd.	2011
2	Aircraft Basic Science by Ralph D. Bent & James L. Mackinley.	1993
3	Flight without formulae by A.C. Kermode, 5th Edition, Pearson publication,	1989

1	The students will be able to realize interesting aspects of aerospace engineering
2	The students will be able to describe important basic concepts of aerospace engineering

Course Name	:	Introduction to Civil Engineering
Course Code	:	
Credits	:	1
LTP	:	100
		Total No. of Lectures: 14

## **Course Objectives:**

On completion of this course, the student shall be introduced to an overview of Civil Engineering profession and the ethical responsibilities of engineering practice.

Lectu	re wise breakup	No. o	f Lectures
1	Structural Engineering:		3
	Role of structural engineering in construction proje	cts, Introduction of construction materials.	
	General aspects of Structural Design.		
2	Hydraulics/Water Resources Engineering:		2
	Flow in Pipes/Channel, Reservoirs/Dam, Application	on of Water Resources Engineering.	
3	Geotechnical Engineering:		2
	Scope and Importance of Geotechnical Engineer	ring, field/practical illustration for civil	
	engineering applications e.g. subgrade, embankn	nent, foundations, dams, canals, tunnels,	
	landslide problem etc.		
4	Transportation Engineering:		3
	Opportunities and challenges in Transportation Infr	astructure, Construction Materials, Design	
	objectives, Highways, Rail Network, Airports, Mon	norails, sustainability.	
5	Environmental Engineering:		2
	Elements of water and wastewater Engineering, A	Air Pollution & Solid Waste Management	
	technologies.		
6	Geomatics Engineering:		2
	Importance of surveying in civil engineering project	ts, introduction of conventional techniques,	
	advancement in surveying techniques (GIS/RS/ Photos advancement)	otogrammetry/Drone)	

- Upon completion of this course the student shall be able to
  - 1. Make choice of career decisions
  - 2. Apply concepts of ethics in professional practice

Suggested Books:						
<b>S.</b>	S. Name of Books / Authors/ Publishers					
No.		<b>Publication</b> /				
		Reprint				
1.	Penn M. R. and Parker P. J. "Introduction to Infrastructure: An Introduction to Civil and Environmental Engineering" John Wiley & Sons	2011				
2.	Arora, M.K. and Badjatiya, R.C. "Geomatics Engg", Nem Chand and Bros., Roorkee	2009				
3.	Mckay W. B. "Building Construction" Orient Longman	2003				
4.	Schodek D. L. "Structures" Prentice Hall of India Pvt. Ltd.	2002				

Course Name	:	Introduction to Computer Science and Engineering
Course Code	:	
Credits	:	1
LTP	:	1 0 0
		Total No. of Lectures – 14

### **Course Objectives:**

The students should know about various disciplines in Computer Science and Engineering and are aware of emerging trends of Computer Science and Engineering.

Lecture wise breakup		
		Lectures
1	COMPUTER HARDWARE	2
	Basics of Number System, Evolution of Computer Hardware, Moore's Law.	
2	LOGIC DEVELOPMENT AND ALGORITHMS	2
	Various techniques to solve a problem, Ways to specify an algorithm.	
3	VARIOUS DISCIPLINES OF COMPUTER SCIENCE AND ENGINEERING	6
	Basics of Operating Systems, Artificial Intelligence, Computer Networks, Information	
	Security, Software Engineering, Computer Vision.	
4	Current and future trends and challenges in various fields of computing. Social, ethical	4
	and economic issues related to computing technology. Exploration of career and	
	professional development opportunities.	

At the	end of the course, students will have:
1	Students get knowledge about various fields of Computer Science and Engineering.

Sugg	ested books	Year of Publication/ Reprint
1	Computing Fundamentals, Peter Nortan, 4th Ed., Tata McRaw Hill	Latest edition
2	Computer Science Handbook, Allen B. Tucker, CRC Press	Latest edition

Course Name	:	Introduction to Electrical Engineering
Course Code		
Credits	:	1
LTP	:	1-0-0

## Course Objectives: At the end of this course, the student should be able to acquire basic knowledge of fundamentals of Electrical Engineering along with energy resources, generation, transmission, distribution and utilization of electrical energy.

Lecture wise breakup		Number of
		Lectures
1	OVERVIEW OF ELECTRICAL ENGINEERING	1
	General Introduction to the Field of Electrical Engineering and its Sub- disciplines,	
2	ENERGY RESOURCES	1
	Conventional and Non-conventional Energy Resources; Availability of Resources; Principle of	
	Energy Conversion and its Utilization; National and International Energy Trends; Global	
	Warming and Greenhouse Effects.	
3	GENERATION	2
	Generation of Electrical Power, Synchronous Generator; Generated Voltage Waveform,	
	Voltage and Frequency Level.	
4	TRANSMISSION	1
	Purpose of Transmitting Power, AC Transmission Voltage Levels; Transmission Lines,	
	Transmission Substation; HVDC Transmission.	
5	DISTRIBUTION	2
	Distribution Network and Substation; Single Line Diagram of Distribution Network; Overhead	
	Lines and Underground Cables; Grounding and Earthing.	
6	ELECTRICAL MACHINES	2
	Static and Rotating Machines, Classification, Working Principle and Applications.	
7	UTILIZATION	1
	Types of Load- Heating, Motor, Traction, Lighting and Fans; Load Characteristics; Consumer	
	Loads; Power Electronic Equipment.	
8	METERING	2
	Active and Reactive Power, Apparent Power, Voltage, Current, Power and Energy	
	Measurement.	
9	ELECTRICAL WIRING CONCEPTS	1
	Residential Wiring Diagram, Symbols of Switches, Fuse, Rheostat, SPDT, DPDT, Contacts,	
	Contactors, MCB, Safety and Protection.	
10	POWER QUALITY AND CONTROL	1
	Nature of Non- linear Loads; Problems due to Non-sinusoidal Current; Use of Electronics,	
	Microprocessor and Control Systems.	

#### Total No. of Lectures - 14

Course Outcomes: By the end of this course, the student will be able to:								
1	Understand the fundamentals of Electrical Engineering and become familiar with the field of Electrical							
	Engineering and its various sub-disciplines.							

Suggested Books:

Course Name	:	Introduction to Electronics & Communication Engineering
<b>Course Code</b>	:	
Credits	:	1
LTP	:	1-0-0

# **Course Objective:**

To familiarize the students with the evolution and basics of electronics and communication engineering. To introduce the various fields of electronics and communication engineering and their applications.

#### **Total Number of Lecture:14**

	Syllabus	Number of Lecture
1	Introduction to Semiconductor Devices, Analog/Digital Electronics, Embedded Systems, VLSI design, Communication Systems (Analog and Digital), Microwave Engineering and Antennas, Wireless Communication, Optical Communication, Satellite Communication, and applications.	14

Course Outcomes: By the end of the course the students will be able to			
1.	Describe the evolution of electronics and communication engineering.		
2.	Explain the various fields of electronics and communication engineering.		
3.	List the diverse applications of electronics and communication.		

# SuggestedBooks:

		Yearof
Sr. No.	Name of Book/Authors/Publisher	Publication/ Reprint
1	Electronics Devices & Circuit Theory, RL Boylestead& L Nashelsky (PHI)	2009
2	Digital principles & applications, Malvino Leach, TMH	2011
3	Electronic Communication Systems, R.Blake, Cengage Learning	2002
4	Embedded Systems, Raj Kamal, TMH.	
5	Microwave devices and Radar Engineering (3rd Edition) by Kulkarni, Umesh publications	2003
6	Electronic Communication Systems by G. Kennedy And B. Davis, Mc Graw Hill, 4th Edition	2006

Course Name	:	Introduction to Mechanical Engineering
Course Code	:	OR1101
Credits	:	1
LTP	:	1-0-0

# **Course Objectives:**

1	To familiarize student with the basics of Mechanical Engineering.
2	To introduce basic machine elements.
3	To familiarize with basic manufacturing processes.
4	To familiarize with the sources of energy and power generation.
5	To familiarize with the thermal systems like heat engines, refrigeration and air conditionings.

Lec	ture wise break up	No. of
		Lectures
1	<b>INTRODUCTION:</b> History, Role, and Scope of Mechanical Engineer.	(1)
2	MECHANICAL PROPERTIES OF MATERIALS :Materials classification, Ferrous/non	(1)
	ferrous, Alloys e.g. Brass, mechanical properties, stress-strain curves	
3	MACHINE ELEMENTS: Classification and types of Springs, Shaft, Bearing, Flywheel,	(1)
	Gears and their applications.	
4	METROLOGY AND MEASUREMENTS: Limits, Fits,, Tolerances, Gauges:their	(1)
	classifications and applications.	
5	BASICS OF MANUFACTURING PROCESSES: Machine Tools e.g. Lathe machine,	(2)
	work/tool holding devices vice, chuck, Classification and applications of machining,	
	Welding, Casting, and Forming.	
6	BASICS OF POWER PLANT ENGINEERING: Thermal /Nuclear/ Hydraulics their main	(2)
	Parts with schematic diagram. Power generation in India	
7	<b>RENEWABLE ENERGY SOURCES</b> : Solar Energy and its application in deferent fields	(2)
	,Wind, Bio Mass, Geothermal and Ocean energy	
8	REFRIGERATION & AIR-CONDITIONING SYSTEMS: Working Of Window ,Split	(1)
	Air Conditioning Systems, Working Of Domestic Refrigerators	
9	INTERNAL COMBUSTION ENGINES: Basics of two strokes, four strokes, Petrol &	(2)
	Diesel Engines. Their salient features, differences between two.	
10	LATEST DEVELOPMENTS IN MECHANICAL ENGINEERING: Micro-fluidics,	(1)
	Electric vehicle, Hydrogen energy	

**Text Book:** 

1 An Introduction to Mechanical Engineering by Jonathan Wickert and Kemper Lewis, 3<sup>rd</sup> edition, Cengage Learning

## **Reference Books:**

1	Materials and Processes in Manufacturing and Management-a new perspective, Mc Graw Hil, Inc. 1994.
2	Power Plant Engineering by P. K. Nag. Pub: Tata Mc Graw Hill
3	Applied Thermodynamics by R. Yadav

1	Student will be able to clear the basic concept of Mechanical Engineering.
2	Student will be able to realize the importance of thermal systems and manufacturing.
3	Student will be able to come up with the innovative conceptual idea about sources of energy.
4	Student will get at glance knowledge regarding overall aspects and trends in mechanical engineering.

Course Name	:	Introduction to Metallurgical & Materials Engineering
Course Code	:	
Credits	:	1
LTP	:	1-0-0

# **Course Objectives:**

At the end of this course, student will be able to:

- 1. Understand and classify the sub branches and domains of Materials & Metallurgical Engineering stream.
- 2. The possible opportunities in the domains of Materials & Metallurgical Engineering.
- 3. Understand all basic principles involved in the theory of Elasticity and Plasticity.

Total No. of Lectures–14				
Lecture wise breakup				
1	<b>History and Evolution</b> Definition, concept, scope and nature of materials and metallurgy industries associated to metallurgical engineering and allied fields, opportunities in metallurgical and materials engineering	2		
2	<b>Basics of Material Development</b> Principles of production of ferrous and non-ferrous metals; overview of alloy making and Units involved in such process.	3		
3	<b>Overview of Materials Processing Technologies</b> Principle and overview of heat treatment industry, metal casting units, material joining technology etc.	3		
4	<b>Basics of Materials Selection</b> Basics and principles involved in material selection for special applications like high temperature exposure, nuclear reactor materials ;corrosion resistant materials etc	3		
5	<b>Special and New Materials</b> Introduction to newer materials such as smart materials, biomaterials and their applications.	3		

# **Course Outcomes:**

Student will be able to:

1. The student will be able to understand and create the areas and domains in Metallurgical & Materials Engineering on the basis of his/her interest and opportunity available in present industrial scenario.

2. The student will be able to understand the basic principles of selection of materials and challenges to entrepreneurs in metallurgy

3	Fundamentals of Materials Science and Engineering/WDCallisterJr./ JohnWileyandsons/ 9 <sup>th</sup> Edition.	2014			
4.	Principle of Blas Furnace (Iron making)/ AK Biswas/ Cootha	2003			

Course Name	:	Introduction to Production and Industrial Engineering
Course Code	:	
Credits	:	1-0-0

# Total no. of lectures: 14

# **Course Objectives:**

To acquaint the students with evolution, scope and basics of Production and Industrial Engineering

	Syllabus	Hrs
(1)	HISTORY AND EVOLUTION: Definition, concept and scope of Production and Industrial Engineering, evolution of Production and Industrial Engineering.	2
(2)	Concept of: Digital and Smart Manufacturing, Industrial Internet of things and basic concepts of Industry 4.0	2
(3)	Concept of manufacturing systems, design of manufacturing systems, operations and management of manufacturing systems.	2
(4)	INTRODUCTION TO PRODUCTION ENGINEERING: Principles of good product design, tolerances and product life cycle, Machining, Metal casting, Metal forming, Joining and welding processes	2
(5)	INTRODUCTION TO INDUSTRIAL ENGINEERING: Product economy and production system, Concept of quality and cost, Logistics, Production planning and inventory control, Operations research, Quality control.	2
(6)	INTELLECTUALPROPERTY RIGHTS: Concept, scope and challenges	2
(7)	FUTURE TRENDS IN PRODUCTION AND INDUSTRIAL ENGINEERING: New developments, Applications and Case studies.	2

Cour	Course Outcomes:					
1	Students will be able to relate the evolution of Production & Industrial Engineering to societal and					
	other needs.					
2	Students will be able to identify the basic processes and applications of Production & Industrial					
	Engineering.

Course Name	:	Calculus and Ordinary Differential Equations
Course Code	:	MA1101 (Common to all branches)
Credits	:	4
LTP	:	3-1-0
Total No. of Lectures	:	42

**Course Objectives:** At the end of the semester, the students should be able to

1	understand the behavior of infinite series and their use.
2	learn the concepts related to differential calculus of functions of several variables and their applications.
3	learn the concept and methods of evaluating multiple integrals and their applications to various problems.
4	learn the methods to solve ordinary differential equations of various types.

	Lecture wise breakup	No. of Lectures
1	<b>INFINITE SERIES</b> Infinite series and convergence, alternating series, power series and convergence. Taylor's and Maclaurin's Series. (Scope as in Chapter 8, Sections 8.1, 8.3 – 8.9 of Text Book1).	8
2	<b>DIFFERENTIAL CALCULUS</b> Limit, Continuity and Partial Derivatives; Euler's Theoem for Homogeneous functions; Differentiability, Linearization and Differentials; Chain rule; Extreme values and Saddle Points; Lagrange multipliers; Taylor's Formula. (Scope as in Chapter 12, Sections 12.1 – 12.6, 12.8 – 12.10 of Text Book 1).	12
3	<b>INTEGRAL CALCULUS</b> Cylinders and Quadric surfaces, Double integrals in Rectangular and Polar form, Triple integrals in Rectangular, Cylindrical and Spherical Coordinates, Substitutions in Multiple integrals. Applications to practical problems. (Scope as in Chapter10, Sections10.6 and 10.7 and Chapter 13, Sections 13.1, 13.3, 13.4,13.6 and 13.7 of Text Book 1).	10
4	ORDINARY DIFFERENTIAL EQUATIONS First order exact differential equations, Integrating factor, Orthogonal trajectories, Second and Higher order Linear Differential Equations with constant coefficients, Differential Operators, Methods of Variation of Parameters and Undetermined Coefficients, Euler Cauchy Equation, Wronskian. (Scope as in Chapter 1, Section 1.5, 1.8 Chapter 2, 2.1-2.4, 2.6, 2.9-2.10, 2.13- 2.15 of Text Book 2).	12

# **Course Outcomes:**

At the end of the semester, the students are able to

1	test the behavior of infinite series.
2	Apply the concepts of differential calculus of functions of several variables.
3	evaluate multiple integrals and apply them to practical problems.
4	solve ordinary differential equations of various types

## **Text Books:**

1	Calculus and Analytic Geometry, Thomas and Finney, 9th edition, Pearson Education Asia.	2006
2	Advanced Engineering Mathematics, Kreyszig, 8 <sup>th</sup> edition, John Wiley and Sons.	2005

## **Reference Books:**

1	Differential Equations, Frank Ayers, SI edition, Mc Graw Hill.	1972
2	Advanced Engineering Mathematics, Wylie and Barrett, 6th edition, Mc Graw Hill.	2003

Course Name		Linear Algebra, Vector Calculus and Partial Differential Equations
Course Code	:	MA1201 (For Aero, ECE, Mech and student-specific for Civil)
Credits	:	4
LTP	:	3-1-0
Total No. of Lectures	:	42

# **Course Objectives:**

At the end of the semester, the students should be able to

1	learn the various concepts associated with real vector spaces and theory of matrices
2	learn the various concepts of vector calculus and their applications to problems.
3	formulate and solve linear and nonlinear partial differential equations and apply to engineering problems.

S.No	Lecture wise breakup	No. of Lectures
1	<b>ALGEBRA</b> Vector spaces over reals, Linear dependence, Basis, Dimension, Co-ordinates with respect to a basis, Change of basis, Subspace, Linear transformation $\mathbb{R}^n \to \mathbb{R}^m$ , Range space and Rank, Null space and Nullity, Rank and Nullity relation, Matrix representation of a linear transformation, Similar matrices, Invertible linear transformation, Eigenvalues and eigenvectors, Cayley Hamilton theorem, Diagonalization of a matrix.	16
2	<b>VECTOR CALCULUS</b> Gradient, Divergence and Curl – their physical interpretation, Line, Surface and Volume integrals, Green's theorem in the plane, Stoke's theorem, Divergence theorem, Applications to Science and Engineering.	14
3	<b>PARTIAL DIFFERENTIAL EQUATIONS</b> Formation and solution of first order partial differential equations, Linear equations of higher order with constant coefficients, Applications to Engineering problems.	12

## **Course Outcomes:**

At the end of the semester, the students are able to

1	solve the various problems related to real vector spaces and theory of matrices
2	apply various concepts of vector calculus to problems.
3	formulate and solve linear and nonlinear partial differential equations and apply to engineering problems.

# **Text Books:**

1	Introductory Linear Algebra with Applications, Kolman, B. and Hill, D.R., 7 <sup>th</sup> editiom, Pearson Education	2001
2	E. Kreyszig, Advanced Engineering Mathematics, Eighth Edition, John Wiley.	2005

## **Reference Books:**

1	Elements of Partial differential equations, Sneddon, Mc Graw Hill.	1957
2	Advanced Engineering Mathematics, Wylie and Barrett, 6th edition, Mc Graw Hill.	2003

Course Name		Probability and Statistics
Course Code	:	MA1301 (For CSE, Electrical, Metta, Prod and student-specific for Civil)
Credits	:	4
LTP	:	3-1-0
Total No. of Lectures	:	42

**Course Objectives:** At the end of the semester, the students should be able to

1	understand the concepts of random variable and probability distribution.
2	learn the concepts of some theoretical probability distributions .
3	understand the concept of sampling distribution and be able to construct and interpret confidence interval estimates for the mean , proportion , difference of mean and proportion
4	learn to use various tests of hypotheses

	Lecture wise breakup	No. of Lectures
1	<b>RANDOM VARIABLES</b> Random variables, Discrete, Continuous and Joint Probability distributions, Marginal and Conditional distributions, Independent random variables, Expectation, Variance and Covariance, Means and variances of linear combinations of random variables, Chebyshev's inequality	10
2	<b>PROBABILITY DISTRIBUTIONS</b> Binomial, Poisson, Uniform and Normal distributions, Normal and Poisson approximations to Binomial, Moments, Moment generating function.	10
3	<b>SAMPLING DISTRIBUTIONS</b> Population, Sample, Sampling distributions, Central limit theorem, Distribution of sample mean, Difference of means, Proportions and difference of proportions, Chi-square distribution, Student's t- distribution.	7
4	<b>ESTIMATION</b> Estimation of parameters, Point estimate, Confidence interval for mean, difference of means and proportions.	6
5	<b>TESTS OF HYPOTHESES</b> Hypothesis, Test statistic, Critical region, Significance level, Single Sample and Two Samples Tests for mean and proportion.	9

# **Course Outcomes:**

At the end of the semester, the students are able to

1	understand the concepts of random variable and probability distribution.
2	apply the concepts of some theoretical probability distributions .
3	use the concept of sampling distribution and apply tests of significance to practical problems of engineering

4	apply various tests of hypotheses

# **Course Objectives:**

1. To inculcate the application of mechanics concepts in engineering.

2. To familiarize students with statics, kinematics and kinetics of rigid body.

3. To familiarize the students withlasers, optical fibers, ultrasonics and their applications.

4. To make the students able to understand the basic concepts of nanotechnology and its applications.

Total No. of Lectures – 42

Lecture wise breakup		
		Lectures
1	<b>STATICS:</b> Free body diagrams, analysis of system of forces, Equation of equilibrium in space and its applications, Center of gravity, Centroid, mass, area and Polar moment of inertia of simple and compound bodies	6
2	<b>DYNAMICS:</b> Kinematics of a Particle, Introduction, Motion of a projectile. Kinetics of a particle: Force and acceleration, Work and energy, Impulse and momentum.	4
3	<b>PLANAR KINEMATICS OF A RIGID BODY:</b> Rigid-Body motion, Translation, Rotation about a fixed axis, Absolutegeneral Plane Motion analysis. Relative-MotionAnalysis: Velocity, Instantaneous center of zero velocity, Acceleration, Relative-Motion analysis using Rotating axes.	4
4	<b>PLANAR KINETICS OF A RIGID BODY:</b> Momentof Inertia. Planar Kinetic equations of motion. Equations of motion: Translation, Rotation about a fixed axisand General Plane motion. Kinetic Energy, Work of a Force, Work of a Couple, Principle of Work and Energy, Conservation of Energy, Linear and Angular Momentum, Principle of Impulse and Momentum, Conservation of Momentum, Eccentric Impact.	12
5	LASERS, OPTICAL FIBRES ANDULTRASONICS: Basics of Interference, Diffraction and Polarization, Laser and its characteristics, He-Ne laser, ruby laser, semiconductor lasers, Applications of Lasers, Optical fibres; Numerical aperture, Classification of optical fibres, fibre Losses, fibre manufacturing, Applications of optical fibres. Production of ultrasonics, detection and uses of ultrasonic, reverberation.	12
6	NANOTECHNOLOGY: Introduction, Length Scale, Size dependence, Synthesis of Nanoparticles: Mechanical Method,Sol-gel Technique, Physical Vapour Deposition, Chemical Vapour Deposition, Applications of Nanotechnology	4

Lis	t of Experiments	No.of
1		
L	Familiarization of students with basic instruments vernier Calipers, Screw Gauge and Spectrometer.	1
2	To find the wavelength of sodium light using Fresnel's biprism.	1
2	(i) To determine the wavelength of He-Ne laser using transmissiongrating.	1
3	(ii) To determine the slit width using the diffraction pattern.	
4	To determine the wave length of sodium light by Newton's rings method.	1
5	To determine the wave length of sodium light using a diffraction grating.	1
6	To find the specific rotation of sugar solution using a Bi-quartz Polarimeter.	
7	(i)To determine the angle of acceptance and numerical aperture of given fibre optical cable.	1
	(ii) To determine the losses in optical fibre in dB due to micro bending of fibre.	
8	To determine the Moment of Inertia of a Flywheel.	1
9	To determine the range of projectile as a function of angle of inclination and initial velocity.	1
10	To determine the velocity of ultrasonic waves in a given liquid.	1
11	To determine the restoring force per unit extension of a spiral spring by a statistical and dynamic	1
	method and also to determine the mass of the spring.	
12	To measure the centripetal force, $F_c$ , and compare to $F_c = mv^2/r = m\omega^2 r$ .	1
13	To study conservation of energy and momentum in collision.	1

Cours	e Outcomes: By the end of the course
1	Students will be able to understand and applythe concepts of mechanics, types of motions and characteristics
	of a rigid body.
2	Students will develop capability to tackle the numerical problems in general and in the various areas covered
	in the course.
3	Students will learn about lasers and fibre optics, which have important applications for societal needs.
3

## **Total No. of Lectures: 14**

**Course Objectives**: This course aims to attract the attention of students towards understanding the chemistry of pollutants, their analysis and disposal along with introduction to green chemistry for Environment friendly processes and products.

	Contents	Lectures
1.	Air Pollution: Introduction, Air pollutants, Photochemical reactions in the atmosphere,	3
	Photochemical smog, Health effects and the usual ways to control air pollution	5
2.	Water Pollution: Types of Pollution, Contaminants and their sources, measurements and its	3
	control	5
3.	Soil Pollution: Inorganic and organic contaminants, Pesticides and herbicides, health effects	2
	and remedial measures, metal toxicology	3
4.	Green chemistry for clean Technology: Goals, Principles and applications	2
5.	E-waste Management: Introduction, Environmental impact/ health effects of e-waste	2
	exposure, Methods to dispose e-waste	3

#### **Course Outcomes**:

- 1. Students will be able to identify the source of contaminants in Water, Soil and Air and develop the strategies to minimize the levels of pollution
- 2. Students will understand the applications of green chemistry in mitigating the environmental pollution
- 3. Hands on training through lab experiments for chemical analysis of various pollutants.

1	INTRODUCTION TO PROGRAMMING	<u>Lectures</u>
-	Evolution of languages: Machine languages. Assembly languages. High-level languages.	Ũ
	Software requirements for programming: System softwares like operating system, compiler.	
	linker, loader; Application softwares like editor. Flowcharts. Algorithm, specification of	
	algorithm.	
	Industrial uses of programming in various domains	
2	DATA TYPES and OPERATORS AND EXPRESSION	7
	Storing integers, numbers with decimals, characters and strings, typecasting.	
	User input and output, use of command line arguments	
	Operators: arithmetic operators, relational operators, logical operators, bitwise operators,	
	miscellaneous operators. Expressions and their evaluation. Precedence and associativity rules.	
3	ITERABLE CONTAINERS and STATEMENTS	7
	List, set, tuple and dictionaries; range function; difference between various iterable containers	
	Decision making statements: if, if-else, nested if and if-else. Control statements: for & while	
	loops, nested loops; Role of statements like break, continue	
4	FUNCTIONS and CLASSES	8
	Advantage of modularizing program into functions, function definition and functioninvocation.	
	Function arguments: default, keyword and positional arguments.	
	Scope and lifetime of a variable. Recurrence relations and Recursion	
	Advantage of using classes, defining class data members & functions and accessing using objects.	
	Constructors and destructors in a class, parameterized constructors	
5	GUI design	5
	Introduction to tkinter library, use of TK &mainloop methods, use of widgets like Button,	
	Canvas, Checkbutton, Entry, Frame, MenuButton, Listbox, Menu, Scrollbar, Text, Message,	
	Pack, Grid, place etc. for GUI design	
6	SORTING AND SEARCHING	9
	Searching: Linear search, binary search and hash search.	
	Sorting: Insertion sort, selection sort, bubble sort, quick sort, merge sort, heap sort, and Bucket	
	sort.	
	Time and space complexity of algorithms, comparing algorithms	
7	Problem Solving	3
1	Real-world programming problems	

Total no. of turns: 14

List of	List of Experiments:		
1	Implement programs to input/output various data types		
2	Implement programs to use command line arguments		
3	Implement programs making use of various operators		
4	Implement programs making use of conditional statements and loops		
5	Implement programs making use of iterable containers		
6	Implement programs making use of functions and recursion		
7	Implement programs performing file operations		

8	Implement various searching and sorting algorithms
9	Project work including GUI design using tkinter

Cour	Course Outcomes: At the end of the course, students will be able to:		
1	Develop understanding of the fundamental concepts essential for programming.		
2	Make efficient use of iterables, function and classes to programming problems		
3	Develop simple GUI applications		
4	Learn to compare algorithms and improve efficiency of algorithms

4	Projection of so	blids.	2		
5	Projection of S	ectioning of solids.	2		
6	Isometric and c	orthographic views.	2		
7	Generating dra	wings of 3D-parts.	2		
<b>Course Outcomes:</b> At the end of this course, the students will be able to:					

1	Understand the basic concepts of Engineering Graphics.
2	Visualize the actual objects and convert them in to readable drawings.
3	Understand the drawing standards, conventions and symbols that are in common usage.
4	Draw the common Engineering drawings using available Drafting softwares.
5	Come up with innovative conceptual ideas by using Drafting softwares.

Course Name	:	Introduction to Mechatronics
Course Code		ES 1301 (Common to all branches)
Credits	:	3
LTP	:	2-0-2

Course Objectives: The objective of the course content is to: CO1: Impart knowledge and information about product design. CO2: Development and control of intelligent systems for all aspects of life.

Lecture wise breakup		No. of
		Lectures
1	<b>Understanding Mechatronics</b> Mechatronics System, Evolution, Definitions of Mechatronics, Key Elements of Mechatronics, Mechatronics for all Civil, Metallurgical, Aerospace, Chemical, Architecture, Medical, Robotics, Defense, Agriculture, etc., Role of Mechanical, Electrical, Electronics, Computer Engineers in Intelligent Product and Process Design, Development and Control, Bio-mechatronics.	02
2	Systems and Machines : System, Classification of System, Mechanistic System Classification Based on Input Energy, Mathematical Model and Function, Machine, Parts of Machine, Concepts of Machine, Classification of Machines based on Function and Size.	02
	System Intelligence: Properties of Intelligent System, System Intelligence Levels, Human Intelligence System, Future Generation System Intelligence Level, Expressing System Intelligence.	02
3	Sensor and Transducer : Sensors in Mechatronics System, Difference between Sensors and Transducers, Classification of Sensors, Based on Sensor Output Signal, Sensor Input Physical Parameters, Sensor Accuracy (Smart/Intelligent Sensor), Performance Terminology, Static Characteristics, Dynamic Characteristics.	03
4	<b>Signal Conditioning Devices :</b> Signal Conditioning Processes, Application of Signal Conditioning Devices in Mechatronics based on Their Characteristics such as Diode, Transistor, SCR, DIAC, TRIAC, Op-Amps, Signal Filtering, Circuit Protection, Signal Conversion, ADC and DAC, Logic Gates, Flip-Flops, Register, Counters.	05
5	Actuators: Actuators, Types of Actuators, Mechanical Actuation System (i.e. Linear-rotary, Rotary-linear Mechanism, Gear, Bearing, Pulleyetc.). Electrical Actuation System (DC, AC, Stepper Motors), Pneumatic and Hydraulic Actuation System.	05
6	<b>Controllers :</b> Microprocessor, Microcontroller, PLC Controller& Their Architectures, Principles and Working Software Programs (Assembly/High Level),Interfacing Aspects, Application Examples.	05
7	<b>Robotics and Automation:</b> Evolution of Robots, Definitions, Types of Motions, Function, Governing Laws, Classification, Features and Components of Robots, System Automation.	04
	Total No. of Lectures	28

	LIST OF EXPERIMENTS				
	Number of Turns				
1	Experiment on Sensors & Transducers (Mechatronics Lab)				
(i)	To study the characteristics of LVDT using linear displacement trainer Kit & compare with ideal characteristics.	01			
(ii)	To measure the strain of the metal strip using strain gauge trainer kit & compare with ideal characteristics.	01			
(iii)	To measure the angular displacement of resistive & capacitive transducer using angular displacement trainer kit & compare with ideal characteristics.	01			
(iv)	To obtain the characteristics of RTD, Thermistor, thermocouple with hot and cold junction thermal trainer kit & compare with ideal characteristics.	01			
2.	Experiments on Signal Conditioning.				
(a)	Experiments on Analog Devices				

(i)	PN Junction Diode	01
( <b>ii</b> )	Zener Diode	01
(iii)	Half wave rectifier	01
(iv)	Full wave rectifier	01
(b)	Experiments on Digital devices	
(i)	Logic Gates (AND, OR, NAND, NOR etc)	01
( <b>ii</b> )	Flip Flop (RS Flip Flop), D Flip Flop.	01
3	Experiments on Controller	01
(i)	Study of microprocessors, microcontroller, programmable logic controller (PLC)	
( <b>ii</b> )	PLC interfacing of I/O and I/O addressing.	01
(iii)	To perform any basic sequence programming using PLC.	01
4.	Experiments on Actuators	01
(i)	Study of mechanical, electrical, hydraulic/pneumatic actuators.	

# **Course Outcomes:**

By the end of this course, the student will be able: CO1: To understand components of mechatronic system, CO2: To design product and systems theoretically as well as practically with intelligence.

# Suggested Books:

Course Name	:	Introduction To Electronics & Electrical Engineering
-------------	---	--
Course Code	:	ES1401 (Common to all branches)
Credits	:	2
LTP	:	2-0-0

**Course Objective:** 

To introduce to the students, the fundamental concepts of electronic devices, circuits and electrical systems for engineering applications.

**Total Number of Lecture:28** 

Lecture wise breakup		Number of
	-	Lecture
1	Semiconductor Device sand applications: Familiarizations with active and passive	
	components Physics of p-n junction diode, BJT, JFET and MOSFET, diode as Rectifier,	7
	clippers and clampers, Transistor as an amplifier, Introduction to Audio amplifiers,	
	Functional operation of OpAmp, concept of Oscillators, filters and their types	
2	Digital Electronics: Introduction to logic gates, combinational circuits: adder, subtractor,	
	multiplexer, demultiplexer, sequential circuit: flipflops, counters, registers, Analog to	5
	digital conversion, Digital to analog conversion and applications	
3	Communication Systems: Various frequency bands used for communication, Block	3
	diagram of Analog and Digital communication, need of modulation, Analog modulation	
	techniques (Amplitude and frequency), Digital modulation techniques (ASK, FSK, PSK,)	
4	Fundamentals of Electrical Engineering: Introduction to circuit laws, Network	
	theorems, Amplitude, Phase, Phase difference, RMS value and Average value of a AC	8
	signal, Active and Reactive Power, single phase and 3 phase systems, star delta connection,	
	construction, working principle and speed control of AC and DC machines, Transformer:	
	construction, working principle and applications	
5	Measurements: Principle of measurement, voltage, current, power and energy	5
	measurement, analog and digital measurement system	

**Course Outcomes:** By the end of the course the students will be able to

- 1. Express the understanding of semiconductor devices (p-n Diode, BJT, MOSFET etc), and their applications.
- 2. Describe the functional operation of various analog and digital electronic circuits.
- 3. Solve basic electronic circuits using circuit laws and network theorems.
- 4. Describe the basic principle and working of fundamental electrical systems, ac dc motors and transformer etc.
- 5. Explain the basic principle of measuring electrical quantity such as voltage, current, power and energy.

Course Name	:	Introduction to Manufacturing
Course Code	••	ES1501 (For Aero, CSE, ECE and Electrical)
Credits	:	2
LTP	:	2-0-0

### Total no. of lectures: 28

# Course Objectives: To equip the students with basic understanding and learning of its concepts for conventional and advanced manufacturing processes along-with their applications.

	Syllabus	Hrs
(1)	Concept of Manufacturability, Classification of Manufacturing processes -Introduction to Primary Manufacturing processes: Types and applications -Introduction to Secondaryand Tertiary Manufacturing processes: Types and applications.	6
(2)	Concept of Smart, Digital and Sustainable manufacturing processes with applications. Concepts of Industry 4.0 its relevance and Industrial Internet of Things (IIOT).	6
(3)	Introduction to Advanced Manufacturing practices: Classification, Principles and Applications of Electric Discharge Machining (EDM), Laser Beam Machining (LBM), Abrasive Flow Machining (AFM), Chemical and Electro Chemical Machining (ECM), Ultrasonic Machining and Welding etc.	6
(4)	<ul> <li>Computer Integrated Manufacturing: Concept of CAD/ CAM.</li> <li>a) Concept of Additive and Subtractive manufacturing processes: Rapid Prototyping &amp; Rapid Manufacturing, Principles, Major technologies used and its applications.</li> <li>b) CNC machines, concepts, uses and applications.</li> <li>c) Industrial Robots, types and applications.</li> </ul>	6
(5)	Case studies and practical examples on: a) Manufacturing of small precision parts. b) Manufacturing of ICs & PCB. c) Manufacturing of keyboards and hardware.	4

Course Outcomes:			
1	Students would be able to classify and choose manufacturing processes for typical applications.		
2	Understand the process, steps and applications of Rapid Prototyping		
3	Understand the principles and applications of CNC and Robots in manufacturing.

Course Name	Strength of Materials	
Course Code	ES1601 (For Civil, Mechanical, Metta and Production)	
Credits	2	
LTP	2-0-0	
<b>Total No. Lectures</b>	28	

### **Course Objectives:**

At the end of this course, the student should be able to understand the basic concept regarding the strength of material. The course will prepare the students to apply these concepts to engineering and applied sciences problems.

Lecture wise breakup		No. of
		Lectures
1	<b>INTRODUCTION:</b> Equations of static equilibrium, Concept of various forces/loads, stresses and strains developed due to these forces/loads, Uniaxial tensile test, Stress-strain diagrams for various types of ferrous and non-ferrous materials, isotropic and anisotropic materials, Compression test, impact test, fatigue test, hardness test, torsion and bending test as per ASTM standards	3
2	<b>SIMPLE STRESS &amp; STRAIN:</b> Hooke's law, stress and elongation produced in various types of bars due to its own weight and applied axial force, Poisson's ratio, relationship between elastic constants, stresses and elongationproduced in simple & composite bars due to axial, thermal and combined loading.	5
3	<b>2-D STATE OF STRESS ANALYSIS:</b> Generalized 2-D state of stress accompanied by shear stress, stresses on an arbitrary plane under this state of stress, sign conventions, complementary shear stress, principal stresses and principal planes, Different stresses determination through Mohr's stress circle approach in 2-D state of stress.	5
4	SHEAR FORCE AND BENDING MOMENT IN BEAMS: Classification of beams, supports and loads, Shear force (SF) &Bending moment (BM) in beams, sign conventions, Relation between rate of loading (w) with SFand BM. SF and BM diagrams of cantilevers, simply sported beams with or without overhang under different types of loading e.g. concentrate loads, uniformly distributed load, uniformly varying load, moment or its combinations, the point of contra-flexure	5
5	<b>BENDING &amp; SHEAR STRESSES IN BEAMS</b> : Theory of pure bending, position of neutral axis, Bending equation, practical application of bending equation, review of moment of area concepts, variation of bending stress in various cross-sectional beams, shear stresses in beams, variation of shear stresses for different cross-sectional beams	5
6	<b>TORSION OF CIRCULAR SHAFTS:</b> Torsional equation of circular shafts, shear stress distribution, torsional rigidity, power transmitted by the shaft, comparisons of hollow & solid circular shafts, analysis of shafts in series and parallel mode	5

Cours	<b>Course Outcomes:</b> By the end of this course, the student will be able to:		
1	Understand the concept of stresses & strains, various types of materials, its properties & testing		
1	processes as per ASTM standards		
Understand elastic constants and also be able to determine stresses & elongations in			
4	composite bars under various types of loads		
2	Will able to determine stresses on an arbitrary plane for a generalized 2-D state of stress accompanied		
3	by shear stress through analytical and graphical methods		
4	Understand and be able draw shear force and bending moment diagrams for different types of beams		
+	under various types of loading		
5	Will able to understand bending and shear stress equations and its application in determination of		
5	bending & shear stresses in different cross-sectional beams at any point across its length		
(	Understand the torsional stresses for solid, hollow and composite circular shafts and its importance in		
U	power transmission.

**Departmental Core Courses** 

Course Name	:	ELEMENTS OF MANUFACTURING PROCESSES
<b>Course Code</b>	:	ME1031
Credits	:	3
LTP	:	2-0-2

### **Course Objectives:**

1. To familiarize the students with the basic tools and equipment's used in manufacturing.

- 2. To introduce the practical knowledge on different aspects of manufacturing processes.
- 3. To familiarize with basic manufacturing processes, techniques, use of machine tool etc.
- 4. To familiarize with the production of basic raw materials and secondary processes like joining, forming, and assembly.

	1 otal No. of 1	Lectures – 28
Lectu	re wise breakup	No. of
		Lectures
1	<b>MANUFACTURING</b> : Definition, Classification, Concept of product design and development, Plant and shop layout, Manufacturing activities inside and outside the factory, Industrial safety, Selection of raw materials, Storing, Process planning.	4
2	<b>FOUNDRY:</b> <i>Raw materials</i> : fuels, fluxes, refractory and related materials, patterns, mould, core; <i>Furnaces</i> : Cupola, induction and resistance heating furnaces, core furnace, open hearth furnace, pit furnace, Sand casting, Mechanics of solidifications; <i>Design:</i> Gating system, runner and riser; Pouring time calculation, Degassing, Fettling; <i>Special Castings</i> : Centrifugal, carbon dioxide, plaster, shell and permanent moulding, precision casting, investment casting, die casting, Continuous casting; <i>Casting of composites:</i> Casting Al/SiC, Al/ZrO2, Al/Al2O3 and hybrid MMCs, properties and applications. <i>Casting defects:</i> Causes and their remedial actions.	8
3	<b>METAL FORMING</b> : Classification, hot and cold working processes, Types: coining, embossing, punching, blanking, rolling, forging, fullering, edging extrusion, drawing, <i>Special forming processes:</i> rotary swaging, ring rolling, gear forming, tandem rolling, thread rolling, bearing cup, spline shaft rolling, electro, hydraulic, magneto-electro and hybrid forming; <i>Forming defects</i> : Causes and remedial actions.	5
4	<b>WELDING:</b> Definition, classification, mechanism of welding, weldability. <i>Arc</i> <i>welding</i> : principle, types, Carbon, submerged, electro-slag, MIG, TIG and plasma arc welding. <i>Electrodes</i> : Types, classification and codification, selection and specific applications. <i>Resistance welding</i> : Principle, types, Spot-welding machines. <i>Solid state welding</i> : Cold, diffusion, ultrasonic, explosive, friction and forge welding. <i>Thermochemical welding</i> : Principle, types, applications. <i>Gas welding</i> : Types, different zone and temperature of flames, applications. Oxy-flame cutting: Principle, types, applications. <i>Brazing and soldering</i> : Principle, types, materials, application in macro and micro domain, <i>Welding defects</i> : Causes and remedial actions.	7
5	<b>HEAT TREATMENT:</b> Definition, classification, annealing, normalizing, hardening and tempering; Iron-carbon and TTT diagram, <i>Surface hardening processes</i> : carburizing, nitiriding, cyaniding and flame hardening, heat treatment processes for non-ferrous metals.	4

List	of Experiments:
1	Carpentry section: (i) half lap T & L-joint, (ii) pattern of hexagonal nut.
2	Fitting section: (i) leveling & surface marking, (ii) square hole making.
3	Foundry section: (i) mould making, (ii) casting hexagonal nut.
4	Smithy section: (i) round bar to cube, (ii) round bar to V-block.

5	Welding section: (i) arc welding: V, L,T joints, (ii) spot welding on sheet metal.
6	Machine section: (i) turning & tapering, (ii) thread cutting.
7	Assembly and electrical basic connection: (i) study automobile engine, (ii) wiring & electrical
	connection.
8	Sheet metal & Electroplating: (i) bending & joining, (ii) buffing and electroplating on sheet metal

Cou	rse Outcomes: Students will be able to
1	Clear the basic concepts of machine tools, tools and other equipment's.
2	Realize the important and their actual applications in manufacturing
3	Come up with innovative conceptual idea about manufacturing processes and their industrial
	applications

Course Name	:	ELEMENTS OF THERMODYNAMICS
Course Code	••	ME1032
Credits	••	3
LTP	:	3-0-0

Cours	Course Objectives:		
1	Understand the importance of thermodynamics.		
2	Basic understanding of various types of thermodynamic systems.		
3	Understand the basic principles of thermodynamics systems.		
4	Understand the various types of boilers.		

Total No. of Lectures – 42 Lecture wise breakup No. of Lectures BASIC CONCEPTS: Introduction of thermodynamics, Concept of Continuum, 05 ThermodynamicSystem, Surrounding and Boundary, ThermodynamicEquilibrium, State, Path, Process, cycle, Quasi-static Process, Reversible and Irreversible Process, 1 Working Substance, Thermodynamic Properties, Zeroth Law of Thermodynamics, Temperature Scales, Concept of Heat and work in Thermodynamics. FIRST LAW OF THERMODYNAMICS: Joule's Paddle Wheel Experiment, 07 Mechanical Equivalent of Heat, First Law thermodynamics for closed and open systems, Different forms of stored Energy, Enthalpy, Energy of an isolated System, 2 Perpetual Motion Machine of First kind. Flow Process, Control Volume, work and Energy Equations, Throttling Process, Non-Flow work, Limitation of First Law. SECOND LAW OF THERMODYNAMICS: Second Law of thermodynamics, 05 Heat and Work, Thermal Reservoir, Planck and Clausius statements, Energy Analysis 3 of Heat Engine, Refrigerator and Heat Pump, Reversibility and Irreversibility, Carnot Theorem and cycle, Efficiency of the Reversible Heat Engine, Equality of Ideal Gas

	Temperature and Kelvin Temperature.	
4	ENTROPY: Clausius Theorem, Clausius Inequality and concept of Entropy, Entropy:	05
	Principle, application, Irreversible Process, Transfer with Heat Flow, generation in	
	closed and open System, Thermodynamics Equations relating properties of System,	
	Reversible Adiabatic work in a Steady flow System, Entropy and disorder.	
	AVAILABLE ENERGY AND AVAILABILITY: Available Energy referred to a	04
5	cycle, Quality of work, Maximum work in Reversible Process, Useful work, Dead	
	State, Availability, Second Law Efficiency.	
	GASPOWERCYCLES: Air Standard efficiency, Mean Effective Pressure, Otto,	04
6	Diesel, Dual, Brayton, Stirling and Ericson Cycle, Comparison of cycles. Equation of	
U	state of a gas, Properties of Mixture of gases, Internal Energy, Enthalpy, Entropy and	
	Specific heat of gas & mixtures.	
	PROPERTIES OF PURE SUBSTANCES: P-v, T-s, h-s, diagram for a Pure	05
	Substance, Properties of Pure substance with special reference to water, Steam and its	
	formation, Wet Dry, Saturated and Superheated Steam, sensible, Latent heat, Dryness	
7	fraction and its determination, Separating and Throttling calorimeter Enthalpy, Entropy	
	and Internal Energy of Steam, Use of Steam Table and Mollier Diagram, Basic	
	Thermodynamic Processes of Steam in Closed and Open System and their	
	representation on P-V and H-S chart.	
	INTRODUCTION TO STEAM GENERATORS/BOILERS: Classification of	03
0	boilers, fire tube boilers, water tube boilers, comparison between water tube and fire	
ð	tube boilers, guidelines for the choice of a new boiler, essentials of a good boiler,	
	boiler mountings and accessories.	
	VAPOUR POWER CYCLE: Carnot and Rankine Steam Power Cycle, Actual	04
0	Vapour cycle Processes, Comparison of Carnot and Rankine cycle, Mean Temperature	
9	of Heat Addition, Reheat Cycle, Ideal Regenerative Cycle Reheat Regenerative Cycle,	
	Feed Water Heater, Characteristics of an Ideal working fluid in Vapor Power cycle.	

Cours	Course Outcomes: By the end of this course, the student will be able to:				
1	Understand various Laws of thermodynamics and their application to wide range of systems.				
2	Familiarizes with efficiencies of Heat Engines and other Engineering Devices.				
3	Familiarizes with Pure substances, steam tables, Mollies diagrams and their applications to vapour				
	power cycles.				
4	Understand various types of boilers, their mountings and accessories.

Course Name	:	MECHANICS OF MATERIALS
<b>Course Code</b>	••	ME1033
Credits	••	3
LTP	:	2-1/2-2/2

**Course Objectives:** In this course, the student should be able to

**1.** Understand the advance topics of strength of materials and apply these to engineering problems.

2. Develop the basic skills and knowledge required to analyze stress, strain and failure in deformable solids.

	Total No. of Lectures –		
Lecture wise breakup			
	-	Lectures	
1	<b>COLUMN AND STRUTS</b> : Definitions, Euler's theory of columns buckling, Euler's equation for various end restraints, Rankine and other empirical formulae.	4	
2	<b>SPRING:</b> Close and open coiled helical springs under axial load and axial moment, leaf springs, flat spiral spring.	4	
3	<b>DEFLECTION OF BEAMS</b> : Relationship between bending moment, slope and deflection, moment area method, method of integration, Macaulay's method, Use of these methods to determine slope and deflection for statically determinate and statically indeterminate beams under various loading conditions.	5	
4	<b>THEORIES OF FAILURES</b> : Different theories of failures including Mohr's & Octahedral theories and their comparisons; Graphical representation and yield locus of these theories of failures for 2-D state of stress.	5	
5	<b>STRAIN ENERGY:</b> Strain Energy of various types of loads under different loading conditions, total strain energy for a 3-D state of stress, strain energy of dilation and distortion for a 3-D state of stress, deflection of beams via strain energy approach, Castigliano's theorem, Maxwell's reciprocal theorem of deflection and their applications.	5	
6	<b>THIN AND THICK SHELLS:</b> Thin cylinders and sphere, thick cylinders and sphere, comparison of thin and thick shell theories, compound cylinders, hub-shrunk on solid shaft.	5	

List of Experiments:		No. Hours	of
1	To perform Tensile Test on a given material and to determine its various mechanical	2	
	properties under tensile loading.		
2	To perform Compressive and shear test on a given material and to determine its various	2	
	mechanical properties under compression loading.		
3	To perform Torsion test on a given material and to determine various mechanical	2	
	properties under torsional load.		
4	To perform Column test of a given material and to determine its Euler's buckling load	2	
4	and Young's modulus of elasticity.		
5	To perform Impact test on a given material and to determine its resilience.	2	
(	To perform a test on close and open coil spring and determine its various mechanical	2	
0	parameters.		
7	To study and perform Fatigue test on a given material and to determine endurance	2	
7	strength and limit of the material.		

Course Outcomes: By the end of this course, the student will be able to:		
1	Apply these philosophies in engineering and applied sciences problems.	
2	Visualize any mechanical system as a model which is acted upon by various loads and stresses	
	induced in it.	
3	Apply the concept of mechanics of materials on advance system for its stress analysis.	
4	Analyze the failure analysis under static loading in ductile and brittle materials using different	
4	theories of failures.

Course Name	:	THEORY OF MACHINES
Course Code	••	ME1034
Credits	••	3
LTP	•	2 -1/2- 2/2

Course Objectives: In this course, the student should be able to

1. Understand the basics of machines and mechanism.

2. Understand the concepts of kinematic diagrams, kinematic chains & mobility, mechanisms and Kinematic analysis.

3. Understand various components used in power transmission devices.

L	Total No. of 1	Lectures – 28
Lecture wise breakup		No. of
		Lectures
	BASIC CONCEPTS: Kinematics and Dynamics of Machines, Mechanisms, Pairs,	
1	kinematic chain, four bar chain, Inversions of single and double slider crank chains,	3
	Degrees of freedom, Kutzbach's equation. Grubler's criterion, Joints	
	VELOCITY AND ACCELERATION: Relative motion, displacement, velocity,	
2	acceleration diagrams of different types of mechanisms, Relative velocity method,	3
2	instantaneous center method; Kennedy theorem, Klien's construction, Coriolis	5
	component, Numerical problems.	
	CAMS: Type of cams and followers, definition-basic circle & least radius, angle of	
2	ascent. Dwell, Descent & Action; Displacement, Velocity and Acceleration diagrams of	2
3	followers, Simple harmonic motion, Uniform and maximum velocity, acceleration and	5
	retardation, cycloidal motion.	
	GEARS AND GEAR TRAINS: Toothed gears: types, definitions and terminology,	
	pressure angle, path contact, arc of contact and approach, law of gearing, gear tooth	
4	profiles, involute and cycloidal gear systems, interference in involute gears; Gear	5
-	Trains: Types, simple and compound, epicyclic and reverted gear trains; Sun and	5
	planet gear, differential; Velocity ratio of worm and worm wheel, Helical and spiral	
	gears; spiral angle and efficiency; Numerical problems.	
	<b>GYROSCOPE:</b> Definition, axis of spin and precision, gyroscopic couple and effect on	
5	movement of ships and vehicles, stability of two and four wheel automobile; Numerical	2
	problems.	
	FLYWHEEL AND GOVERNORS: Turning moment and crank movement diagrams,	
	dynamics of simple horizontal and vertical engine. Fluctuation of speed, co-efficient of	
6	fluctuation of speed and energy, Punching press. Simple problems; Governors:	6
U	Functions, types and characteristics of governors, Sensitivity, stability, isochronism	0
	and hunting of governors, governor effort and controlling force curve, effect of sleeve	
	friction. Numerical problems.	
7	BALANCING: Classification, static and dynamic balancing, Primary and secondary	
	balancing of rotary and reciprocating masses, swaying couple and variation of tractive	6
	effort, hammer blow, partial balancing of locomotive, multi cylinder in line engines,	0
	balancing of V-engines.	

List	of Experiments:	No. of Hrs
1	To find displacement, velocity and acceleration of slider in a single slider crank	2
-	mechanism for different crank angles and draw various graphs.	
2	Verify experimentally the gyroscopic couple is given by $T = I.\omega. \omega_p$	2
3	Draw experimentally the approximate straight line be watts mechanism.	2
4	Find out the positions of the four weights, so that the system becomes statically &	2
-	dynamically balanced.	
	Find the moment of inertia of a given body about an axis passing through C.G. and	2
5	perpendicular to the plane of the body also calculate the minimum oscillation of the point	
	of suspension.	
	Balance experimentally as far as possible the known unbalanced force due to a rotating	2
6	weight by introducing two balancing weights in two different planes	
6	(a) Balancing planes on either side of unbalanced force	
	(b) Balancing planes on the same side of unbalanced force.	
7	Determination of characteristics curve of the Watt, Porter, Proell and Hartnell Governors	2
	using universal governor set up.	

Cours	<b>Course Outcomes:</b> By the end of this course, the student will be able to:		
1	Apply concepts of displacement, velocity and acceleration and their effects on the machine components.		
2	Apply these concepts in the design of machines components to avoid failure		
3	Solve the numerical problems based on kinematic analysis of linkages and engineering applications.

### **Course Objectives:**

- 1.To impart the knowledge of tools and tooling system used for fabrication of metal powder, plastic and ceramics parts.
- 2. To impart the knowledge about various machine tools and their applications in the conventional and nonconventional machining processes used in metal cutting.
- 3. To impart the knowledge of advanced non-conventional machining techniques and their applications for processing of conductive and non-conductive materials.
- 4. To impart the knowledge of rapid prototyping methods, rapid product development technique and its applications.

Total No. of Lectures – 28

Lecture wise breakup		No. of Lectures
1	<b>MACHINE TOOLS:</b> Classification, Specifications, Working principle and Applications of Lathe, Milling, Drilling, Boring, Broaching, Slotting, Sawing, Shaping, Planning, Grinding machines.	4
2	<b>PRINCIPLE OF METAL CUTTING AND MACHINING OPERATIONS:</b> Single, Double and Multipoint point cutting tools; Advanced cutting tool materials; Oblique cutting, Orthogonal cutting; Mechanics of chip formation; Types of chips; Merchant Force diagram; Tool life; Machinability; Machining parameters and their influence on machining performance, taper turning, thread cutting, knurling, indexing, hexagonal head, spline shaft and gear cutting.	6
3	<b>POWDER METALLURGY AND PROCESSING OF CERAMICS:</b> Principles, Advantages and limitations, Methods of producing powders. Applications of powder metallurgy parts, properties, Machining and Joining of ceramic metal powder components.	5
4	<b>PROCESSING OF PLASTICS:</b> Polymerization, Types of plastics, Fabrication and Processing of Plastics, Calendering's, Rotational molding, Injection and Blow molding, Helmet manufacturing, Machining and Welding of plastics.	4
5	<b>ADVANCEDMACHININGPROCESSES:</b> Need and objective of non-conventional machining methods. ECM, EDM, WEDM, USM, EBM, LBM, AJM: Working principle, Process parameters, Effect of process parameters on machining responses, Applications.	6
6	<b>RAPID PROTOTYPING:</b> Introduction, classifications, RP methods and rapid product development, applications.	3

List of Experiments:		No. of Hours
1	Gear cutting on milling machine	6
2	EDM of hard materials and study the effect of process parameters	4
3	Micro drilling using EDM process	4
4	Fabrication of plastic components using Injection molding setup	4
5	Product Development using 3D printing	4
6	Design and Fabrication for production of metal powder set-up	6

Cour	Course Outcomes: At the end of this course, the student will be able to:		
1	Clear the basic concepts and understand about the various manufacturing processes.		
2	Realize the importance of primary & secondary manufacturing operations and their actual		
	applications in manufacturing industry.		
3	Understand about the tools, tooling, machine tools and other related equipment's being used in		
	manufacturing.		
4	Come up with innovative conceptual idea about manufacturing processes and their industrial		
	applications

	I.C. ENGINES: Introduction to I.C. Engines, Construction and operation of 2-S and 4-	5
	S engines, valve timing diagrams, Combustion in IC Engines. Performance of IC	
1	Engines: Performance curves of C.I. and S.I. engines. Overall IC Engine performance	
	(engine sizing, mean effective pressure, power and torque), Effect of compression ratio	
	and air fuel ratio on power and efficiency of an engine.	
	<b>RECIPROCATING COMPRESSOR:</b> Introduction, classification of air	4
2	compressors, work input and the best index of compression, thermal and polytropic	
4	efficiency of compressor, Effect of clearance and volumetric efficiency, Multi stage	
	compression and its advantages.	
	CENTRIFUGAL COMPRESSOR: Principle of operation, components of a	3
	centrifugal compressor complete thermodynamics analysis of centrifugal compressor	
3	stage, isentropic and Isothermal efficiencies, work done and pressure rise, Velocity	
5	vector diagrams for centrifugal compressors and power calculation, pre-guide vanes	
	and pre-whirl, slip factor, power input factor, degree of reaction and its derivation,	
	energy transfer in backward, forward and radial vanes.	
	AXIAL FLOW COMPRESSOR: Component of axial flow compressor and their	3
	arrangement, Principle of operation, velocity vector diagrams, thermodynamics	
4	analysis and power calculation, Factors affecting stage pressure rise, work done factor,	
-	Degree of reaction and blade Efficiency and their derivation, Isentropic, Polytropic and	
	isothermal efficiencies, Surging, choking and stalling in axial flow compressors,	
	Characteristics curve for axial flow compressors.	
	STEAM TURBINES: Introduction, General description of Impulse and Reaction	5
	steam turbines, Impulse Turbine: General description, pressure and velocity	
_	compounding, Velocity diagram and work done, Blade efficiency and overall	
5	efficiency Reheat factor and condition curve, <i>Reaction Turbine</i> : Degree of reaction,	
	Velocity diagrams, blade efficiency and its derivation, Losses in steam turbines, stages	
	in turbine system, the HP and LP by-pass system, vacuum maintaining in a turbine,	
	load and speed governing of turbine.	4
	GAS TURBINES: Introduction, classification of gas turbines on the basis of system	4
	of operation and on the basis of combustion (at constant volume or at constant	
6	pressure), I hermodynamics of constant pressure gas turbine cycle, calculation of net	
	output, work ratio and thermal efficiency of ideal and actual cycles.	
	Informal refinements and their effects on gas turbine cycle, i.e., gas turbine cycle with	
	regeneration, inter cooling and reneating, multistage compression and expansion.	2
7	<b>NULLES AND DIFFUSERS:</b> Types and utility of nozzles, Flow of steam through	2
1	1 nozzies, Effect of inclion, nozzie efficiency, Critical pressure conditions for maximum	1

	discharge, Supersaturated flow, Classification of diffusers, effect of friction and area change, converging-diverging super-sonic diffuser.	
8	<b>CONDENSERS:</b> Introduction, Elements of condensing plants, Brief description of different types of condensers, Dalton's law of partial pressure applied to condenser problems, condenser and vacuum efficiencies, Cooling water calculations, Effect of air leakage, Method of checking and preventing air infiltration, Description of air pump and calculation of its capacity.	2

List of Experiments:		No. of Turns
1	To study the construction and operation of a two stroke and four strokes petrol & diesel engine and study of valve timing diagram for a Diesel Engine.	1
2	To find the Volumetric Efficiency, Brake Thermal Efficiency Mechanical Efficiency, Frictional Power, Indicated Power Heat Balance sheet of Variable Compression Ratio Petrol Engine at different Compression Ratios and study its effect on various parameters.	1
3	To estimate the Indicated Power, Friction Power and Mechanical Efficiency of a multi- cylinder Petrol Engine when running at constant speed under constant settings of a carburetor by cutting one, the power of one cylinder each in turn (Morse test).	1
4	To find the Volumetric Efficiency, Brake Thermal Efficiency, Mechanical Efficiency, Frictional Power, Indicated Power, Heat Balance Sheet of Variable Compression Ratio Diesel Engine at different Compression Ratios and Study its effect on various parameters.	2
5	To study and draw the vapor compression cycle for a refrigeration test kit under different variables.	1
6	To draw the fundamental vapor compression cycle for window AC test rig and calculate its COP and cooling capacity.	1

Cours	<b>Course Outcomes:</b> By the end of this course, the student will be able to:			
1	Develop problem solving skills through the application of thermodynamic principles.			
2	Develop basic understanding of various devices like engines, compressors, turbines, compressors, etc.			
3	Understand the different components of IC Engines through lab scale experiments.			
4	Optimize the existing thermal system and designing newer-ones, as per requirements.

Course Name	:	MECHANICAL VIBRATIONS
Course Code	:	ME1044
Credits	:	3
LTP	:	2-1/2-2/2

**Course Objectives:** In this course, the student should be able to understand the

1. Causes, sources and the basic principles of mechanical vibrations.

2. Mechanical Vibration concepts to one, two, multi and infinite degree of freedom systems with different systems components.

3. Concept of numerical methods applicable to study vibration in any engineering system design.

4. Concepts of modal analysis in study of vibrations.

Total No. of Le			28
Lecture wise breakup			of
		Lectures	
	<b>INTRODUCTION:</b> Basic concept of vibration, Importance and scope, definition and	3	
1	terminology, representation and analysis of harmonic motions/series and, Fourier series,		
1	beat phenomenon, work done by a harmonic force on an harmonic motion, introduction		
	to various types of vibrations and types of excitation.		
	SINGLE DEGREE OF FREEDOM SYSTEMS: Undamped free vibrations: D'	11	
	Alembert's Principle, Energy method, Rayleigh method, Newton's second law of		
	motion and its applications in these problems, equivalent spring stiffness, Damped free		
	vibrations: Introduction to viscous damping, sub-critical, critical and over-damping		
2	systems and its solutions, logarithmic decrement, frequency of damped oscillations; Dry		
	friction, Structural damping and Slip damping and its analysis, <i>Forced vibrations:</i> Force		
	vibration analysis for constant harmonic excitation, rotating & reciprocating unbalance		
	masses, support excitation Vibration isolation and transmissibility, vibration measuring		
	instruments.		
	TWO DEGREE OF FREEDOM SYSTEMS: Undamped and damped vibrations,	4	
3	principal mode of vibration, normal modes, nodes, natural frequencies, mode shapes,		
5	Torsional vibrations, application of Two degree of freedom in dynamic vibration		
	absorber.		
	MULTI-DEGREE OF FREEDOM SYSTEMS - EXACT ANALYSIS: Undamped	6	
4	free vibrations, Reciprocity theorem, Matrix Inversion method, Eigen values & Eigen		
-	vectors, orthogonal properties of normal modes, modal analysis, Free vibration analysis		
	of string, longitudinal vibrations of bar.		
	MULTI-DEGREE OF FREEDOM SYSTEMS- NUMERICAL METHOD:	4	
5	Rayleigh, Dunkerley and Matrix Iteration as applied to multi degree of freedom		
	systems, comparison of natural frequencies by these methods		

List of Experiments:		
1	To study the forced vibration of the beam for different damping.	2
2	To determine the radius of gyration 'k' of a given compound pendulum.	2
3	To determine the radius of gyration of bi-filar and tri-filar suspension.	2
4	To study the pressure profile of lubricating conditions of load and speed.	2
5	To determine the natural frequency of undamped torsional vibration of a single rotor	2
	shaft system.	
6	To determine the frequency of undamped free vibration of a cantilever beam.	2
7	To determine the frequency of damped force vibration of a cantilever beam.	2

<b>Course Outcomes:</b> By the end of this course, the student will be able to:			
1	Apply the concept of Mechanical Vibration in engineering and applied sciences problems in general.		
2	Apply the concept of Mechanical Vibration to one, two, multi and infinite degree of freedom systems		

	with different systems components.
3	Understand this as a fundamental tool for modeling and analyzing mechanical system.
4.	Derive the dynamic model of real-life problems and verify the natural frequencies and mode shapes.

	NC AND CNC MACHINES: Introduction, Components, Control systems, CNC	4	
1	tooling and fixtures, CNC part programming: basic G-Codes and M-Codes, Canned		
	cycles, Manual part programming, Computer aided part programming (APT).		
	JIGS & FIXTURE DESIGN: Principles, design of jigs and fixtures,	6	
2	degrees of freedom, principle of locating and clamping, hydraulic and pneumatic		
4	locating and clamping devices, jigs for drilling, drill bushes; <i>Fixtures:</i> milling, lathe,		
	drilling, grinding.		
	TOOL AND DIE DESIGN: Press tool operations: Shearing, blanking, piercing,	6	
	trimming, shaving, notching, nibbling, coining, bending, drawing, embossing, stretch		
3	forming; Press working equipment's, <i>Dies:</i> Types, components of cutting die; methods		
	of reducing cutting forces; Die design: blanking die, piercing die, drawing die and		
	bending die, forging dies, design of die blocks, punches and strippers; Strip layout.		
	MANUFACTURING OF TOOLS AND DIES: Manufacturing of Single, double and	4	
4	multi-point cutting tools, Carbide tool inserts, brazed tools, coated tools,		
	Manufacturing of Dies, die materials, various conventional and non-conventional		
	methods for die manufacturing, heat treatment of cutting tools and dies.		

5	<b>METROLOGY&amp; INSPECTION:</b> Limits, fits and tolerances, standard and limit gauges, design of gauges, steps of inspection, introduction to coordinate measuring machine and automated inspection technique, elements and relationship of surface finish related to production methods and measurement; measuring devices used in inspection and quality control.	4
6	<b>OPTIMIZATION OF MACHINING CONDITION:</b> Optimization of cutting speed for minimum cost and maximum production, machining parameters optimization, Machine Tool replacement, method of distributing depreciation, Introduction to reverse engineering and applications.	4

Cours	se Outcomes: By the end of this course, the student will be able to:
1	Develop computer part programming for various operations on CNC machines.
2	Design and fabricate the die blocks and punches for various sheet metal operations.
3	Select suitable manufacturing methods for required geometrical tolerance and mechanical assembly.
4	Optimize the machining process to reduce the machining time and manufacturing cost along with a
	detailed cost analysis of overall production system.

	GENERAL DESIGN CONSIDERATION: Scope and meaning of design with special	5	
	reference to machine design, design processes, Concept of tearing, bearing, shearing,		
1	crushing, bending, etc. Selection of materials, Factors of safety under different loading		
	conditions, stress-concentration factors, Design stresses for variable and repeated loads.		
	Endurance limit and strength, Fits, tolerances and surface finish.		
	FASTENERS: Screws, bolts, preloaded bolts, uniform strength screws, bolts subjected	5	
2	to shear, tension and torque, eccentrically loaded bolted joints. Welded and riveted		
	connection, eccentrically loaded welded and riveted connections.		
	SHAFTS AND AXLES: Review of torsional equation for circular shafts, Design of	4	
3	circular shafts subjected to axial, bending and torsional loading and its combinations		
	under different theory of failures.		
	DESIGN OF FLEXIBLE MACHINE ELEMENTS: Belts (Flat & V), types of drives		
	and orientations of driving & driven shaft covered by flat and V belts along with design		
4	of belts, pulleys, keys & shafts. Types of V-belts, their power ratings & design thereof,	6	
	Concept and application of timing belt. Chains- roller chains, their designation by IS,		
	designing w.r.t. sagging, centrifugal & transmittal loads, Complete sizing of sprockets.		
	BEARINGS: Types of bearings, Selection of a sliding and Rolling Bearings, Design of		
	Journal Bearing: Somerfield number, bearing modulus, material for journal bearing,		
	types of lubricants, their designated numbers. Concept of bearing body, oil &		
5	environment temperatures, Calculation of heat generation and dissipation, Design of	6	
5	bearing cap & bolts, Design of Rolling Contact Bearings: their designation w.r.t. duty,	0	
	type & diameter, Concepts of catalogue, average and rating life, Bearings subjected to		
	different loads for different time during one cycle and their equivalent dynamic load		
	carrying capacity.		
6	<b>DESIGN OF CLUTCHES &amp; BRAKES:</b> Design of Clutches: Axial and Radial		
	friction clutches, clutch load characteristics, mechanical (friction) clutches, design for		
	uniform wear & pressure theories, Centrifugal clutches design, Brakes: Design of single	6	
	& double block brakes, Concepts of self-locking brakes, Design of External & Internal		
	shoe brakes, Band Brakes and Band & Block brakes.		
	DESIGN OF GEAR DRIVES: Factors influencing the choice of a gear, Design		
7	Details of Spur, Helical, worm and bevel gears, Nomenclature & designing of all these	10	
	gears from basics of tooth loading as done by Lewis and checks for dynamic loading by		

Buckingham equations, beam strength, Wear load calculations and design of shafts for	
all these gears.	

Cours	Course Outcomes: At the end of this course, the students will be able to:		
1	Select the suitable materials and manufacturing considerations.		
2	Calculate stresses involved with static, dynamic and fatigue loading.		
3	Conduct a failure analysis for the design/sizing of mechanical components.		
4	Design a mechanical system with special focus on power transmission.

	INTRODUCTION: Introduction to FEM and historical background, Brief overview of	6	
	the steps used in FEM, Various approaches to formulate elemental equations,		
	Difference among FEM, FDM and closed form solutions, Need to study FEM, Review		
1	of the concept of stresses, strains, displacements and their relations, Von-Mises stresses,		
	equilibriums, boundary conditions, temperature effect, Concept and application of		
	Minimum Potential energy method, Rayleigh Ritz method, Galerkin Method and		
	Principle of Virtual Work as applied to elasticity problems.		
	MATRIX ALGEBRA & GAUSS ELIMINATION METHOD: Matrix algebra and	2	
	its different operations, Special feature of matrix algebra useful to FEM, Eigen values		
2	and Eigen vectors, Positive definite matrix, Gauss elimination method to solve large		
	linear equations.		
	1-D PROBLEMS: Introduction, finite element modelling using bar element, shape	8	
	functions, Iso, super and sub parametric FEM formulation, Potential energy approach to		
2	solve 1-D problems, assembly of elemental equations, Properties of global stiffness		
3	matrix, types and applications of boundary conditions, higher order 1-D element and		
	their shape functions, its application to 1-D problem, Accounting of temperature effect		
	in 1-D problems.		
	TRUSSES PROBLEMS: Introduction, 2-D and 3-D trusses, concept of local and	4	
4	global coordinate system and its transformation matrix, solution of 2-D and 3-D trusses,		
	stress calculations, Accounting of the temperature effect.		
	2-D PROBLEMS USING CONSTANT STRAIN TRIANGLES (CST):	6	
	Introduction, finite element modelling using CST elements and shape functions,		
5	Potential energy approach, solution of 2-D problems, Accounting of temperature effect,		
	Problem modelling and boundary conditions for symmetrical problems, orthotropic		
	materials.		
	2-D ISO-PARAMATRIC ELEMENTS AND NUMERICAL INTEGRATION:	6	
	Introduction, Four-noded quadrilateral element-based FE Modelling and its solution,		
6	Numerical integration, Concept of weights and Gauss points and its values, Formulae,		
	2-D & 3-D numerical integration and applications, Higher order quadrilateral and		
	triangular elements and it's numerical integration.		
	BEAMS AND FRAMES: Introduction, Potential energy-based FE formulation using	6	
7	beam and frame elements, Boundary consideration, shear stress and bending moment,		
	beams on elastic supports, plane frames, 3-D frames.		
	DYNAMIC PROBLEMS: Introduction, mass matrix as used in the FEM, elemental	4	
8	mass matrix for different types of elements as studied above, Evaluation of Eigen values		
	and Eigen vectors.		

List of experiments	No. of Hrs		
Students shall be solving the different engineering problems on relevant CAD software	28		
available in the laboratory.			

Course Outcomes: After successful completion of this course, students will be able to

**1.**Apply the concepts behind various formulation methods used in FEM.

**2.**Identify and select suitable type of elements for a problems and generation of global equations.

**3.**Identify and apply boundary conditions to global equations and to solve these equations.

4. Interpret the output of FEM based software in more meaningful manner.

Sr.	Experiments	Hours
No.		
1	Measurement of screw thread element using tool makers microscope & optical projector.	4
2	Measurement of angle using Sine Centre / Sine bar / bevel protractor	4
3	Measurement of gear tooth thickness using gear vernier caliper.	4
4	Measurement of surface roughness using tally surf	4
5	Calibration of Pressure Gauge, Thermocouple, LVDT, load cell, micrometer	4
6	Determination of modulus of elasticity of a mild steel specimen using strain gauges	4
7	Measurements using Optical Projector / Toolmakers' Microscope.	4

Cours	Course Outcomes: By the end of this course, the student will be able to:		
1	Apply the basic principles of measurements, various techniques and measuring parameters.		
2	Demonstrate a critical awareness of the underlying principles of the different measuring instruments		
1	and devices.		
3	Apply the measurement methods and techniques of computerized image processing.		
4	Recognize the latest measuring instruments for measurement of various mechanical and other		
	quantities.

Cours	Course Objectives:					
1	To develop an understanding of all the sub-components of an automotive vehicle.					
2	To give knowledge about all the controlling and electronic components.					
3	To gain the knowledge about new technologies being used in automotive vehicles.					
	Total No. of Lectures – 42					

## Lecture wise breakup

		Lectures
1	<b>INTRODUCTION:</b> History of Automotive engineering, Classification of Automotive	2
	vehicles, Different sub-systems in automotive vehicles.	
2	<b>COOLING AND LUBRICATION SYSTEMS:</b> Cooling systems and their components, anti-freeze mixtures. Lubrication purpose and various systems of lubrication, types and desirable properties of lubricants, components like oil filters, oil pumps, and oil pressure indicators, air supply system, air filters, turbo charger and super charger.	5
3	<b>FUEL SUPPLY SYSTEMS:</b> Fuel injection system for petrol and diesel engines, fuel pumps (mechanical and electrical), air fuel ratio requirements, carburetors: types and general operation throttle body and multipoint fuel injection systems, electronic control module and sensing devices.	5
4	<b>TRANSMISSION SYSTEMS:</b> Clutch function and types, torque converters; fluid flywheel; manual and automatic transmission/ trans axles; constant mesh & synchro mesh gearboxes, epi-cyclic gearbox, differential, propeller shafts and universal joint front and rear axles.	4
5	<b>BRAKE SYSTEMS, WHEEL &amp; TYRES:</b> Braking efficiency and stopping distances. Types of brakes, Drum and disc brakes. Detailed description of hydraulic and pneumatic brake. Mechanical, vacuum and electrical methods of brake actuation, servo brakes, ABS, type of wheels, tyres, type of tyres; cross ply, radial tubeless etc. specification of tyres.	5
6	<b>SUSPENSION SYSTEM:</b> Road springs, shock absorbers, independent suspension,	4

of

No.

	road springs, air suspension, hydro-elastic suspension.	
	STEERING SYSTEM: Steering geometry, details, correct steering angle, Ackerman	5
7	steering mechanism. Cornering power, over steering and under steering. Worm wheel	
	and Rack pinion types of steering gears. Safety steering columns, power steering.	
0	IGNITION SYSTEM: Various ignition systems ( coil and magneto) and detailed	4
0	study of their components, electronic ignition system, distributor less ignition system	
	BATTERY AND STARTING SYSTEMS: Storage battery (lead acid type),	4
0	Maintenance free batteries, various components, Charging system, starting motors,	
9	starting drives, Bendix drive, Electronic starter control, starting system trouble	
	shooting.	
10	EMISSION CONTROL: Emission norm like EURO and BHARAT norms, methods	2
10	and devices to control emissions.	
	MISCELLANEOUS TOPICS: Automotive accessories, hydraulic single lever and	2
11	two lever hydraulic systems for tractors, Technical specifications, controlling devices	
11	such as fuel gauge, temperature gauge, indicator lights speedometer odometer, HVAC	
	etc.	

List of Experiments		No. of Turns
1	To study and prepare report on the constructional details, working principles and operation of the Automotive Engine Systems & Sub Systems.	2
2	To study and prepare report on the constructional details, working principles and operation of the Fuels supply systems.	1
3	To study and prepare report on the constructional details, working principles and operation of the Automotive Clutches.	1
4	To study and prepare report on the constructional details, working principles and operation of the Automotive Transmission systems.	2
5	To study and prepare report on the constructional details, working principles and operation of the Automotive Drive Lines & Differentials.	2
6	To study and prepare report on the constructional details, working principles and operation of the Automotive Suspension Systems.	1
7	To study and prepare report on the constructional details, working principles and operation of the Automotive Steering Systems.	2
8	To study and prepare report on the constructional details, working principles and operation of the Automotive Tyres & wheels.	1
9	To study and prepare report on the constructional details, working principles and operation of the Automotive Brake systems.	1
10	To study and prepare report on the constructional details, working principles and operation of Automotive Emission / Pollution control systems.	1

Cours	<b>Course Outcomes:</b> By the end of this course, the student will be able to:		
1	Identify the systems and sub-systems of a typical automobile.		
2	Analyze prime movers based on their configuration.		
3	Outline the functions of cooling, lubrication and power transmission system and its components		
4	Interpret advanced concepts in Steering, Suspension and Braking systems		
5	Adopt recent innovations in automobile sector like wheels, tires, air conditioning and lighting.

Course Name	:	MECHANISMS AND MACHINES
Course Code	:	ME2005/ME4005
Credits	:	4
LTP	:	3 -1- 0

Course Objectives: In this course, the student will be able to understand the

- 1. Concepts of various basic Mechanisms and Machines.
- 2. Kinematic analysis and synthesis of mechanisms.

3. Design process based on different mechanisms for a given application.

4. Mechanisms to be used for various machines and do failure analysis.

Total No. of Lectures – 42		
Lectu	re wise breakup	No. of
		Lectures
1	<b>INTRODUCTION:</b> Mechanisms, classifications, relative and absolute motion, four bar mechanisms, planar and spatial mechanisms, inversion and equivalent linkage, transmission deviation and pressure angles, kinematic analysis of planar motion, relative velocity and velocity difference, pole and centrodes, relative acceleration and acceleration difference.	6
2	<b>KINEMATIC SYNTHESIS OF MECHANISMS:</b> Movability, Number synthesis, Frudenstein's equation, Chebyshev spacing of precision points, Stages of kinematic synthesis and errors, Two and three position synthesis of Four-bar mechanism & slider crank mechanism, Overlay method, Bloch's method, Transmission angle in four bar and slider crank mechanism, function and path generation, Limit position & Least square techniques.	10
3	<b>LOWER PAIRS:</b> Universal joint- single and double, calculation of maximum torque, Oldham's Coupling, steering mechanism including Ackermann's and Davis steering mechanism, concepts of power steering, Mechanism with lower pairs, pantograph, exact and approximate straight-line motion, engine indicator, elliptical trammel.	6
4	<b>BELTS, ROPES AND CHAINS:</b> Materials, type of drive, idle pulley, intermediate or counter shaft pulley, angle and right-angle drive, quarter turn drive, velocity ratio, crowning of pulleys, loose and fast pulleys, stepped or cone pulleys, ratio of tensions on tight and slake sides of belts. Power transmitted by belts including consideration of creep and slip, centrifugal tension and its effect on power transmitted. Use of gravity, idler, flat, V-belts and rope, materials, Length of belt, rope and chain drive, types of chains.	6
5	<b>FORCE ANALYSIS:</b> Couple, equilibrium of forces and force systems, Free body diagrams, D-Alembert principle, Forces on slider crank mechanism, quick return mechanism & four-bar mechanism with more than two forces acting on a link, slider crank mechanism, Forces and couples for link and reciprocating parts; Dynamically	6
	equivalent system. analytical and graphical methods of solutions; Torque, inertia and gravitational force of a four bar linkage.	
---	--	---
6	<b>BRAKES AND DYNAMOMETERS:</b> Types of brakes, principles of friction brakes, band, band & block and internal expanding shoe brakes, differential band brake, description of vacuum brake, types of dynamometers, measurement of power by prone brake and rope brake dynamometers, Heenan and Froude's Hydraulic dynamometer, Bevis-Gibson's flash light torsion dynamometer, belt transmission dynamometer.	8

Course Outcomes: By the end of this course, the student will be able to:		
1	Draw displacement, velocity and acceleration diagrams.	
2	Apply these concepts in the design of machines components to avoid failure.	
3	Solve the engineering problems based on kinematic analysis of linkages and engineering applications.

	BACKGROUND: Introduction, kinds of failure & history, brittle and ductile fracture,	
1	modes of fracture failure, different techniques of fracture mechanics, potency of a crack,	3
	damage tolerance.	
	ENERGY RELEASE RATE (ERR): Introduction, Griffith's work and his dilemma,	
	Surface energy, Griffith's realization and analysis, Mathematical formulation of ERR,	6
2	ERR of Double Cantilever Beam specimen, anelastic deformation at crack tip, crack	
	resistance, stable and unstable crack growth, R- curve for brittle crack, Thin plate v/s	
	thick plate, critical ERR.	
	STRESS INTENSITY FACTOR (SIF): Introduction, Linear Elastic Fracture	
3	Mechanics, stress and displacement fields in isotropic elastic material, SIF and its	9
	mathematical background, Approach of Westergaard for different mode of fracture and	

	its analysis.	
4	<b>SIF OF MORE COMPLEX CASES:</b> Other applications of Westergaard approach, application of the principles of superposition, crack in a plate of finite dimensions, Edge and embedded cracks, Relationship between ERR and SIF, critical SIF, bending and twisting of cracked plates.	5
5	<b>ANELASTIC DEFORMATION AT THE CRACK TIP:</b> Investigation at the crack tip, approximate shape and size of the plastic zone, effective crack length, effect of plate thickness.	4
6	<b>ELASTIC PLASTIC ANALYSIS THROUGH J-INTEGRAL:</b> Relevance and scope, definition of J-integral, path independence, stress-strain relation, discussion on J-integral, Engineering Approach of J-integral.	4
7	<b>CRACK TIP OPENING DISPLACEMENT (CTOD):</b> Introduction, relationship between CTOD, SIF and ERR for small scale yielding, Equivalence between CTOD and J integral,	4
8	<b>TEST METHODS:</b> $K_{IC}$ test techniques, Test methods to determine $J_{IC}$ , Test methods to determine $G_{IC}$ and $G_{IIC}$ , Determination of critical CTOD.	2
9	<b>FATIGUE FAILURE:</b> Introduction, Terminology, S-N curve, crack initiation, crack propagation, Effect of an overload, crack closure, variable amplitude fatigue load.	3
10	<b>CRACK DETECTION THROUGH NDT:</b> Visual, LPI, Magnetic Methods, Radiography, Ultrasonic	2

## **Course Outcomes:**

After completion of this course, students will be able to

1. Analyze the behavior of engineering materials having microscopic flaws by various approach.

**2.**Apply the concepts of fracture mechanics philosophy to design of structural components taking into account presence of flaws, nature of loading and constitutive behavior of the material.

**3.**Apply the concept of fatigue failure of structure under variable fluctuation loading to engineering and applied sciences problems with lower factor of safety.

**4.**Conduct experiments in the laboratory following standard test procedures to determine the fracture toughness of materials.

2	Relationship of Compliance and Stiffness Matrix to Engineering Elastic Constants of a	
	Lamina, Hooke's Law for a 2-D Angle Lamina, Invariant Form of Stiffness and	
	Compliance Matrices for an Angle Lamina, Failure Theories of an Angle Lamina:	
	Maximum Stress Failure Theory, Strength Ratio, Failure Envelopes, Maximum Strain	
	Failure Theory, Tsai-Hill Failure Theory, Tsai-Wu Failure Theory, Comparison of	
	Experimental Results with Failure theories. Hygrothermal Stresses and Strains in a	

	unidirectional and angle Lamina.	
3	<b>MICRO-MECHANICAL ANALYSIS OF A LAMINA:</b> Introduction, Volume and Mass Fractions, Density, Void Content, <i>Evaluation of the Four Elastic Moduli</i> : Strength of Materials Approach, Semi-Empirical Models, Elasticity Approach and Elastic Moduli of Lamina with Transversely Isotropic Fibers for various types of modulus, Ultimate Strengths of a Unidirectional Lamina for tensile, longitudinal compressive, transverse compressive and in-plane shear, Longitudinal and transverse Thermal Expansion Coefficients, Thermo-elastic Deformation Analysis, Coefficients of Moisture Expansion.	10
4	<b>MICROMECHANICAL ANALYSIS OF LAMINATES:</b> Introduction, Laminate Code, Stress–Strain Relations for a Laminate, One-Dimensional Isotropic Beam, Stress-Strain Relation, Strain-Displacement Equations, Strain and Stress in a Laminate, Force and Moment Resultants Related to Mid-plane Strains and Curvatures, In-Plane and Flexural Modulus of a Laminate, Hygrothermal Effects in a Laminate like Hygrothermal Stresses and Strains, Coefficients of Thermal and Moisture Expansion of Laminates, Warpage of Laminates.	9
5	<b>FAILURE ANALYSIS AND DESIGN OF LAMINATES:</b> Introduction, <i>Special Cases of Laminates</i> : Symmetric Laminates, Cross-Ply Laminates, Angle Ply Laminates, Anti-symmetric Laminates, Balanced Laminate, Quasi-Isotropic Laminates, Failure Criterion for a Laminate, Design of a Laminated Composites, Other Mechanical Design Issues, Sandwich Composites, Long-Term Environmental Effects, Inter-laminar Stresses, Impact Resistance, Fracture Resistance, Fatigue Resistance.	6

Course Outcomes: After successful completion of this course, students will be able to

**1.**Determine the mechanical properties of various commercial composite materials.

**2.**Predict the failure strength of a lamia composite.

3.Perform linear elastic analysis of composite materials.

**4.**Develop a methodology for stress and progressive failure analysis of laminated composite structures for aerospace, automobile, marine and other engineering applications.

Course Name	••	VEHICLE DYNAMICS
Course Code	••	ME2011/ME4011
Credits	••	4
LTP	:	3-0-2

Course Objectives:		
1	To understand the basic principles used in dynamic analysis of vehicles.	
2	To gain the basic knowledge in the field of vehicle vibrations.	

2	To understand the stability of vehicles and their effects related to longitudinal, vertical & lateral
3	dynamics.

	Total No. of	Lectures – 42
Lectu	re wise breakup	No. of Lectures
1	<b>BASICS OF MODELING:</b> Introduction to Vehicle dynamics, Fundamental approach of Modeling, lumped mass, Euler Angles, Vehicle fixed and Earth fixed coordinate systems, motion variables, Newton's second law, Dynamic axle load, static loads on level ground, Role of inertia, Road modeling.	6
2	<b>TYRE DYNAMICS:</b> Tyre forces and moments, Tyre structure, Size and Load Rating, Terminology and Axis System, Tractive and cornering property of tyre, Camber Thrust, Castor, Aligning Moment, Combined Braking and Cornering, Conicity and Ply Steer, Performance of tyre on wet surface, Ride property of tyres, Magic formulae tyre model, Estimation of tyre road friction, Test on Various road surfaces, Tyre vibration and chattering.	6
3	<b>VEHICLE VIBRATIONS</b> : Measures of Ride quality, predictions of vibrations, suspension stiffness and damping, road roughness models, response to speed breakers, Heave, pitch and roll phenomenon of dynamic motion, quarter, half and full vehicle model, Seat suspension, relation to human body vibrations.	6
4	<b>SUSPENSIONS:</b> Suspension Kinematics, Suspension types, Solid Axles, Independent Suspensions, Anti-Squat and Anti-Pitch Suspension Geometry, Anti-Dive Suspension Geometry, Roll Center Analysis, Suspension Dynamics, Multi-body vibration, Body and Wheel hop modes, Invariant points, <i>Controllable Suspension Elements</i> : Active, Semi-Active. Choice of suspension spring rate, Calculation of effective spring rate, Vehicle suspension in fore and apt directions.	6
5	<b>STEERING SYSTEM:</b> Steering Linkages, Steering System Forces and Moments, Steering System Models, Steering Geometry, Steady Handling (2 DOF steady state model), Under and Over-steer, Effect of Tyre Camber and Vehicle Roll (3 DOF steady-state model), Transient Handling and Directional Stability (2 DOF unsteady model), Effect of Vehicle Roll on Transient Handling (3 DOF unsteady model), Steady-State and Transient Handling of Articulated Vehicles.	б
6	<b>LONGITUDINAL DYNAMICS:</b> <i>Dynamic wheel loads</i> : Simple vehicle model, influence of grade, Aerodynamic Forces and Moments, Resistance, Rolling Resistance, Load Distribution for Three Wheeler and Four Wheeler, Calculation of Maximum Acceleration, Reaction Forces for Different Drives, Braking and Driving Torque, Prediction of Vehicle Performance.	6
7	<b>LATERAL DYNAMICS:</b> Steady State Handling Characteristics, Steady State Response to Steering Input, Testing of Handling Characteristics, Transient Response Characteristics, Direction Control of Vehicles Roll Center, Roll Axis, Vehicle Under Side Forces, Stability of Vehicle Running on Slope, Banked Road and During Turn, Effect of Suspension on Cornering, Latest Trends in Vehicle Dynamic Testing Like Four Poster, Multi Axis Simulator.	6

<b>Course Outcomes:</b> By the end of this course, the student will be able to:		
1	Apply the basics of vibration, when the vehicle is at dynamic condition.	
2	Apply the tyre dynamics with respect to force & moments.	
3	Derive the effective cornering stiffness and analyze effect on the dynamic characteristics of the	
	vehicle.	
4	Apply the aerodynamic forces & moments, load distribution in the various vehicles.	
5	Test the effective steering geometry, vehicle handling & directional control of vehicle.	

List of experiments No of Hrs

The experiment work in this course is intended to be carried out to simulate and study a quarter,	28
half and full vehicle models, behavior of sprung / un-sprung mass & lumped mass system and the	1
effect of different conditions on vehicle loading using MATAB and ANSYS software in the CAD	l
Lab. In addition, study of latest technologies available nowadays in vehicles helping to maintain	1
stability of the vehicle on the road.	I

	<b>INTRODUCTION</b> : Heat Engines, Internal and external combustion engines,	4	
1	classification of I.C. Engines, Cycles of operation in 4 stroke /2stroke /SI/CI engines,		
1	Valve timings diagram, low speed and high-speed engines, Rotary /Wankel Engines,		
	Applications, Performance parameters.		
	WORKING CYCLES: Air standard cycles: assumptions, Otto, Diesel and Dual	4	
2	cycles, efficiency, M.E.P. & their comparison. Fuel Air Cycles: effect of dissociation		
2	and operating variables, comparison of air standard and fuel-air cycles. Actual Cycles,		
	losses, comparison with air standard cycles.		
	IC ENGINES' SYSTEMS: Carburetion System: definition, Air-Fuel ratio, simple	9	
3	carburetor, essential parts of carburetor, compensating devices. Fuel Injection Systems:		
	classification, parts of mechanical fuel injection systems and brief study of electronic		
	injection systems. Ignition Systems: energy requirement, Battery/ Magneto/ Modern		
	ignition systems, i.e., TCI and CDI systems, Ignition timing and firing order, Spark		
	advance mechanism. Cooling and Lubrication Systems: wet, mist and dry sump		
	lubrication systems, Factors affecting mechanical friction, Lube properties SAE rating,		

	necessity of cooling, parameters affecting engine heat transfer, air and water cooling,	
	Radiators	
	COMBUSTION IN I.C. ENGINES: Homogeneous/Heterogeneous mixtures, stages	8
	of combustion in S.I. Engines, velocity of flame propagation; detonation, effects of	
4	engine variables on detonation; theories of detonation, pre-ignition, S.I. engine	
	combustion chambers. Stages of combustion in C.I. Engines; delay period; variables	
	affecting delay period; knock in C.I. engines, C.I. engine combustion chambers.	
	ENGINE EMMISSION AND CONTROL: Pollution due to IC Engines, Exhaust	4
	Emissions -Hydrocarbons, Carbon Monoxide, Oxides of Nitrogen (NOx), Other	
5	Emissions. Controls: Thermal Converters, Catalytic Converters, Particulate Traps,	
	Chemical Methods, Exhaust Gas Recirculation (EGR), Evaporation Control Device,	
	Crankcase Blow-by.	
	ENGINE TESTING AND PERFORMANCE: Measurement of Power, Fuel/ Air	5
6	Consumption, Speed etc. Performance Parameters: BHP, IHP, FHP, Mechanical,	
U	Indicated and Brake Thermal Efficiency, Mean Effective Pressure, Charging	
	Efficiency, Volumetric Efficiency, bsfc, isfc, Heat Balance Sheet, Performance Curves	
	SPECIAL TOPICS: Supercharging, Variable Compression Ratio (VCR) Engine, Two	8
	stroke engines, Common Rail Direct Injection (CRDI) Engines, Dual fuel /multi-fuel	
7	engines, Homogeneous charge compression ignition (HCCI) engine, Wankel Engine,	
	Stratified Charge engines, Alternate fuels for IC engines, Hybrid Electric Propulsive	
	System, Comparison of automatic propulsion system.	

Cours	<b>Course Outcomes:</b> By the end of this course, the student will be able to:	
1	Identify the various types of I.C. Engines for a particular application	
2	Select range of operating variables on optimum engine performance.	
3	Select the right choice of different subsystems of an IC engine.	
4	Analyze & Justify the suitability of conventional and non-conventional fuels for IC engines.	
5	Select and modify combustion system integrals to minimize pollution

Course Name	:	CONVECTIVE HEAT AND MASS TRANSFER
Course Code	:	ME2026/ME4026
Credits	•	4
LTP	:	3-1-0

Course Objectives:		
1	To understand basic principles of free and forced convection heat transfer processes.	
2	To be able to formulate and solve convective heat transfer problems.	
3	To be able to evaluate energy requirements for operating a flow system.	
4	To understand the mass transfer processes.	

	Total No. of	Lectures –	- 42
Lecture wise breakup			of
		Lectures	
1	<b>INTRODUCTION:</b> Basics of thermodynamics, Fluid mechanics and heat transfer, Continuity, momentum and energy equations, Reynolds transport theorem, Rules of scale analysis, Concept of heat line visualization.	4	
2	<b>LAMINAR FORCED CONVECTION - EXTERNAL FLOWS:</b> Boundary layer concept, velocity and thermal boundary layer, Governing equations, Similarity solutions, Various wall heating conditions, Flow over sphere, wedge and stagnation flow.	9	
3	<b>LAMINAR FORCED CONVECTION - INTERNAL FLOWS:</b> <i>Fully developed laminar flow</i> : Constant heat flux, Constant wall temperature, Mean temperature, Fully developed temperature and velocity profile, Thermally developing flow and thermal-hydraulical developing flow.	5	
4	<b>EXTERNAL NATURAL CONVECTION:</b> Governing equations for natural convection, Boussinesq approximation, Dimensional analysis, Boundary layer equations, Scale analysis, Low and high Prandtl number fluids, Combined natural and forced convection.	7	
5	<b>INTERNAL NATURAL CONVECTION:</b> Scaling analysis, Natural convection in enclosures: Isothermal and constant heat flux, Side-walls and triangular enclosures, Heated from below, Inclined enclosures, Annular space between horizontal cylinders.	6	
6	<b>TURBULENT BOUNDARY LAYER FLOW:</b> Transaction to turbulent flow, Turbulent flow and its characteristics, Boundary layer equations, Mixing length model, Flow over a single cylinder, Cross-flow over array of cylinders, Natural convection along vertical walls, Turbulent duct flow and Free turbulent flows.	6	
7	<b>MASS TRANSFER:</b> Introduction to mass transfer, Concentrations, velocities and mass fluxes, <i>Governing equations of mass transfer</i> : Species mass balance, constitutive equations, Boundary conditions, Heat and mass transfer analogy, Impermeable surface model, Mass transfer driven flows and Simultaneous heat and mass transfer.	5	

<b>Course Outcomes:</b> By the end of this course, the student will be able to:		
1	Analyze the convective heat transfer processes.	

2	Design the thermal systems based on convective heat transport.
3	Calculate the heat removal /supply requirements in thermal systems.
4	Model the mass transport phenomena in conjunction with the heat transfer.

1	<b>OVERVIEW OF THE DESIGN PROCESS:</b> Philosophy of Engineering Design,	3	
L	Steps involved in the Design Process, S-curves, Challenges of Product Development.		
	<b>PROBLEM DEFINITION:</b> Identifying Customer needs and requirements,	6	
2	Establishing Engineering Characteristics, Quality Function Deployment (QFD),		
	Product Design Specification.		
	FUNCTIONAL DESIGN: Functions in engineering Design, Basics of Function	7	
3	Structure, Functional analysis and its steps, Functional Basis, Functional		
	decomposition and flow.		
4	<b>PRODUCT CONCEPT:</b> Methods of concept generation, Theory of resolution of	8	
-	invention-related tasks (TRIZ), Concept selection and methods of evaluation.		
	EMBODIMENT DESIGN: Product architecture, configuration, parametric design,	8	
5	systems approach and other consideration, Introduction to product metrics, Product		
	evaluation techniques.		
	INDUSTRIAL DESIGN: Aesthetics and ergonomic aspects of product design,	6	
6	Concepts of Value Engineering, Evaluation of function, cost, worth and value, Failure		
	mode and effects analysis.		
7	LEGAL AND ETHICAL ISSUES IN INDUSTRY: Origin of laws, Contracts,	4	
,	Product Liability, Tort Law, Codes of Ethics and solving ethical conflicts.		

Cours	se Outcomes: By the end of this course, the student will be able to:
1	Identify and analyze the product design and development processes.
2	Analyze, evaluate and apply the methodologies for product design, development and management.
3	Undertake a methodical approach to the management of product development to satisfy customer needs.
4	Interpret the legal and ethical issue in product development.

	<b>INTRODUCTION:</b> Fourier and Laplace transforms description of systems,	6	
1	Mathematical Modeling of flow, heat transfer, electrical, pneumatic and vibration		
	systems, Numerical computations and simulations using MATLAB.		
	ANALYSIS OF LINEAR SYSTEMS: Linearization, Linear system, Transfer	7	
	function models, Block diagram representation, Signal flow graph, Transient response		
2	analysis using Laplace transform, First and second order systems and their		
	characteristics, Higher order systems, Steady state error and error constants, Design		
	and performance in time domain.		
	LINEAR FEEDBACK CONTROL SYSTEMS: Characteristics of feedback control	6	
2	systems: Disturbance rejection, sensitivity, Standard feedback controllers: On/off,		
3	Proportional, integral, derivative, PD and PID, Numerical computations using		
	MATLAB.		
	SENSORS AND ACTUATORS FOR CONTROL SYSTEMS: Sensors for	4	
	temperature, pressure, flow and motion control, accelerometers, gyroscope, encoders,		
4	solenoids, potentiometers, Tacho-generator, hydraulic amplifier, DC motor and stepper		
	motors.		
	STABILITY OF CONTROL SYSTEMS: Poles and zeros, complex plane, Routh's	6	
5	criterion, Delay and its influence on control system performance, Frequency response,		
	Bode plots, Nyquist plot, Nyquist stability criterion.		
	CONTROL SYSTEM DESIGN: Root locus method of design, Lead and lag	7	
	compensation, Control system design using Frequency response, Frequency domain		
6	specifications, Gain margin, Phase margin, Correlation of Frequency and time domain		
	specifications, Frequency domain design, Lead and lag compensator design using Bode		
	Plots.		
7	INTRODUCTION TO MODERN CONTROL: State space representation, Pole	6	
/	placement, state observer, Control with state feedback.		

List of experiments	
Students shall be performing modelling and simulation of different engineering problems of	14
system dynamics and control using coding tools in the laboratory.	

Cours	<b>Course Outcomes:</b> By the end of this course, the student will be able to		
1	Derive and apply transfer functions of mechanical systems.		
2	Demonstrate an understanding of feedback control systems.		
3	Apply the principles and methods of modeling the interfaces between rotational-mechanical, translational-mechanical, electrical, fluid, and thermal systems.		
4	Demonstrate the working and application of different type of sensors and actuators.

Course Name	:	TRIBOLOGY AND LUBRICATION
Course Code	••	ME2037/ME3009/ME6009
Credits	••	4
LTP	:	3-1-0

Cours	e Objectives: This course is aimed to	
1	Give exposure to the students about the interaction between the three basic areas of engineering, i.e	
1	friction, wear and lubrication.	
2	Give exposure to complete range of industrial lubricants and their mechanical behavior.	
3	Enable students to design sliding contact and rolling contact bearings.	
Tota	l No. of Lectures – 42	
Sr.	Contents	
No.		
1	<b>SURFACE INTERACTION AND FRICTION:</b> Topography of surfaces, <i>Surface features</i> : properties and measurement, surface interaction, adhesive theory of sliding friction, rolling friction, friction properties of metallic and non-metallic materials, friction in extreme conditions, thermal considerations in sliding contact, concept on geometry for the performance analysis of bearing.	7
2	<b>WEAR AND SURFACE TREATMENT:</b> Types of wears, mechanism of various types of wear, laws of wear, theoretical wear models, wear of metals and non-metals, plastics and ceramics, surface treatments, surface modifications, surface topography measurements, laser methods, instrumentation, international standards in friction and wear measurements.	7
3	<b>LUBRICANTS AND LUBRICATION REGIMES:</b> Lubricants and their physical properties, viscosity and other properties of oils, additives and selection of lubricants, <i>Lubricants Standards</i> : ISO, SAE, AGMA, BIS standards, lubrication regimes, solid lubrication, dry and marginally lubricated contacts, boundary lubrication.	7
4	<b>SELECTION OF BEARINGS:</b> Selection criteria, dry and boundary lubrication bearings, hydrostatic and hydrodynamic bearings, electromagnetic bearings, dry bearings, rolling element bearings, bearings for precision applications, foil bearings, special bearings, selection of plain bearing materials, metallic and non-metallic bearings, tolerance on bearings.	6
5	<b>THEORY OF HYDROSTATIC AND HYDRODYNAMIC LUBRICATION:</b> Reynolds equation, assumptions and limitations, one and two dimensional Reynolds equation, Somerfield boundary conditions, pressure wave, flow, load capacity and friction calculations in hydrodynamic bearings, long and short bearings, pad bearings and journal bearings, squeeze film effects, thermal considerations, hydrostatic bearings & lubrication, design of foil bearings, air bearings.	8
6	HIGH PRESSURE CONTACTS AND ELASTO HYDRODYNAMIC LUBRICATION: Rolling contacts of elastic solids, contact stresses, Hertzian stress,	7

spherical and cylindrical contacts, contact fatigue life, oil film effects, *Elasto Hydrodynamic Lubrication:* Theory of soft and hard elasto hydrodynamic lubrication, Reynolds equation for elasto hydrodynamic lubrication, film shape within and outside contact zones, film thickness and friction calculation, rolling bearings, stresses and deflections, traction drives, internal clearance, shaft and housing fit, mounting arrangements, materials for rolling bearings, manufacturing methods, ceramic bearings, rolling bearing cages bearing seals selection.

Cours	Course Outcomes: By the end of this course, the student will be able to	
1	Apply wear mechanism principles to all kinds of materials and to quantify the same.	
2	Analyze the mechanical behavior of fluids (lubricants) while working between rubbing surfaces under	
	load without causing wear.	
3	Design Journal Ball and Roller Bearings

	BASIC PNEUMATIC AND HYDRAULIC SYSTEMS: Introduction and basic	5	
	elements of fluid power system, their structure, advantages and limitation, Applications		
	of fluid power, pneumatic vs hydraulics control systems, Properties of fluids for		
1	hydraulic systems and governing laws, review of pneumatics in distribution of fluid		
	power, Structure and signal flow of hydraulic and pneumatic system, Basic types and		
	constructions of hydraulic pumps, motors and compressors, Air generation and		
	distribution, Processing elements, Power components.		

2	<b>FLUID ACCESSORIES:</b> Air receiver, after-cooler, Air Dryer, Air Filter, Pressure Regulator, Air Lubricator, Air Service Unit, Pipeline layout, Seals, Hydraulic fluids, Hydraulic reservoir, Hydraulic filter, Hydraulic Accumulator, Intensifier, Pressure gauges and Volume Meters, Lines, Fitting and Connectors, Hydraulic seals.	5
3	ACTUATORS AND OUTPUT DEVICES: Cylinders, Classification of cylinders on the basis of construction, Single and Double acting cylinders, their types, <i>Classification</i> <i>of cylinders on the basis of working Medium</i> : hydraulic and Pneumatic, rod-less cylinders, Cylinder construction, mounting arrangement Construction and working of rotary actuators such as gear, vane, piston and hydraulic motors. Theoretical torque, power, flow-rate, hydraulic motor performance, Symbolic representation of actuators (cylinders and motors), Cylinder performance characteristics, Symbols of Motors, Classification of fluid motors.	5
4	<b>CONTROL ELEMENTS:</b> Classification of the valves, Direction Control valves, Poppet valves, Function of a 3/2-way NC and NO poppet valve, Manual and Mechanical operation of poppet valves, Mini poppet valves, 3/2-way and 5/2-way spool valves, Manual and mechanical operating devices for spool valves, Pneumatic operating devices for the valves, Directly operated solenoid valves, Servo solenoid valves with internal pilot and external pilot, Three-position valves, <i>Blocking valves</i> : Unidirectional, bidirectional, Signal processing valves, Nominal flow rate, Sizing of directional control distribution valves and connecting tubes, Interception valves, Non return, Flow and Pressure valves, Valve combination, Quick exhaust valve, Time delay Valve/Air Timer, Pneumatic Logic Valves, Twin Pressure valve, Shuttle Valve, Symbolic representation.	8
6	<b>DESIGN OF HYDRAULIC CONTROL CIRCUIT:</b> Symbols and description of components, Rules for designing circuits, Control chain, design of circuit diagram, circuit layout, designation of individual elements, Single or semi-automatic cycle, Continuous or automatic cycle, Elementary circuits, Signals generated by limit switches, Hydraulic circuit for control of single acting and double acting cylinder, Speed control in hydraulic circuits, Bleed of circuit, Regenerative circuit, Sequencing circuit, hydraulic circuit for force multiplication, speed control of hydraulic cylinder-metering in, metering out and bleed off circuits, Pilot pressure operated circuits, Hydraulic circuit with accumulator, counter balance valve application, Memory valves, Timer, Cycle start command, Single and continuous cycle, Emergency commandpressure reduction circuit, problems in circuit design.	6
7	<b>DESIGN OF PNEUMATIC CONTROL CIRCUIT:</b> Pneumatic Circuits for control of single acting and double acting cylinder, <i>Simple Pneumatic Control</i> : Direct and indirect actuation pneumatic cylinders, speed control of cylinders, supply air and exhaust air throttling, Circuit with mechanical feedback, Use of flow control valve and Quick exhaust valve, Time delay circuit, Circuit with necessary conditions, Application of Twin pressure and Shuttle valve, <i>Signal Processing Elements</i> : Use of Logic gates, OR and AND gates in pneumatic application, Practical examples involving the use of logic gates, <i>Electro-Pneumatic Control</i> : Principles, signal input and output, pilot assisted solenoid control of directional control valves, use of relay and contactors, Control circuitry for simple signal cylinder application.	7
8	<b>CONTROL SYSTEMS:</b> Open and closed loop control system, Selection and comparison of working and control media, Control Theory, <i>Control system development</i> : Positional sketch, Displacement, step diagram, Control Chart, Function Diagram, Function chart, Circuit diagram, Cascade Design, Steps involved in cascade design, Sign Conventions, Development aspects, Emergency control.	6

Cours	<b>Course Outcomes:</b> By the end of this course, the student will be able to:	
1	Identify and analyze the functional requirements of a fluid power transmission system for a given application.	
2	Visualize how a hydraulic/pneumatic circuit will work to accomplish the desired function.	

3	Design an appropriate hydraulic or pneumatic circuit or combination circuit like electro-hydraulics,
	electro-pneumatics for a given application.
4	Select and size the different components of the circuit.
5	Develop a comprehensive circuit diagram by integrating the components selected for a given
	application.

4	To identify correct DAQ system for recording and analyzing the experimental results.
	Total No. of Lectures – 42

Lecture wise breakup		No. of
		Lectures
1	<b>INTRODUCTION TO EXPERIMENTAL METHODS</b> : Measurement, Instrument, Measurement methods, Generalized measurement system and its functional elements, Classification of instruments, <i>Basic concepts</i> : accuracy, precision, Range, Resolution,	5
	Span, Experiment planning, <i>Analysis of experimental data</i> : Error Analysis, Evaluation of and propagation of uncertainties; Regression analysis, Calibration of instruments.	
2	<b>INSTRUMENT CHARACTERISTICS:</b> Introduction, Static terms and characteristics, Dynamic terms and characteristics, Standard test-inputs, Zero, first and second order instruments, Response of first and second order system.	4
3	<b>FLOW MEASUREMENT AND VISUALIZATION</b> : Positive-displacement methods, Flow-obstruction methods, Sonic nozzle, Flow measurement by drag effects, Pressure probes, Hot-wire and hot-film anemometers, Magnetic flow meters, <i>Flow visualization methods</i> : Smoke methods, Shadowgraph, Schlieren photography, Laser Doppler anemometer, Laser-induced fluorescence, Particle image velocimetry.	10
4	<b>TEMPERATURE MEASUREMENT</b> : Temperature scales, Ideal-gas thermometer, Temperature measurement by mechanical and electrical effects, Temperature measurement by radiation, Transient response of thermal systems, Thermocouple compensation, Temperature measuring problems in flowing fluids, Dynamic compensation, Field temperature measurement using infrared camera.	10
5	<b>TRANSPORT-PROPERTY MEASUREMENT:</b> Measurement of thermal conductivity, Measurement of viscosity, Gas diffusion calorimetry, Convection heat transfer measurement, Humidity measurement, PH measurement, <i>Thermal-radiation measurements</i> : Emissivity measurement, Reflectivity and transmissivity measurement, Air pollution sampling and measurement, Gas sampling techniques, Combustion products measurement.	8
6	<b>DAQ AND SIGNAL ANALYSIS:</b> Systems for data acquisition and processing, Modules and computerized data system, Selection criteria for choosing a DAQ system, Digitization rate, Time and frequency domain representation of signals, Nyquist criterion, Techniques for signal analysis, <i>Signal conditioners:</i> Filters, low, high, band pass and amplifiers.	5

Course Outcomes: By the end of this course, the student will be able to:				
1	Apply basic concepts of measurement system with confidence.			
2	Identify and minimize the error and uncertainty in the experimental data.			
3	Employ different measurement devices in real-time system to correctly measure the parameters of			

	interest.
4	Select the suitable DAQ system for recording of the experimental data.

Course Name	:	NUMERICAL ANALYSIS TECHNIQUES
Course Code	:	ME2045/ME3017/ME6017
Credits	:	4
LTP	:	3-1-0

Cou	Course Objectives:					
1	To understand the linkage between accuracy, stability, and convergence.					
2	To perform error analysis for arithmetic operations.					
3	To gain the basic understanding of numerical algorithms and its implementation.					
4	To understand the propagation of errors through numerical algorithms.					
	Total No. of Lectures – 42					

Lecture wise breakup			
1	<b>INTRODUCTION:</b> <i>Mathematical Preliminaries and Error Analysis:</i> Review of Calculus, Round-off Errors and Computer Arithmetic, Algorithms and Convergence, Numerical Software, <i>Solution of Equations in Single Variable:</i> Bisection Method, Fixed-Point Iteration, Newton's Method and its Extensions, Error Analysis for Iterative Methods, Accelerating Convergence, Zeros of Polynomials and Muller's Method, <i>Interpolation and Polynomial Approximation:</i> Interpolation and the	10	

	Lagrange Polynomial, Data Approximation and Neville's Method, Divided Differences, Hermite Interpolation, Cubic Spline Interpolation, Parametric Curves.	
2	<b>NUMERICAL DIFFERENTIATION AND INTEGRATION:</b> Numerical Differentiation, Richardson's Extrapolation, Elements of Numerical Integration, Composite Numerical Integration, Romberg Integration, Adaptive Quadrature Methods, Gaussian Quadrature, Multiple Integrals, Improper Integrals.	4
3	<b>INITIAL-VALUE PROBLEMS:</b> Euler's Method, Higher-Order Taylor Methods, Runge-Kutta Methods, Error Control and Runge-Kutta-Fehlberg Method, Multistep Methods, Variable Step-Size Multistep Methods, Extrapolation Methods, Higher- Order Equations and Systems of Differential Equations, Stability, <i>Direct and</i> <i>Iterative Methods:</i> Linear Systems of Equations, Pivoting Strategies, Linear Algebra and Matrix Inversion, Determinant of a Matrix, Matrix Factorization, Special Types of Matrices, Norms of Vectors and Matrices, Eigen values and Eigenvectors, Jacobi and Gauss-Siedel Iterative Techniques, Relaxation Techniques for Solving Linear Systems, Error Bounds and Iterative Refinement, Conjugate Gradient Method.	12
4	<b>APPROXIMATION THEORY:</b> Discrete Least Squares Approximation, Orthogonal Polynomials and Least Squares Approximation, Chebyshev Polynomials, Rational Function Approximation, Trigonometric Polynomial Approximation, Fast Fourier Transforms, <i>Approximating Eigen values:</i> Linear Algebra and Eigen values, Orthogonal Matrices and Similarity Transformations, Power Method, Householder's Method, QR Algorithm, Singular Value Decomposition.	8
5	<b>NONLINEAR SYSTEM OF EQUATIONS:</b> Fixed Points for Functions of Several Variables, Newton's Method, Quasi-Newton Methods, Steepest Descent Techniques, Homotopy and Continuation Methods, <i>Boundary-Value Problems:</i> Shooting, Rayleigh-Ritz and Finite-Difference Methods for Linear and Nonlinear Equations, <i>Partial Differential Equations:</i> Elliptic, Parabolic and Hyperbolic Partial Differential Equations.	8

Course Outcomes: At the end of this course, the student will be able to					
1	Develop an understanding of the core ideas and concepts of numerical methods.				
2	Recognize the power of abstraction and generalization and also to carry out investigative mathematical work with independent judgment.				
3	Apply rigorous, analytic, highly numeric approach to solve problems using numerical methods.				
4	Communicate problem solutions with correct mathematical terminology.

Course Name	:	THERMAL MANAGEMENT OF BUILDINGS
Course Code	:	ME2046/ME3018/ME6018
Credits	:	4
LTP	:	3-0-2

Course Objectives:		
1	To understand the principles of energy flow diagram and energy auditing in buildings.	
2	To understand the thermal performance and thermal comfort in buildings via simulations.	
3	To understand the energy conservation buildings codes and rating systems.	

Total No. of Lectures – 42

Lecture w	vise breakup	No. of Lectures
1	<b>INTRODUCTION:</b> Energy management concept in building, Energy auditing in buildings, Bio-climatic classification of India, Climate Analysis for Nat-Vent Buildings, Mixed Mode Buildings and Conditioned building, Passive design concepts for various climatic zones, Case studies on selected building designs.	6
2	<b>VERNACULAR ARCHITECTURE:</b> Vernacular architecture in Indian Context, Factors affecting architecture, building material and construction techniques, Case studies on vernacular architecture, Low cost buildings, climate responsive buildings, energy efficient buildings, green buildings, intelligent buildings, Building Integrated Photovoltaic's (BIPV), Green Buildings in India and Case studies.	8
3	<b>BUILDING CODES AND RATING SYSTEMS:</b> LEED, GRIHA, ECBC, Thermal properties and energy content of building materials, Building energy simulation, Simulation tool like Energy plus, ESP-r, Open studio, Building management systems and automation, Artificial and day lighting in buildings.	8
4	<b>THERMAL PERFORMANCE STUDIES:</b> Concept of comfort and neutral temperatures, Thermal comfort, PMV-PPD models, Thermal comfort models, Adaptive thermal comfort models, case studies.	6
5	<b>HEAT FLOW CALCULATIONS IN BUILDINGS:</b> Unsteady heat flows through walls, roof and windows, Concept of sol-air temperature and its significance, heat gain through building envelope, building orientation, shading and overhangs, Ventilation and Air-conditioning systems.	7
6	<b>PASSIVE HEATING CONCEPTS:</b> Passive and low energy concepts, Applications, Direct heat gain, indirect heat gain, isolated gain and sunspaces, <i>Passive cooling concepts</i> : Evaporative cooling, Radiative cooling, Application of wind, water and earth for cooling, Shading, paints and cavity walls for cooling, Roof radiation traps, Earth air-tunnel.	7

## **Experiments:**

Simulation of different building designs for effective thermal management will be performed 28 using Energy plus, ESP-r, Open studio, etc.

Course Outcomes: At the end of this course, the student will be able to		
1	Apply simulation programs of buildings to perform energy calculations for indoor comfort.	
2	Evaluate and justify energy-saving measures in existing buildings.	

3	Apply energy efficient measures on grounds of engineering and economic feasibility.
4	Identify environmental aspects of renovation and building's energy supply from a system perspective.

Course Name	:	RELIABILITY AND MAINTENANCE ENGINEERING
<b>Course Code</b>	:	ME2049/ME3021/ME6021
Credits	:	4
LTP	:	3-1-0

**Course Objectives:** To impart the knowledge

1.On the role and contribution of maintenance towards achieving competitive advantage in the industries. 2.About the key concepts and issues of maintenance in both manufacturing and service organization.

3. About the various strategies, philosophy, scheme and schedules of maintenance engineering and it applications in the industry.

4. About the safety, housekeeping, breakdown, availability and reliability indices of engineering system.

	Total No. of Lec	tures – 42
Lectu	Lecture wise breakup	
		Lectures
1	<b>INTRODUCTION:</b> Concept, classification and types of maintenance, preventive, corrective, renovative, planned, breakdown and quality maintenance; objectives and characteristics of maintenance function, organizational set-up and record keeping, Organizational hierarchy, position and responsibilities of maintenance department, control and coordination in maintenance, benefits and effects of maintenance.	6

	MAINTENANCE PLANNING AND SPARE PARTS MANAGEMENT: Long and	
2	short term planning and scheduling; man power planning, training and allocation, requirement planning of raw materials and spare parts, inventory control of spare parts, ABC analysis, FSN Approach, XYZ approach, VED approach, Estimation of maintenance work and monitoring.	5
3	<b>HOUSEKEEPING AND SAFETY IN MAINTENANCE</b> : Factors governing housekeeping, illumination, layout and equipment, air distribution, pollution and ventilation, training and awareness in housekeeping; <i>Safety</i> : Classification and types of hazards, important factors and measurement of hazards, minimize hazards and control of accidents, fault tree analysis, safety devices and cheek list.	5
4	<b>RELIABILITY AND AVAILABILITY OF ENGINEERING SYSTEMS:</b> Reliability and maintainability, failure, Bathtub hazard rate concept; <i>Reliability structures</i> : series, parallel, combination of series and parallel, redundancy; Quantitative estimation of reliability of parts, mean time to failure (MTTF), mean time between failure (MTBF), mean time to repair (MTTR), accuracy and confidence of reliability estimation, statistical estimation of reliability indices, machine failure pattern: breakdown time distribution, machine failure patter.	6
5	<b>MAINTENANCE OF DRIVES AND EQUIPMENTS:</b> <i>Mechanical drives and equipment's:</i> belts, chains, gears, couplings, brakes and their drives; pumps, compressors, blowers, air-conditioners; <i>Electrical circuits and equipment's:</i> power cable, line and circuit connection, switchboard, fuse, relays, interlocks, contactors, measuring equipment's, motors, generators; essential care and maintenance; <i>Lubrication:</i> manual, forced and oil bath lubrication, testing, additives used, rectification and re-use of lubricants; <i>Corrosion:</i> factors influencing and effect of pH value on corrosion, testing, prevention, application of inhibitors and control techniques;	5
6	<b>INSPECTION, TESTING, QUALITY CONTROL AND AUDIT IN</b> <b>MAINTENANCE</b> : <i>Inspection:</i> objectives, interval, card history and report; <i>Testing:</i> non- destructive, destructive and semi-destructive testing; liquid penetration test, magnetic particle test, ultrasound test, vibration analysis, oil analysis, eddy current testing; <i>Quality</i> <i>Control:</i> importance, application of statistical quality control tools and techniques; <i>Performance and audit:</i> Maintenance performance indices-BPI, EQBI, MEI, BAI, MUI, EURRI, BEI; function and operational audit, plan and programme audit.	5
7	<b>FAULT DIAGNOSIS AND CONDITION MONITORING</b> : Objectives, methods and purpose of faults diagnosis and condition monitoring, non-vibration and vibration based monitoring; periodic and continuous monitoring methods and equipment's used; fault diagnosis and condition monitoring of bearings; computerized trouble shooting and condition Monitoring;	5
8	<b>BUDGET AND COST ESTINATION OF MAIANTENANCE</b> : <i>Cost estimation:</i> life cycle cost, machine breakdown cost, repair cost; spare parts and labour cost; impact of maintenance cost, <i>Incentive Payment:</i> objectives, financial, non-financial and semi financial incentive of maintenance staff, different types of incentive plans for maintenance staff; <i>Budget:</i> objectives and functions of budget in maintenance.	5

Cours	<b>Course Outcomes:</b> At the end of this course, the student will be able to:		
1	Perform the strategic role of Maintenance/Reliability engineering for optimization of life cycle.		
2	Apply analytical skills and problem-solving tools/techniques to the fault analysis of various machines		
	and equipment's.		
3	Practice safe work procedures and understanding other safety regulations in troubleshoot typical		
	industrial mechanical systems

	method.	
3	STATISTICAL QUALITY CONTROL: Inspection and quality control, statistical quality	8
	control, statistical process control, sampling plans and control charts for variables and	
	attributes, economics of sampling charts.	
4	QUALITY CONCEPTS: Quality Assurance, Total Quality Control, Total quality concept,	4
	Deming's 14 points.	
5	TOTAL QUALITY MANAGEMENT: Concept, quality planning and improvement, quality	6
	team and circles, just in time (JIT).	
6	QUALITY STANDARDS: Definition, applications, implementation procedure and	6
	requirements of Quality, ISO 9001, ISO 9002, ISO 9003, ISO 9004, ISO 14000, ISO 27000,	
	ISO 31000, Quality standards.	
7	QUALITY & RELIABILITY: Product quality and reliability, failure data analysis and life	6
	testing, redundancy in design.	
8	SIX SIGMA: Concept, definition, procedure and applications, TQM and six sigma, Indian	4
	industries, certification, process capabilities and case studies.	

**Course Outcomes:** At the end of this course, the students will be able to:

1	Apply the basic concepts of Quality & Quality standards in industries.
2	Improve the various aspects of process capabilities.
3	Implement the control charts for various industrial applications.
4	Apply the concepts of Six Sigma in TQM and Reliability.

Course Name	:	MICRO AND NANO MANUFACTURING
Course Code	:	ME2052/ME3024/ME6024
Credits	:	4
LTP	:	3-0-2

#### **Course Objectives:**

1. To give awareness of different techniques used in micro and nano manufacturing

2. To give in-depth idea about the measurement and metrology tools used in micro and nano manufacturing

3. To impart the knowledge about non-conventional micro and nano domain finishing approaches

4. To impart the knowledge about micro mechatronics and micro joining.

	Total No. of Lectures – 4		
Lecture wise breakup			
		Lectures	
1	<b>CONCEPT OF MICRO ENGINEERING:</b> Introduction to precision engineering, macro milling, micro drilling, Micro-electromechanical systems, merits and applications, Micro phenomenon in electro-photography, applications; Introduction to bulk micromachining, Surface micromachining steps, Micro instrumentation and applications, Micro mechatronics, Concept of Nano finishing and nano-level finishing techniques.	6	
2	<b>MICRO-ENERGY AND CHEMICAL SYSTEM (MECS):</b> Introduction, Space micro-propulsion, <i>e-Beam nanolithography:</i> important techniques and applications, Introduction to nanotechnology, Carbon nano-tubes: properties and structures, Molecular logic gates and Nano level Biosensors, applications,	5	
3	<b>MECHANICAL MICROMACHINING</b> : Principle, Micro drilling-process, tools and applications, Diamond micro turning process, tools and applications, <i>Micro milling and grinding</i> : principle, process characteristics, tools and applications, <i>Micro extrusion</i> : process and applications, micro bending with Laser, Nano plastic forming and Roller imprinting.	5	
4	<b>NON-CONVENTIONAL MICRO-NANO MANUFACTURING</b> : Different processes, principle and applications, Abrasive jet micro machining, WAJMM, Micro EDM, Micro WEDM, Micro EBM: process principle, description and applications, Micro ECM, Micro LBM: process principle, description and applications, principle of Focused ion beams and applications, hybrid techniques applied to nano-domain non-conventional manufacturing.	6	

5	<b>MICRO AND NANO FINISHING:</b> Different processes, Magneto rheological finishing, Magneto rheological abrasive flow finishing, process principle and applications, Force analysis of MRAFF process, Magneto rheological jet finishing processes, Working principle and polishing performance of MR jet machine, Elastic emission machining (EEM), machine description, applications, <i>Ion Beam Machining (IBM)</i> : principle, mechanism of material removal, applications, <i>Chemical Mechanical Polishing (CMP)</i> : Schematic diagram, principle and applications.	4
6	<b>MICRO FABRICATION:</b> Techniques, flowchart, Introduction to Nanofabrication, Top-down and top-up approach, dry and wet itching, micro-deposition and surface modification, <i>Nanofabrication using soft lithography</i> : principle, applications, Examples (Field Effect Transistor, Elastic Stamp), <i>Manipulative techniques</i> : process principle, applications, <i>Carbon nano materials</i> : CN Tubes, properties and applications, <i>CN Tube Transistors</i> : Description only, Diamond properties and applications, CVD Diamond Technology, LIGA Process.	8
7	<b>MICRO WELDING AND ANALYSIS</b> : Laser welding, description and applications, Defects, <i>Electron Beam Micro-welding</i> : Description and applications, Introduction to micro and nano measurement, defining the scale, uncertainty, SEM and XRD of micro- welded joints, Scanning White-light Interferometry, Optical Microscopy, Scanning Probe Microscopy, Scanning Tunneling Microscopy and Confocal Microscopy as applied to micro-welding analysis, Introduction to Online-Machine Metrology.	8

List of practical's / mini-projects H		
1	Experiments on Micro EDM and analysis of accuracy & precision of the machined surface.	6
2	Mini project on MEMS.	10
3	Micro gear cutting and analysis of accuracy-clamping & setting errors.	6
4	Grinding- analysis of thermal effects.	6

Cou	Course Outcomes: Students will be able to			
1	Apply different techniques used in micro and nano manufacturing.			
2	Get in-depth idea of the conventional techniques used in micro manufacturing.			
3	Apply non-conventional micro-nano manufacturing and finishing approaches.			
4	Implement different techniques in micro joining and analysis.

Leetu	ie wise breakup	Lectures
1	<b>AUTOMATION:</b> Concepts, Need and Demand of automation, Current and future Trends, Components of Industrial Automation System and their functionalities, Levels and Types of Automation, Mechanization vs Automation, strategies of automation, Current emphasis in automation.	6
2	<b>AUTOMATION CONTROLLERS:</b> Introduction of Industrial Controllers, <i>Programmable Logic Controller</i> : Constructions, Types, Programming Units, Memory, I/O Modules, Programming methodology, Ladder Logic programming and diagrams, timers, internal relays and counters, data handling, analogue input and output. Application on real time industrial automation systems.	6
3	<b>LOGIC CONTROL CIRCUITS FOR HYDRAULICS AND PNEUMATICS:</b> Basic elements of hydraulics and pneumatics, fluid power control elements and standard graphical symbols, hydraulic & pneumatic cylinders and valves for pressure, flow & direction control, Circuit design approach and real time examples, sequence operation of two and more than two cylinders, Hydraulic and pneumatic safety and their applications in clamping, traversing and releasing operations.	6
4	<b>INDUSTRIAL CONTROL SYSTEM:</b> Process versus discrete manufacturing, continuous versus discrete control, computer process control, forms of computer process control, closed loop versus open loop control, design of control systems, levels of automation in industries, variables and parameters in industries.	6
5	<b>ELECTRICAL AND ELECTRONIC CONTROL:</b> Sensor Terminology, classification of sensor and transducer, their selection, temperature, light, position, piezoelectric, pressure and vision sensors, acoustic emission sensing techniques, microprocessor, microcontroller.	6
6	<b>FACTORY AUTOMATION:</b> Fundamentals of production lines, types of assembly lines, reasons for using automated assembly lines, transfer systems in assembly lines, automatic machines, transfer devices and machines, selection of transfer devices, linear and rotary transfer mechanism, classification, conveyors, <i>Feeders</i> : classification, selection criterion, feeding devices, <i>Types of feeders</i> : reciprocating, vibratory, screw, rotary, centrifugal, flexible, Automated guided vehicles.	6
7	<b>MATERIAL HANDLING SYSTEMS AND DESIGN</b> : Introduction to Material Handling, Material Transport Equipment, analysis of Material Transport Systems, Storage systems, Storage System Performance and Location Strategies, Conventional Storage Methods and Equipment, Automation Storage Systems, Engineering Analysis of Storage Systems.	6

Sr.	Experiments	Hours
No.		
1	Students in a group will carry out projects on design and implementation of an automatic modular system which can be useful in contemporary automation industries. The methodologies will be followed the design and simulation of automated systems using software and implementation via pneumatic controls, electro-pneumatic controls, PLC and motion controls in Simens CoE Labs, PEC, Chandigarh.	28

Course Outcomes: By the end of this course, the student will be able to:		
1	Apply the principles, strategies and advantages of industrial automation.	
2	Select the various level of automation and calculate manpower requirement.	
3	Design material handling and material storage systems for an automated factory.	

4	Automate shop floor controls and part/device identification methods
5	Design and simulate a system or process to meet desired requirements of automation within realistic constraints of various logic circuits on software and the same can be applied to automate the different processes in contemporary industry systems

Course Name	:	MANUFACTURING TECHNOLOGY-I
<b>Course Code</b>	••	ME5001
Credits	••	4
LTP	••	3-0-2

#### **Course Objectives:**

1. To familiarize the students with the basic tools and equipment's used in manufacturing.

- 2. To introduce the practical knowledge on different aspects of manufacturing processes.
- 3. To familiarize with basic manufacturing processes, techniques, use of machine & tools etc.
- 4. To familiarize with the production of basic raw materials and secondary processes like joining, forming, assembly.

Total No. of Lectures -		Lectures – 42
Lectu	re wise breakup	No. of Lectures
1	<b>MANUFACTURING</b> : Definition, Classification, Concept of product design and development, Plant and shop layout, Manufacturing activities inside and outside the factory, Industrial safety, Selection of raw materials, Storing, Process planning.	6
2	<b>FOUNDRY:</b> <i>Raw materials</i> : fuels, fluxes, refractory and related materials, patterns, mould, core; <i>Furnaces</i> : Cupola, induction and resistance heating furnaces, core furnace, open hearth furnace, pit furnace, Sand casting, Mechanics of solidifications; <i>Design:</i> Gating system, runner and riser; Pouring time calculation, Degassing, Fettling; <i>Special Castings</i> : Centrifugal, carbon dioxide, plaster, shell and permanent moulding, precision casting, investment casting, die casting, Continuous casting; <i>Casting of composites:</i> Casting Al/SiC, Al/ZrO2, Al/Al2O3 and hybrid MMCs, properties and applications. <i>Casting defects:</i> Causes and their remedial actions.	10
3	<b>METAL FORMING</b> : Classification, hot and cold working processes, Types: coining, embossing, punching, blanking, rolling, forging, fullering, edging extrusion, drawing, <i>Special forming processes:</i> rotary swaging, ring rolling, gear forming, tandem rolling, thread rolling, bearing cup, spline shaft rolling, electro, hydraulic, magneto-electro and hybrid forming; <i>Forming defects</i> : Causes and remedial actions.	8
4	<b>WELDING:</b> Definition, classification, mechanism of welding, weldability. <i>Arc</i> <i>welding</i> : principle, types, Carbon, submerged, electro-slag, MIG, TIG and plasma arc welding. <i>Electrodes</i> : Types, classification and codification, selection and specific applications. <i>Resistance welding</i> : Principle, types, Spot-welding machines. <i>Solid state welding</i> : Cold, diffusion, ultrasonic, explosive, friction and forge welding. <i>Thermochemical welding</i> : Principle, types, applications. <i>Gas welding</i> : Types, different zone and temperature of flames, applications. Oxy-flame cutting: Principle, types, applications. <i>Brazing and soldering</i> : Principle, types, materials, application in macro and micro domain, <i>Welding defects</i> : Causes and remedial actions.	10
5	<b>HEAT TREATMENT:</b> Definition, classification, annealing, normalizing, hardening and tempering; Iron-carbon and TTT diagram, <i>Surface hardening processes</i> : carburizing, nitiriding, cyaniding and flame hardening, heat treatment processes for non-ferrous metals.	8

List	List of Experiments:		
1	Carpentry section: (i) half lap T & L-joint, (ii) pattern of hexagonal nut.		
2	Fitting section: (i) leveling & surface marking, (ii) square hole making.		
3	Foundry section: (i) mould making, (ii) casting hexagonal nut.		
4	Smithy section: (i) round bar to cube, (ii) round bar to V-block.		

5	Welding section: (i) arc welding: V, L,T joints, (ii) spot welding on sheet metal.
6	Machine section: (i) turning & tapering, (ii) thread cutting.
7	Assembly and electrical basic connection: (i) study automobile engine, (ii) wiring & electrical
	connection.
8	Sheet metal & Electroplating: (i) bending & joining, (ii) buffing and electroplating on sheet metal

<b>Course Outcomes:</b> Students will be able to				
1	Clear the basic concepts of machine tools, tools and other equipment's.			
2	Realize the important and their actual applications in manufacturing			
3	Come up with innovative conceptual idea about manufacturing processes and their industrial			
	applications

## **GROUIP-B**

Course Name	:	FUNDAMENTALS OF THERMO-FLUIDICS
Course Code		ME5003
Credits	:	4
LTP	:	3-1/2-2/2

Course Objectives:	
1	To understand the importance of thermodynamics and fluid mechanics.
2	To understand the basics of thermodynamic systems and their applications.
3	To understand statics, dynamics and various approaches to fluid mechanics.
4	To correlate fundamentals of fluid mechanics with various mechanical systems.

Total No. of Lectures			- 42
Lect	ture wise breakup	No.	of
		Lectur	es
1	<b>Basics and First Law of Thermodynamics:</b> Concept of Continuum, Thermodynamic System, Surrounding and Boundary, Thermodynamic Equilibrium, State, Path, Process, cycle, Quasi-static Process, Reversible and Irreversible Process, Working Substance, Thermodynamic Properties, Zeroth Law, Temperature Scales, Concept of Heat and work, First Law thermodynamics for closed and open systems, Enthalpy, Energy of an isolated System, Control Volume, Work and Energy Equations,	9	
2	<b>Second Law of Thermodynamics:</b> Energy Analysis of Heat Engine, Refrigerator and Heat Pump, Reversibility and Irreversibility, Carnot Theorem and Carnot cycle, Equality of Ideal Gas Temperature and Kelvin Temperature. <i>Entropy:</i> Clausius Theorem and Clausius Inequality Principle of Entropy Increase, Applications to closed and open System, Entropy and disorder.	7	
3	<b>Power Cycles:</b> Air Standard Cycles: Equation of state of a gas, Properties of Mixture of gases, Otto, Diesel, Dual, and Brayton Cycles, Comparison of cycles. <i>P-v, T-s, h-s,</i> diagram for a Pure Substances (with special reference to water), Use of Steam Table and Mollier Diagram, <i>Vapor Cycles</i> : Carnot and Rankine Steam Power Cycle, Actual Vapour cycle Processes, Comparison of Carnot and Rankine cycle, Mean Temperature of Heat Addition.	5	
4	<b>Fluid Statics and Kinematics:</b> <i>Basics:</i> Properties of Fluid, Viscosity, Capillarity, Surface Tension, Compressibility, Normal and Shear Stresses in Fluid Flows. <i>Fluid Static:</i> Mechanics of Fluid at Rest and in Rigid Body Motion, Manometry, Hydrostatic Forces on Fully and Partially Submerged Bodies, Stability of a Floating Body, <i>Fluid Kinematics:</i> Langrangian and Eulerian Methods, Local and Convective Acceleration, Streamlines, Path Lines, Streak Lines, Acceleration and Rotation of a Fluid Particle, Vorticity and Circulation, Stream Function, Frictionless and Irrotational Flow, Velocity Potential Function.	9	
5	<b>Dynamics of Fluid Flow:</b> Reynolds Transport Theorem, Equation of Conservation of Mass, Differential Form of Continuity Equation, Navier-Stokes Equations, Euler's Equation of Motion, Frictionless Flow - Bernoulli's Equation, Angular Momentum Theorem, Applications to Flow Measurement and other Real Flow Problems.	7	
6	<b>Viscous Flow:</b> Regimes of Flow, Pressure Gradient in Steady Uniform Flow, Qualitative Aspects of Viscous Flows, Exact solutions of Navier-Stokes Equations, Laminar Flow Through a Pipe - Hagen-Poiseulli's Flow, Transition from Laminar to Turbulent Flow, Turbulent Flow Through a Pipe, Friction Factor, Applications to Pipe Networks. <i>Flow Past Immersed Bodies:</i> Reynolds Number and Geometry Effects, Momentum Integral Estimates, Boundary Layer Equations, Flow Over a Flat-Plate Boundary Layer, Boundary Layers with Pressure Gradients.	5	

List of Experiments:		No. of Turns
1	To determine the metacentric height of a given vessel under unloaded condition.	1

2	Verification of Bernoulli's theorem.	1
3	To measure the velocity of flow using Pitot tube.	1
4	To determine the Coefficient of discharge through Venturi meter.	1
5	To determine the Coefficient of discharge through Orifice meter.	1
6	To determine the different types of flow Patterns by Reynolds's experiment.	1
7	To determine the Friction factor and loss coefficients for the different pipes.	1

Course Outcomes: By the end of this course, the student will be able to:	
1	Apply laws of thermodynamics to a wide range of systems.
2	Quantify and analyze the efficiencies of various engineering devices.
3	Apply the principles of fluid statics and dynamics to real life problems.
4	Correlate fundamentals of fluid mechanics with various mechanical systems

3	To determine thermal conductivity of composite wall	1
4	To determine thermal conductance of heat pipe & compare it with other metal rods.	1
5	To determine thermal conductivity of insulator specimen by guarded hot plate method	1
6	To determine heat- transfer coefficient in natural convection	1
7	To study heat transfer from a pin-fin in natural & forced convection mode	1
8	To determine heat - transfer coefficient in forced convection.	1
9	To find heat transfer coefficient for drop-wise and film-wise condensation process	1
10	To determine overall heat transfer coefficient & compare it with value obtained from standard correlation	1
11	Study of CHF & pool-boiling	1
12	To determine effectiveness of parallel/counter flow heat exchange	1
13	To determine Stefan Boltzmann constant of radiation heat transfer.	1
14	To determine the emissivity of a non-black surface	1

Course Outcomes: By the end of this course, the student will be able to:		
1	Apply basic concepts of heat transfer.	
2	Develop problem solving skills of heat transfer devices.	
3	Apply scientific and engineering principles to analyze and design thermal systems.	

Suggested Books:			
Sr. No.	Name of Book/ Authors/ Publisher	Year of Publication/ Reprint	
1	Heat and Mass Transfer: Fundamentals and Applications (SIE), Yunus A Cengel; Afshin J. Ghajar, McGraw Hill Education; 5 <sup>th</sup> edition	2017	
2	Fundamentals of Heat and Mass Transfer, Incropera, Dewitt, Wiley India Edition.	2018	
3	Engineering Heat Transfer, R.C. Sachdeva, New Age	2012	
4	Heat Transfer, J.P. Holman, Mc Graw Hill	2014	
5	Engineering Heat and Mass Transfer, M.M. Rathor, University Science Press	2015	
6	Fundamentals of Heat & Mass Transfer, C. P. Kothandaraman, New Age	2012	
## **GROUIP-C**

Course Name	:	STRENGTH OF MATERIALS & CONCEPTS OF DESIGN
Course Code	:	ME5005
Credits	:	4
LTP	:	3-1/2-2/2

## **Course Objectives:**

At the end of this course, the student should be able to understand the basic philosophies of strength of material and designing of a system. The course will prepare the students to apply these to engineering and applied sciences problems.

Total No. of Lectures –			
Lectu	re wise breakup	Number Lectures	of
1	<b>INTRODUCTION:</b> Equations of static equilibrium, Concept of various forces/loads, stresses and strains developed due to these forces/loads, Uniaxial tensile test, Stress-strain diagrams for various types of ferrous and non-ferrous materials, isotropic and anisotropic materials, Compression test, impact test, fatigue test, hardness test, torsion and bending test as per ASTM standards.	4	
2	<b>SIMPLE &amp; COMPOUND STRESSES:</b> Concept of stresses and strains, relationship between elastic constants, stresses produced in compound and simple bars due to axial loading, Generalized 2-D state of stress, stresses on an arbitrary plane under Generalized 2-D state of stress, principal stresses and principal planes, Mohr's stress circle and ellipse of stress	6	
3	<b>SHEAR FORCE AND BENDING MOMENT IN BEAMS:</b> Shear force (SF), Bending moment (BM), Relation between rate of loading (w) with shear force (SF) and bending moment (BM). SF and BM diagrams of cantilevers, simply sported beams with or without overhang under different types of loading e.g. concentrate loads, uniformly distributed load, uniformly varying load, moment or its combinations	5	
4	<b>BENDING AND SHEAR STRESSES IN BEAMS</b> : Theory of pure bending, Bending equation, Bending stresses in various cross-sectional beams under different loads, shear stresses in beams, variation of shear stresses in different cross-sectional beams	6	
5	<b>GENERAL DESIGN CONSIDERATION:</b> Scope and meaning of design with special reference to machine design, design process, Concept of tearing, bearing, shearing, crushing, bending, Selection of materials, Factors of safety under different loading conditions, stress-concentration factors, Design stresses for variable and repeated loads. Endurance limit, fatigue. Fits and tolerances and finish	5	
6	<b>FASTENERS:</b> Cotters and cotter joints, pin fasteners knuckle joints, Screws, bolts, preloaded bolts, bolts subjected to shear, tension and torque, eccentrically loaded bolted joints, Welded and riveted connection, eccentrically loaded, welded and riveted connections.	8	
7	SHAFTS AND AXLES: Torsion and its equation for circular shafts, determination of principal stresses and maximum shear stresses in circular hallow and solid shaft due to combined bending and torsion, application of torsional concepts in Shafts & Axles, Keys, Design of Rigid & flexible Coupling	8	

List of Experiments:		Number Turns	of
1	To perform Tensile Test on a given material and to determine its various mechanical properties under tensile loading.		
2	To perform Compressive and shear test on a given material and to determine its various mechanical properties under compression loading.	1	
3	To perform Torsion test on a given material and to determine various mechanical properties under torsional load.	1	
4	To perform Bending test and to determine the Young's Modulus of Elasticity of the beam via deflection formulae.	1	
5 To determine Rockwell hardness of a given material.		1	
6	To perform Impact test on a given material and to determine its resilience.	1	

7	To study and perform Fatigue test on a given material and to determine endurance strength and limit of the material.	1
Course Outcomes: By the end of this course, the student will be able to:		
1	Apply strength of material & design philosophies in designing of simple systems.	
2	Visualize any mechanical system as a model acted upon by various loads and stresses induced i	in it

2 Visualize any mechanical system as a model acted upon by various loads and stresses induced in it.

3 Carry out the experiment on a given material to determine its various mechanical properties.

## Suggested Books:

Sr. No.	Name of Book/ Authors/ Publisher	Year of Publication/ Reprint
1	Strength of Material - G. H. Ryder (MacMillan)	1969
2	An Introduction to the Mechanics of Solids - Crandall & Dahl (Mc-Graw Hill)	2012
3	Engg. Mechanics of Solids - E. P. Popav (Pearson Education)	2003
4	Strength of Material: D S Bedi, Khanna Publishing, 6th edition	2019
5	Strength of Material by R K Rajput, S Chand	2012

Course Name	:	KINEMATICS AND DYNAMICS OF MACHINES
Course Code	••	ME5006
Credits	••	4
LTP	:	3 -1/2- 2/2

**Course Objectives:** In this course, the student should be able to

1. Understand the basics of machines and mechanism.

2. Understand the concepts of kinematic diagrams, kinematic chains & mobility, mechanisms and Kinematic analysis.

-

. . .

3. Understand various components used in power transmission devices.

	Total No. of J	Lectures – 42
Lecture wise breakup		No. of
	-	Lectures
	BASIC CONCEPTS: Kinematics and Dynamics of Machines, Mechanisms, Pairs,	
1	kinematic chain, four bar chain, Inversions of single and double slider crank chains,	4
	Degrees of freedom, Kutzbach's equation. Grubler's criterion, Joints	
	<b>VELOCITY AND ACCELERATION:</b> Relative motion, displacement, velocity,	
	acceleration diagrams of different types of mechanisms, Relative velocity method,	C C
2	instantaneous center method; Kennedy theorem, Klien's construction, Coriolis	6
	component, Numerical problems.	
	CAMS: Type of cams and followers, definition-basic circle & least radius, angle of	
2	ascent. Dwell, Descent & Action; Displacement, Velocity and Acceleration diagrams of	5
3	followers, Simple harmonic motion, Uniform and maximum velocity, acceleration and	5
	retardation, cycloidal motion.	
	GEARS AND GEAR TRAINS: Toothed gears: types, definitions and terminology,	
	pressure angle, path contact, arc of contact and approach, law of gearing, gear tooth	
4	profiles, involute and cycloidal gear systems, interference in involute gears; Gear	0
4	Trains: Types, simple and compound, epicyclic and reverted gear trains; Sun and	8
	planet gear, differential; Velocity ratio of worm and worm wheel, Helical and spiral	
	gears; spiral angle and efficiency; Numerical problems.	
5	<b>GYROSCOPE:</b> Definition, axis of spin and precision, gyroscopic couple and effect on	
	movement of ships and vehicles, stability of two and four wheel automobile; Numerical	4
	problems.	
6	FLYWHEEL AND GOVERNORS: Turning moment and crank movement diagrams,	8
0	dynamics of simple horizontal and vertical engine. Fluctuation of speed, co-efficient of	0

	fluctuation of speed and energy, Punching press. Simple problems; <i>Governors</i> : Functions, types and characteristics of governors, Sensitivity, stability, isochronism and hunting of governors, governor effort and controlling force curve, effect of sleeve friction. Numerical problems.	
7	<b>BALANCING:</b> Classification, static and dynamic balancing, Primary and secondary balancing of rotary and reciprocating masses, swaying couple and variation of tractive effort, hammer blow, partial balancing of locomotive, multi cylinder in line engines, balancing of V-engines.	7

List	of Experiments:	No. of Hrs
1	To find displacement, velocity and acceleration of slider in a single slider crank mechanism for different crank angles and draw various graphs.	2
2	Verify experimentally the gyroscopic couple is given by $T = I.\omega. \omega_p$	2
3	Draw experimentally the approximate straight line be watts mechanism.	2
4	Find out the positions of the four weights, so that the system becomes statically & dynamically balanced.	2
5	Find the moment of inertia of a given body about an axis passing through C.G. and perpendicular to the plane of the body also calculate the minimum oscillation of the point of suspension.	2
6	Balance experimentally as far as possible the known unbalanced force due to a rotating weight by introducing two balancing weights in two different planes (a) Balancing planes on either side of unbalanced force (b) Balancing planes on the same side of unbalanced force.	2
7	Determination of characteristics curve of the Watt, Porter, Proell and Hartnell Governors using universal governor set up.	2

Course Outcomes: By the end of this course, the student will be able to:						
1	Apply concepts of displacement, velocity and acceleration and their effects on the machine components.					
2	Apply these concepts in the design of machines components to avoid failure					
3	Solve the numerical problems based on kinematic analysis of linkages and engineering applications.
