## HAND MADE IN ITALY

Our artisans put their know-how into creating every single shoe. Thanks to their handcrafting ability and their experience, craftsmanship adds value and quality to a modern product that does not under-estimate the importance of solid traditions.

Today, after more than 40 years, CRISPI is still loyal to the "Made In Italy" philosophy producing high quality footwear, by choosing only the best materials and suppliers, in a highly competitive market which is, however, better capable of acknowledging high quality footwear.

## ABSS

ANKLE BONE  
SUPPORT SYSTEM

The A.B.S.S. revolutionises comfort and protection of the entire ankle area thanks to a combination of innovative materials that allow the footwear to contour gently to your ankle. This system offers outstanding sprain protection even on the roughest terrain whilst supporting the ankle in all conditions, thus limiting fatigue on the lower joints even after very long hikes.

## BOARDLASTING

MECHANICAL CONSTRUCTION

TRADITION COMBINED WITH TECHNOLOGY. The perfect connection between torsion rigidity and flexibility achieved thanks to a mechanical process that wraps the comfortable and soft part of the upper to the insole frame.

## AFS

ANATOMIC FIT  
SYSTEM

It wraps the foot of its full naturalness and anatomical shape, developing a sensation of immediate and long lasting comfort. The shoe becomes lighter and uniform, giving sensitivity and a better control of the foot during walking.

## DTL

DUAL TECH  
LINING

CRISPI pays almost fanatical attention to the dynamics of the feet while walking. Actually, it was while studying foot movement that CRISPI has developed a new constructive technology of the inner lining that associates a kind of GORE-TEX footwear characterized by high thermic insulation and extreme resistance to abrasion with GORE-TEX footwear coupled with naturally comfortable real leather. The result is 100% waterproof, breathable, long-lasting and healthy footwear.

## CCF

CRISPI CROSSBOW  
FRAME

An innovation on the shock absorbing system sole by associating the request of stability, comfort and technology in a high quality product. This insert made in plastic material follows a particular form in a waving module which offers a perfect stability, sustaining the foot and, at the same time, absorbing the shocks during the walk. Thanks to this function similar to a crossbow, this insert improves the braking even in the most difficult terrains.

## TWT

THERMO WIRE  
TECHNOLOGY

An innovative system developed by CRISPI which permits to support the upper by giving extra structure, better stability, protection and support to the shoe.

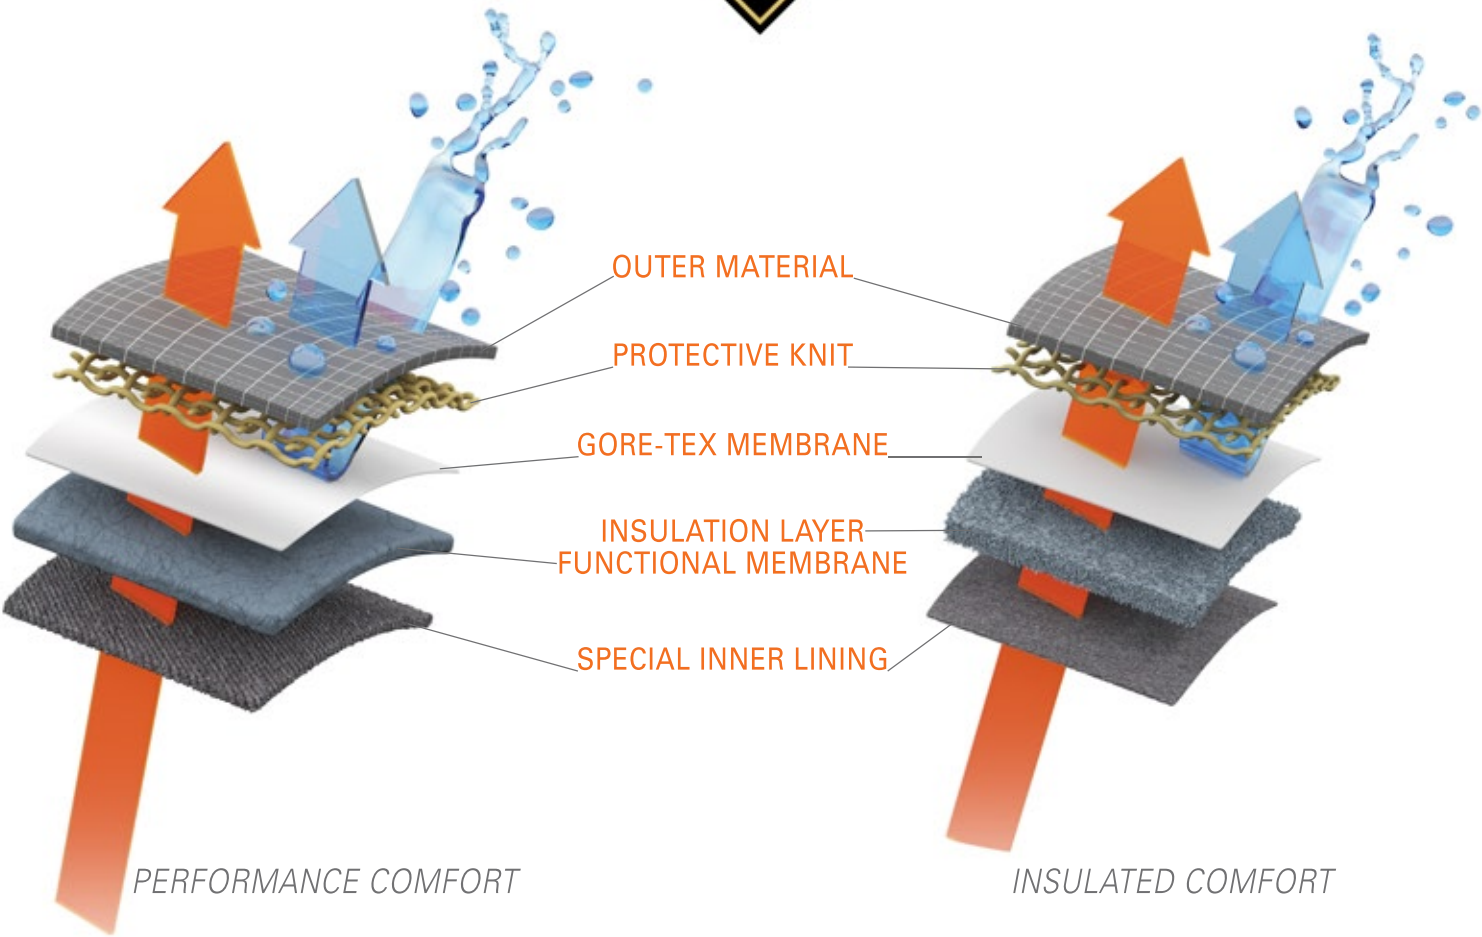

## WFW

WRAPPING  
FRAMEWORK

Structural over injection of a plastic polymer fused on the external part of the upper. This fusion becomes part of the shoe design which not only adds support, but also lightens up the weight and increasing transpiration thanks to the "Breathable areas"
