GREEN TIP

Cleaning for appearance only is a perfectly acceptable standard for spaces including offices and retailers. By interspersing water-only and detergent cleaning procedures, you can reduce overall maintenance expenses and go green as you limit or eliminate use of harmful chemicals. A facility might require a deeper scrubbing weekly or monthly instead of daily, alternating with water-only cleanings to effectively clean visible grime — giving floors an overall polished look, while washing away any residual detergent and preventing unwanted buildup.

GREEN TIP

Some of the most beautiful and low-maintenance landscaping these days is also what is known as "xeriscaping," or landscaping that does not require supplemental watering. As fresh-water resources are becoming scarcer and more expensive worldwide, you will see more commercial buildings moving toward using drought-tolerant plants and groundcovers. Not only does xeriscaping lower water bills, it requires less maintenance and little or no lawn mowing. Although it requires a bit more startup work than laying sod, the benefits endure for years.

A. EchoMop Looped End Wet Mop Heads

The first mop head made from recycled PET plastic bottles, contributing to reduced landfill waste, energy consumption and impact on greenhouse gases. Longer-lasting, lower-linting mop head offers 20% better performance than competitive all-synthetic wet mop yarns. Absorbs more than 4.4 times its weight in water and releases almost 30% upon wringing. Washable and fast drying. Dries quickly—90% dry after only the spin cycle of the washer; air dries 100% overnight. EarthSpun® fibers are manufactured from 30% post-consumer PET plastic bottles. Product contains 97% total recovered material. Wide 5-in. mesh headband works with clamp, quick-change or jaws mate handles (sold separately). 12 mop heads per case. ♻️

GREEN TIP

Bamboo: A Rapidly Renewable Resource

Raw materials that renew quickly can assist with creating a sustainable future. Bamboo can be harvested in five to seven years, whereas trees can require 10 to 50 years before harvesting. Bamboo is sturdy enough to be made into flooring and other products traditionally reserved for wood, such as cutting boards, kitchen accessories, and more. As it functions comparably to wood but renews up to 10 times faster, bamboo is a viable material alternative for a sustainable future.

GREEN TIP

Think about greener solutions, not perfect solutions. It is human nature to feel overwhelmed by the challenges of taking care of something as big as the "environment." But we aren't going to solve the problems by becoming perfect overnight. We will do it one step at a time. Once you have a commitment to do your part you will find that there are lots of opportunities to make small differences. Some will be very easy decisions, like choosing the greener alternative or picking a vendor who offers green options. You can make a difference right now, one choice at a time.
