F.A.Q.

Q. Can I add game titles?

A. Unfortunately, you cannot add game titles on the list. However, supported games will be added continuously. Check the Newsfeed for updates when you start Save Editor.

Q. How come the patch codes don't work even after I apply them?

A. One of the following may be the issue:

①The game version is different.

If the game software is updated and the save data file gets modified, there is a possibility that the patch codes may not work.

* We continuously update patch codes as new versions of games come out, but if and when the current patch codes don't match with the latest game version leading to an error in your save data, use the [Restore from backup] function to return it to its state before your applied the patch code.

②The USB is write protected

Any sort of modification or deletion of a file is blocked.

③The patch code you entered is incorrect.

Q. Why is Save Editor not loading?

A. The server is under maintenance or the installation was not correct. Also, the Internet may not be connected.

Q. Can I use another device besides a USB?

A. No. Use only a USB flash drive.

Q. Can I use a save data from my PSN sub account?

A. You can use any save data from any account.

Q. How do I update Save Editor?

A. Save Editor is automatically updated during startup when new versions are available.

Q. Can I delete my current account and create a new one?

A. Yes, you can delete your current account and create a new one right away. However, you have to wait for 30 days to be able to delete the new account.

Q. Why do I need my PSN logon information?

A. This is per PS4 product specification. You need your PSN logon information to access any PS4 save data that you save on a USB flash drive.
