Lampiran 4. Surat Keterangan Pemeliharaan dan Euthanasi Hewan Coba

SURAT KETERANGAN

CARA PEMELIHARAAN HEWAN COBA
DI UNIT PRAKLINIK LPPT UGM YOGYAKARTA

A. CARA MEMELIHARA HEWAN COBA

Hewan coba (Tikus / Mencit) dipelihara di dalam ruang laboratorium praklinik tempat pemeliharaan hewan coba. Sebelum digunakan untuk penelitian semua tikus diadaptasikan selama seminggu. Tikus dikandangkan secara berkelompok dalam ruangan tertutup dengan ventilasi yang cukup dan pencahayaan memadai. Suhu ruangan berkisar 27-32°C. Penerangan diatur sesuai siklus 12 jam terang- 12 jam gelap. Semua hewan coba mendapat makanan berupa pakan AD II dan minum air RO yang diberikan secara *ad libitum*. Setiap hari kandang dibersihkan dan kesehatan hewan dimonitor.

B. CARA EUTHANASI HEWAN COBA

Teknik euthanasi yang akan digunakan adalah teknik anestesi overdosis dengan menggunakan Ether (AVMA, 2000; Inglis 1980). Awalnya, 10 -20 ml ether dituang ke dalam kapas yang telah diletakkan di dalam stoples. Tikus yang akan dikorbankan selanjutnya dimasukkan ke dalam stoples, kemudian ditutup rapat. Dilakukan pengamatan terhadap nafas dan denyut jantung. Apabila tikus sudah tidak bernafas, tutup stoples dibuka, hewan diletakkan di tempat nekropsi. Sebelum dilakukan pembedahan, dilakukan pengamatan kembali denyut jantung dan nafas untuk memastikan hewan telah benar-benar mati.
