DART FORD 302 Small Block – Technical Notes

Deck Height 8.200" & 8.700"

Bore 4.00" or 4.125" unfinished

Torque Specs – Main caps 1 – 5 7/16" bolts 65 ft lbs w/ CMD # 3 high pressure lube 1 & 5 3/8" bolts 35 ft lbs w/ CMD # 3 high pressure lube

Standard 302 timing chain, timing cover, gear or belt drive can be used. Late model 302 timing chain required for clearance.

Actual deck height will be .001" - .005" taller for additional machining requirements.

Standard 302 oil pump fits correctly even with the 4 bolt front main cap.

When initially removing main caps, the caps and block should be deburred before reinstalling. This will insure that correct main size is maintained.

Press-in 1 1/2" freeze plugs and 2 3/8" cam plug are provided.

Use 351W 1/2" head bolt and stud kits

Head stud holes are blind. They do not go into the water jacket.

A sealant/antiseize must be used on the head studs. Loctite #620 is recommended.

Studs should *never* be torqued into the block. They should only be lightly snugged.

Note: The tapered portion of the stud body should never contact the deck or bolt hole counter bore. If the stud body does thread to deep and makes contact with the deck surface then you should use a small ball bearing in the bottom of the bolt hole to space up the stud accordingly.

CAM BEARINGS O.D. should be deburred before installation.

All our cam bearings are coated for cooler operation and more reliability.

Camshaft bearing bores are 2.2041"-2.2051" I.D. on all 5 cam bores.

The cam bearings have 5 different I.D.s to fit the stock ford cam journals but common O.D.s.

Position		Brg#	Part#	Cam OD
Front	#1	B384	32210051	2.081"
	#2	B385	32210061	2.066"
	#3	B386	32210071	2.051"
	#4	B387	32210081	2.036"
Rear	#5	B388	32210091	2.021"
Complete Set			32210041	

Cam bearing sets for cams with common 2.081" size on all journals are available from Dart or Durabond PN # 351RHP.

Cam bearings sets for 2.051" common journals are available from Dart or Ford # M-6261-C351.

When using a front sump oil pan you can use Ford part# M-6059-D351 (std rotation water pump) or M-8501-B50 (reverse rotation) front cover with provision for a dipstick. The dipstick needs to be in the oil pan with a rear sump. The DART blocks do not have a provision for a dipstick.

WET / DRY SUMP with EXTERNAL OIL PUMP

When using a dry sump system or a wet sump with external oil pump you must block off the oil pump outlet hole in the block next to the front main cap. We recommend drilling and tapping for a 3/8" NPT plug. The oil filter inlet hole can be blocked using a -12AN plug utilizing an o-ring style washer to seal it.

The recommended inlet is at the rear of the block on top of the bell housing area. This will provide *TRUE PRIORITY MAIN OILING* as it delivers oil directly into the main oil galley and feeds the main bearings before it feeds the lifter galleys. This increases the oil flow to the mains and drastically reduces the oil pressure requirements. It is 1/2" NPT thread and is at a 2° angle to help the fitting clear the cylinder head. Using a 45° fitting will help clear the head but some clearancing may have to be done, especially on the 8.200" deck block. If this method is used the –10AN feed hole at the front of the block also must be plugged (see below). If the front external oil feed is used you must plug the 1/2"NPT feed at the rear of the block.

-10AN FITTING

The oil feed hole at the left front corner is a -10AN thread, NOT a tapered pipe thread. If you are not using this hole use an O-ring Boss Plug. You can drill this plug for your oil pressure tap if desired. The following are part numbers for this -10AN plug:

Aeroquip # 4024 Earls # 981410 Goodridge # 4024 Russell # 660290

LIFTER GALLEY RESTRICTORS

The lifter feed at the front & rear of the lifter valley are threaded for an 1/8" NPT plug. There are two lifter feed passages under the cross over plug (1/2" NPT). It is the one coming from the main oil galley, towards the passenger side. The threaded portion is between the main oil galley and the passenger side lifter oil galley. This restricts both right & left lifter galleys. Because it restricts both sides the orifice size in the 1/8" NPT plug should be large enough to feed both sides. These restrictors are located at both ends of the block. To restrict the lifters you need to either install restrictors at both ends or plug one end and restrict the other. Some engine builders prefer to plug the end they are feeding the main oil galley from and install restrictors at the opposite end. This gives you priority main oiling before feeding the lifters.

HYDRAULIC ROLLER LIFTERS

Having dual lifter galley feeds at each end of the lifter valley as described above is a very useful feature but it does interfere with the OEM Ford sheet metal hydraulic roller lifter retainer that Ford and some aftermarket cam companies furnish in their kits. You *cannot* use an OEM style retainer or hydraulic roller lifter in these blocks. You must use a tie-bar style hydraulic roller lifter. Crane Cams manufactures tie-bar hydraulic roller lifters that fit this application. These are also available from Ford Motorsports. Most other cam companies are in the process of producing them. All other standard flat tappet hydraulic, solid and roller lifters are suitable for this application.

PIPE PLUGS All front and rear oil galleys are tapped 1/4" NPS. They are a straight thread, not a tapered thread. When using a 1/4" NPT tapered pipe plug the diameter of the plug determines how deep the plug goes into the threaded hole. If the plug is too shallow it can be threaded with a 1/4" NPT tapered pipe die to the desired size. The Dart kit PN# 32000003 includes all necessary pipe plugs needed for assembly.

ADITIONAL INFO: Various length plugs are available from Pioneer for adjusting the depth of the plug.

PP584 .325" OA PP625 .333" PP567 .375" PP507 .460"

NOTE: Due to variations in lifter sizes and clearance preference, most of our engine builder customers prefer the lifter bores sized on the small size of the specification. Sometime these bores will need to be lightly honed. The lifter bore spec is .8747"-.8757". Most lifter manufacturers recommend .0015"-.002" clearance. ALLWAYS CHECK LIFTER TO BORE CLEARANCE!!

SPECIAL NOTE: with a multitude of crankshaft, rod & piston combinations available it is very important to check clearance of all moving parts, especially crankshaft counter weight and connecting rod to block. Because the cylinder barrels have been extended for more piston skirt support with stroker kits you may have to clearance the bottom of the bores for rod clearance. Be careful if you need to add counter weight clearance at the oil pump area. Be sure to leave enough material to seal the oil pump-mounting flange. All parts must be checked before any type of machining or assembly is attempted.

It is good engine building procedure to ALWAYS check the fit of the distributor before any machining or cleaning is done.

NOTE: If you are using aftermarket cam profiles you must use the correct components for the application.

OIL PANS

Some oil pans, including stock pans will not clear the 4-bolt front & rear main caps. You need to use a pan that is specifically made for 4-bolt end caps. Most manufacturers should stock pans for this block. Moroso & Canton have these.

Dart FORD 302 SB Iron Block - Technical Notes

Part# 31384175 - 31384285 Material: Special RMR alloy

Bore: 4.00" or 4.125" unfinished

Bore & stroke: 4.185" x 3.500" max recommended

Cam bearing bore ID: SVO 2.203"- 2.205"

Cam bearings: Special coated, grooved, w/3 oil holes

Cam Bearing O.S. +.010", +.020", +.030"

Cam bearing press: .002" - .003"

Cam journal OD: Standard Ford SB

Cam Plug: 2.375" dia. Cup plug Dart PN# 32510000

Cylinder Wall Thickness: .250" min @ 4.185" bore
Cubic inch: 385" max recommended

Deck Height: 8.200" & 8.700"

Deck Thickness: .675" min.

Fuel Pump: Mechanical pump provision

Freeze Plugs: STD Ford press in cup plugs 1.500" OD

Head Bolts: 1/2" Blind holes

Lifter Bores: STD Ford .8747" - .8757" Honed to size

Lifters: STD Ford - Hydraulic rollers need tie-bar style lifters.

Main journal size: 302 (2.249")

Main bearing bore: 2.4412" - 2.4420" Honed to size

Main thrust width: .926" - .928"

Main Cap Bolts: #1 7/16" (2) 3/8" (2)

#2, #3, #4 7/16" (2) 7/16" splayed (2)

#5 7/16" (2) 3/8" (2)

Main cap press: .003" - .004"

Main caps: Steel - 4 bolt, all 5

Main cap register: Deep stepped register on each side (no need for dowels)

Oil system: STD Wet Sump or SVO dry sump

Priority Main oiling with external pump (wet or dry)

Oil Filter: Standard filter w/adapter Dart PN# 3294000 (sold separately)

Oil Pan: Aftermarket 302 with dip stick in pan (May require some modification)

Rear Main Seal Std 1 piece seal - FelPro# 2922 or 2941 4.250"x3.625"

Serial No. Right front & main caps

Starter: Standard SBF

Stud & bolt holes, Head: 1/2" STD SVO with Blind holes

Timing chain/gears Standard components Note: (Late model 302 timing chain required)

Timing Cover: Uses stock 302 cover

Torque Specs: 1-5 7/16" bolts - 65 ft lbs

1 & 5 3/8" bolts - 35 ft lbs

Weight, approx: 160 lbs - 8.200" 175 lbs - 8.700"

IMPORTANT

This Block should be assembled only by experienced, professional engine builders.

INSPECTION

Upon receiving this block it should be thoroughly inspected for shipping damage.

Prior to machining and assembly please inspect the following items: Cylinder bores - Oil passages - Deck surfaces - All threads

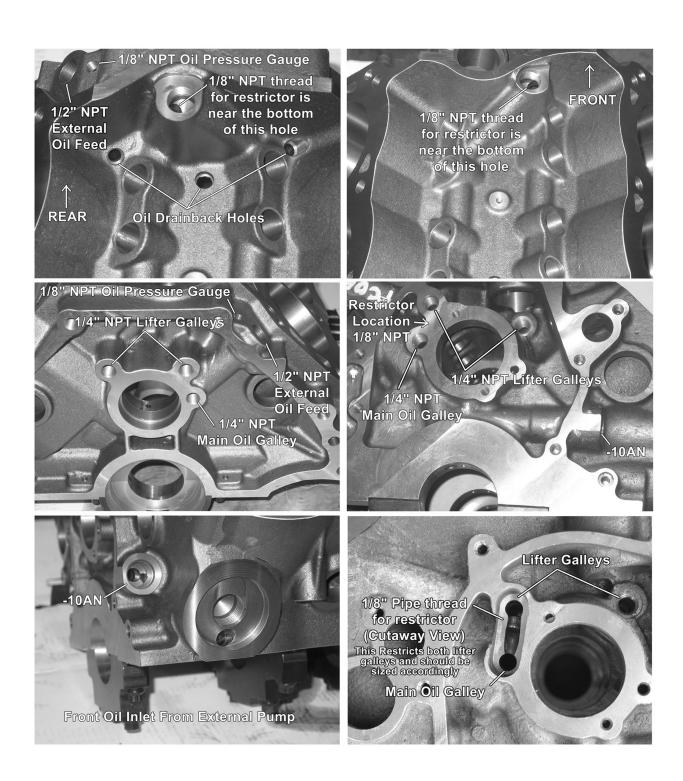

MEASURING & MACHINING

- All initial measuring should be done before any machining has begun.
- Decks are CNC machined to standard deck heights. If you need a particular deck height always measure before machining.
- Main journals are finish line honed to the low to middle of the specification. They should be measured for your preference. If you have need for a different diameter you must realign hone this yourself.
- □ Crankshaft & rod clearance should always be checked before any machining is started. You need .060" clearance for rotating counterweights and rods.
- Due to variations in OD dimensions of the numerous lifter manufacturers, lifter bores are finish honed on the tight side of the tolerance to leave room for lifters that are larger than the standard.

WASHING

Final washing should be very thorough, paying particular attention to all oil galleys. Use hot soapy water and rinse with hot water first, followed by cold water which helps reduces rust.

B12

Here at Dart we are constantly improving upon our products to ensure that you are receiving the latest and most technologically advanced products in the industry. Through our extensive R&D we have found that valvetrain oil is crucial in a high performance engine. The following modification will correct oil volume to the valvetrain that may occur when using solid roller lifters in any block.

Figure 1: Stock un-modified solid roller lifters

Figure 2: Dart oil galley modification from band to pushrod oil hole

We recommend a .020"deep x .080"radius wide groove from the pushrod feed hole to the oil band / machined feed hole in your solid lifters (**Front hole only** as shown in Figure 2 above) depending on your tooling & method. You can also do this with a cutoff wheel or a dremel. This allows you to use the restrictor provisions provided in your Dart block to tune oil volume to the lifter oil galley. This allows you to control the oil going to the pushrods, rocker arms and valve springs.

CAUTION!

The use of lifters that are heavily lightened should not be used in Dart Blocks. The lightening holes will cause lifter oil to leak into the valley instead of oiling the pushrod, rocker arm and valvespring.
