## ACKNOWLEDGMENTS

The authors would like to express their appreciation to our Federal Project Officer, Wendy DeCoursey, for her leadership and thoughtfulness that helped make this study a success. We are also grateful to Sandra Carton in the Office of Head Start, whose input helped ensure that the study was relevant and responsive to the needs of Migrant and Seasonal Head Start programs and families. We also appreciate the input of other federal staff at OPRE and the Office of Head Start, including Meryl Barofsky, Jenessa Malin, and Bill De La Rosa. We thank key study team members at Abt and Westat, including Jackie Mendez, Kelly Lack, Emily Dastrup, Tyler Morrill, Babette Gutman, Sylvia Segovia, Pam Broene, and all the field staff who collected the data. We also thank study contributors at The Catholic University of America: Franssy Zablah, Vanessa Fuentes, Christina Albia, and Celenia DeLapp. We appreciate the insights and guidance of our Project Quality Advisor, Jean Layzer. We are grateful to those consultants who contributed to the study design, including Rachel Chazan-Cohen, Frank Fuentes, Kim Boller, Catherine Tamis-LeMonda, Mariela Pérez, and Sally Atkins-Burnett. We also thank the National Migrant and Seasonal Head Start Association (NMSHSA), in particular the former Executive Director, Cleo Rodriguez. The study team appreciates the many MSHS Community Consultants who advised the study team on key aspects of the design: Consuellis Hawkins-Crudup, Guadalupe Cuesta, José Martinez, Brenda Tamayo-Pagan, Elizabeth Solton, Ivette Galarza, Jason Carlson, Ramona Baron, and Sharon Price. Most of all, we offer our gratitude to the staff, families, and children of the Migrant and Seasonal Head Start programs and centers across the country, who opened their doors and shared their time with us. It has been a pleasure and an honor working with you all.

## OVERVIEW

### INTRODUCTION

Head Start and Early Head Start services provide early learning, health, and family well-being supports to low-income families and their children, birth to school entry. Within the Office of Head Start, the Regional Office for Migrant and Seasonal Head Start (MSHS) is responsible for Head Start programs that specifically serve the children and families of migrant and seasonal farmworkers.

For more than two decades, the Head Start Family and Child Experiences Survey (FACES) and Early Head Start Family and Child Experiences Survey (Baby FACES) studies have provided critical information at the national level on the children and families who participate in Head Start and Early Head Start, as well as the centers and staff who serve them. However, MSHS programs have not participated in these studies for a number of reasons including: (1) the availability of culturally appropriate measures (e.g., child assessments, classroom observations) valid with the migrant and seasonal population, which is primarily Spanish-speaking; and (2) unique features of MSHS programs that are difficult to study reliably and validly (e.g., age range, variation in program schedule, unpredictability of program start up) (ACF, 2011). For example, the study needed to be designed carefully to take into account very different schedules across MSHS centers that can range from a few months to an entire year, depending on the needs of migrant and seasonal families as they follow agricultural seasons and crops south to north across the year.

In 2015, the Administration for Children and Families funded a new study—the Migrant and Seasonal Head Start Study (MSHS Study)—to focus on MSHS programs and the families they serve. The MSHS Study is designed to closely match the characteristics of the whole population of MSHS programs, centers, families and children across the United States (a “nationally representative study”). Since the last nationally representative study of MSHS was conducted almost 20 years ago, this study provides a much-needed update on MSHS programs and centers, as well as the migrant and seasonal farmworker families they serve.

The MSHS Study gathered information from:

- Programs and centers—collected from surveys of program and center directors
- Classrooms—collected through classroom observations and from surveys of teachers and assistant teachers

- Families—collected from interviews with parents
- Children—collected from direct assessments, assessor ratings, and parent and teacher ratings of children

This report describes the MSHS Study methodology, sample, and measures, all developed (or selected) in collaboration with MSHS stakeholders and experts in MSHS programs and early childhood research. The study was conducted by Abt Associates and its partners—The Catholic University of America and Westat—under contract to the Office of Planning, Research, and Evaluation, Administration for Children and Families, U.S. Department of Health and Human Services.

### **RESEARCH QUESTIONS**

1. What are the characteristics of MSHS programs, centers, staff, families, and children?
2. What services does MSHS provide, and what are the instructional practices and general classroom quality of MSHS classrooms?
3. What are the associations between MSHS characteristics and child/family well-being?

### **PURPOSE**

The purpose of this report is twofold: (1) to provide information about the MSHS Study, including its background, design, methodology, and measures; and (2) to report detailed descriptive statistics in a series of data tables on MSHS children, families, classrooms, centers, and programs.

### **KEY FINDINGS AND HIGHLIGHTS**

The data tables present information about MSHS programs, centers, classrooms, teachers, assistant teachers, parents, and children. Specifically, the data tables include information about:

- Program and center directors' background and experience
- Program and center use of data and information
- Staffing characteristics, including issues related to training, support, recruitment, and compensation
- Classroom approaches to family engagement and disability services
- Classroom quality and instructional practices—broadly, and in support of children's language development
- Instructional and assessment practices, including language(s) of instruction

- Teacher and assistant teacher characteristics, including background, knowledge, beliefs, linguistic abilities, well-being, training, support, and compensation
- Parent characteristics, including work schedules, health and well-being, parenting practices, and economic resources
- Household characteristics, including type of housing, who lives in the household and home linguistic practices
- Child characteristics, including language skills, socioemotional skills, counting skills, physical health, and care arrangements (MSHS and other)

## METHODS

The MSHS Study provides information about MSHS children and their families, classrooms, centers, and programs. There are two samples for the study.

The first sample includes the programs and centers whose directors were sent a survey. All program directors providing center-based services received a survey, as well as a random selection of 252 center directors operated by those programs across five geographic regions covering the 48 contiguous U.S. states (East, Midwest, Northwest, Southeast, and California/Southwest).<sup>1</sup> We worked to ensure that centers of different sizes were represented within each region and each program.

The second sample includes those centers that we visited to collect information from classrooms, teachers, assistant teachers, families and children. This sample is a nationally representative sample that was selected in four stages: (1) MSHS programs that provide center-based services were selected across geographic regions; (2) centers were then selected from that pool of programs; (3) classrooms were then selected from that group of centers; and finally, (4) children (and their families) were selected from those classrooms.

The statistics provided in the tables throughout this report are estimates of key characteristics of the MSHS population in 2017. Because we collected information on only a sample of centers, classrooms, teachers, assistant teachers, families, and children, we used a statistical procedure called weighting. This procedure adjusts the

---

<sup>1</sup> The study defined regions consistent with the National Agricultural Workers Survey (NAWS): **East:** Connecticut, Delaware, Kentucky, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, North Carolina, Pennsylvania, Rhode Island, Tennessee, Vermont, Virginia, West Virginia. **Midwest:** Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, Wisconsin. **Northwest:** Colorado, Idaho, Montana, Nevada, Oregon, Utah, Washington, Wyoming. **Southeast:** Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, South Carolina. **California/Southwest:** Arizona, California, New Mexico, Oklahoma, Texas.

data so that we can interpret the information as being representative of the MSHS population in 2017. Because we attempted to survey all of the eligible program directors within MSHS, we did not weight the data collected from program directors.

## GLOSSARY

**Migrant** farmworker families are those engaged in agricultural labor and have changed their residence from one geographic location to another in the preceding two-year period. (Source: <https://eclkc.ohs.acf.hhs.gov/definition/migrant-or-seasonal-head-start-program>)

**Seasonal** farmworker families are those engaged primarily in seasonal agricultural labor and have not changed their residence to another geographic location in the preceding two-year period. (Source: <https://eclkc.ohs.acf.hhs.gov/definition/migrant-or-seasonal-head-start-program>)

**MSHS Programs** are those entities receiving federal funding to oversee and implement Migrant and Seasonal Head Start Centers.

## INTRODUCTION

Founded in 1965, Head Start is a national program that serves low-income families and their children from birth to school entry by providing early learning, health, and family well-being supports. In 1969, Congress created Head Start’s Indian and Migrant Programs Division, and in 1984 the division separated into two branches: Migrant Programs and American Indian Programs. Migrant Head Start (MHS) grantees provided services to “migrant” farmworker families.<sup>2</sup> MHS classrooms have served infants, toddlers, and preschoolers since the program’s inception—other Head Start programs only began serving infants and toddlers in 1995 (through Early Head Start).

The 1998 Amendments to the Head Start Act established the eligibility of “seasonal” farmworker families to receive services.<sup>3</sup> As a result of these amendments, in 1999 Head Start began to provide services to both family groups. The program was then renamed Migrant and Seasonal Head Start (MSHS).

MSHS is administered by the Regional Office for Migrant and Seasonal Head Start (Region XII), located in Washington, D.C. The regional office is one of 12 offices within the Office of Head Start, Administration for Children and Families, within the U.S. Department of Health & Human Services.

### HISTORY OF STUDYING HEAD START

For more than two decades, the Head Start Family and Child Experiences Survey (FACES) and the Early Head Start Family and Child Experiences Survey (Baby FACES) studies have provided information about the children and families who participate in Head Start and Early Head Start, as well as the centers and staff that serve them. However, MSHS programs have not participated in these studies for a number of reasons including: (1) the availability of culturally appropriate measures (e.g., child assessments, classroom observations) valid with the migrant and seasonal population, which is primarily Spanish-speaking; and (2) unique features of MSHS programs that are difficult to study reliably and validly (e.g., age range, variation in program schedule, unpredictability of program start up) (ACF, 2011). For example, the study needed to be designed carefully to take into account very different schedules across MSHS centers

---

<sup>2</sup> *Migrant* farmworker families are those engaged in agricultural labor and have changed their residence from one geographic location to another in the preceding two-year period. (Source: <https://eclkc.ohs.acf.hhs.gov/definition/migrant-seasonal-head-start-programs>)

<sup>3</sup> *Seasonal* farmworker families are those engaged primarily in seasonal agricultural labor and have not changed their residence to another geographic location in the preceding two-year period. (Source: <https://eclkc.ohs.acf.hhs.gov/definition/migrant-seasonal-head-start-programs>)

that can range from a few months to an entire year, depending on the needs of migrant and seasonal families as they follow agricultural seasons and crops south to north across the year.<sup>4,5</sup>

The design for the MSHS Study is based on two prior projects, the *MSHS Research Design Development Project* (ACF, 2004) and the *Design Report* (ACF, 2011). The necessary planning for a study of MSHS programs is captured in the *Design Report* (ACF, 2011), which included the development of a conceptual framework and key research questions. The *Design Report* emphasized inherent differences between the experiences of MSHS families and traditional Head Start families. It also emphasized the impact of those differences on the operation of local programs and centers. The report underscored the need for a new study to reflect these differences in study activities such as sampling, selecting measures, communicating with families and programs, developing data collection strategies, analyzing data, and interpreting findings. It also included recommendations for how to carry out these activities.

### **ABOUT THE MSHS STUDY**

In 2015, ACF funded the **Migrant and Seasonal Head Start Study (MSHS Study)**, contracting with Abt Associates and its subcontractors, The Catholic University of America and Westat, (collectively the “study team”) to collect nationally representative information on MSHS programs, centers, staff, families, and children as of 2017.

The MSHS Study incorporates many of the recommendations from the *Design Report* (ACF, 2011). In particular, we relied on input from the MSHS community on instrument development, approaches to recruitment and data collection, and sampling. These collaborative activities built on the extensive MSHS community engagement and input that informed the *Design Report*.

Specifically,

- We collaborated with a group of program directors who volunteered to be part of the study’s Community Consultant Group. This group participated in two meetings to discuss recruitment plans for data collection. They also promoted the MSHS Study in their own programs and centers and with their MSHS families.
- To engage MSHS programs and centers, we distributed bilingual newsletters to update programs and centers on study activities. We also released a video that

---

<sup>4</sup> Until 2015-2016, American Indian/Alaskan Native (AI/AN) Head Start programs were not included in FACES or BABY FACES studies either.

<sup>5</sup> For a thorough discussion of the contextual approaches to studying MSHS, see ACF (2011).

programs and centers could use with their staff to let them know about the study's objectives and background.

- During the study planning phase, we attended the National Migrant and Seasonal Head Start Association Conference, where we presented on the study to program and center directors and parents in attendance and held informal discussions with program leadership.
- Finally, throughout the study itself, we worked closely with federal MSHS staff, who provided input and guidance.

The MSHS Study comes at an important time for the MSHS program and for migrant and seasonal farmworker families and their children. Significant changes in migration patterns, immigration policies, and climate conditions may be affecting these children and families in as yet unknown ways, and the MSHS program may need to adapt to their changing needs.

This study provides the MSHS program with a national picture of the population it serves, as well as new national estimates for programs, centers, staff, families, and children. The MSHS Study is also the first such national study to include direct child assessments, which will provide valuable information about MSHS children that can inform program, center, and classroom practices.

The data collected for this study are presented here to descriptively represent the national picture of MSHS. The dataset will be made publically available in early 2019 to allow for further secondary analyses by other researchers. Secondary analyses may explore further nuances of the data to inform policy and practice.

## **ABOUT THIS REPORT**

The first part of this report describes the MSHS Study's conceptual framework, research questions, sample, measures, and analyses used to produce the data describing MSHS. The second part of the report contains data tables organized as follows:

- [Section A. Characteristics and Skills of MSHS Children](#). Collected via direct assessments, assessor ratings, parent reports of children, and teacher reports of children
- [Section B. MSHS Classroom Quality](#). Collected from observations of teachers' practice, language use, and cultural responsiveness
- [Section C. MSHS Program Directors](#). Collected from surveys
- [Section D. MSHS Center Directors](#). Collected from surveys
- [Section E. MSHS Teachers](#). Collected from surveys

- [Section F. MSHS Assistant Teachers](#). Collected from surveys
- [Section G. Characteristics of MSHS Families](#). Collected from interviews with parents

### THE STUDY'S CONCEPTUAL FRAMEWORK

The conceptual framework for the MSHS Study was initially developed for the *MSHS Design Report* (ACF, 2011). As described in more detail in that report, the conceptual framework was developed based on the following:

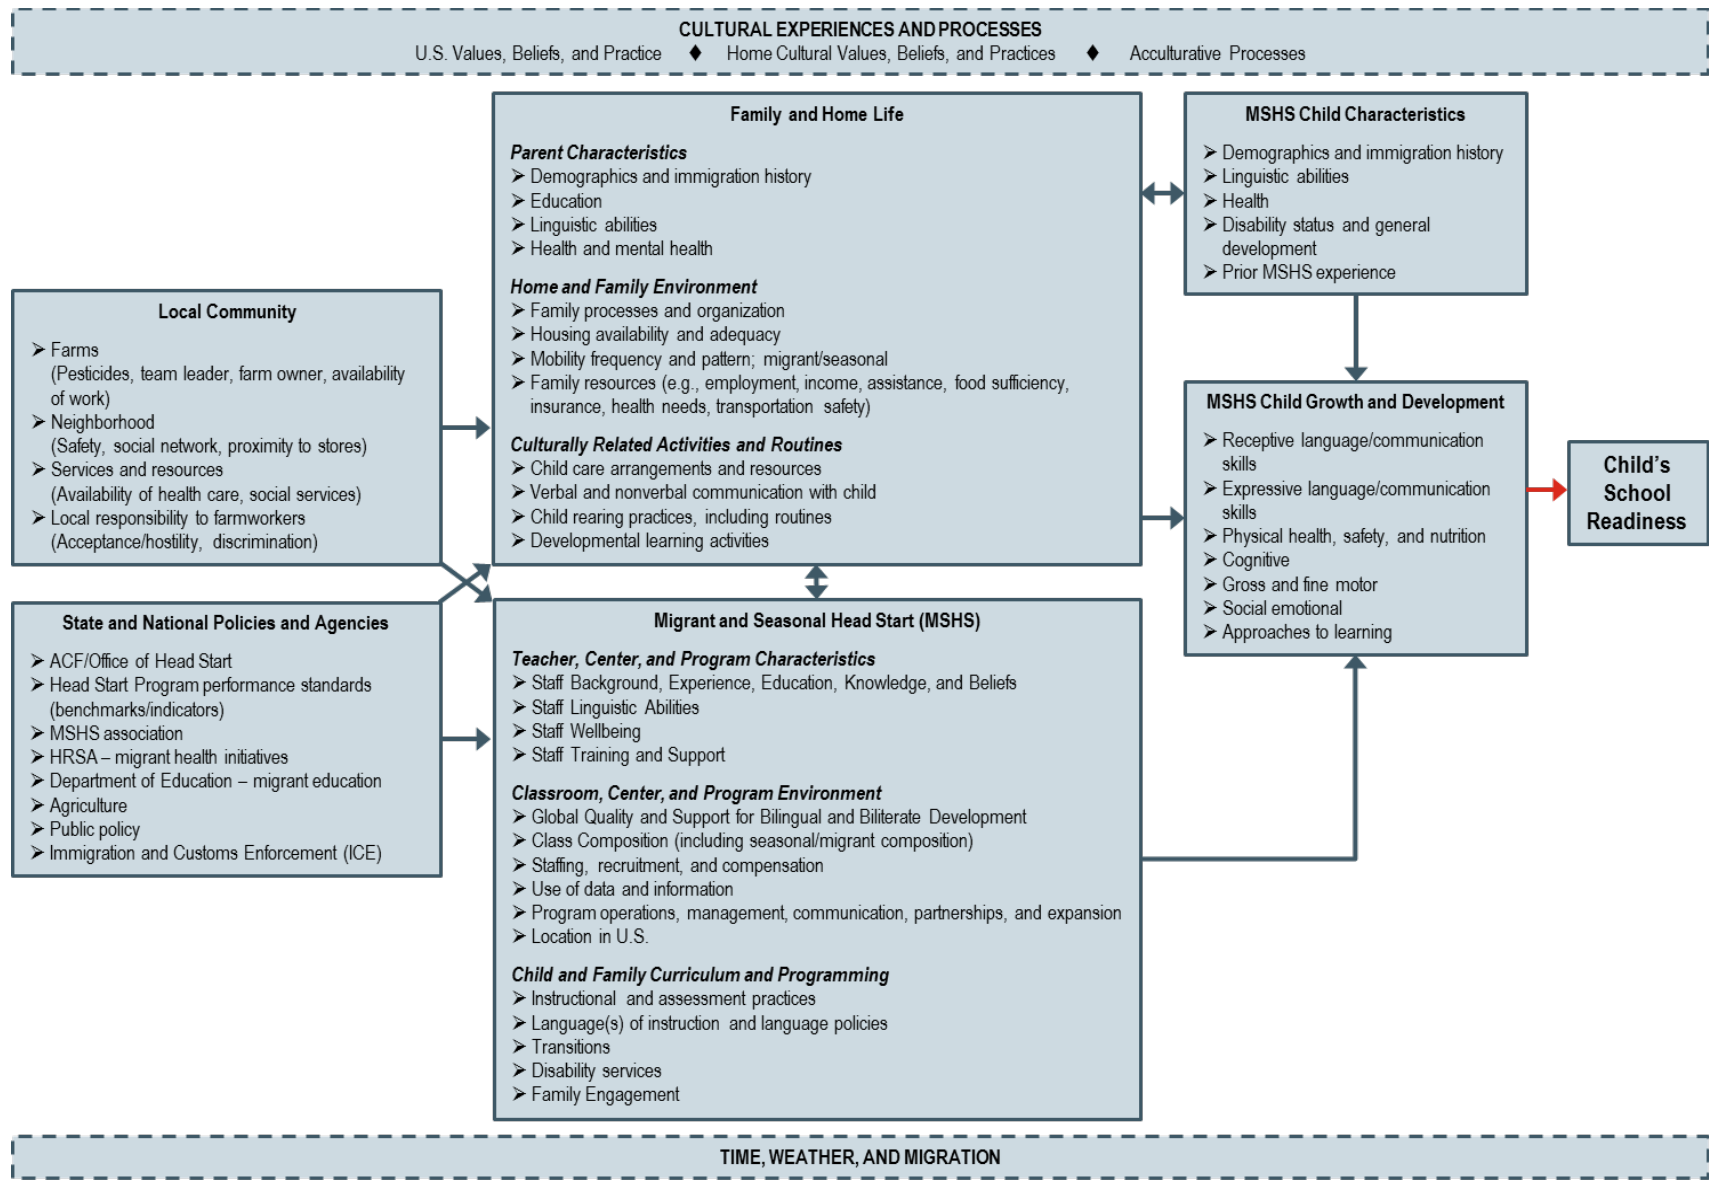

- Cross-cultural theories of human development (Bronfenbrenner, 1979; Super & Harkness, 1999)
- Findings from earlier investigations of MSHS (ACF, 1999a, 1999b)
- Research frameworks used for the FACES study (e.g., ACF, 2006) and Early Childhood Longitudinal Studies (Nord, Edwards, Andreassen, Green, & Wallner-Allen, 2006)
- Input from the broader MSHS community, including program and center directors, academic researchers, and federal MSHS program staff

As part of the current MSHS Study, the study team updated the conceptual framework after identifying and reviewing more recent literature. We then used the updated framework to develop relevant research questions, guide the selection of measures for child assessments and classroom observations, and construct the parent interview protocol and staff surveys.

As shown in Exhibit 1 (on page 5), this model acknowledges the influences of cultural, linguistic, and agricultural experiences on the physical, language, social, and cognitive development of MSHS children and families. At the same time, it accounts for common developmental and intervention processes experienced by all children and families. The conceptual model reflects the vital importance of parental and family influences on MSHS children's development.

A particularly important feature of this model is the placement of MSHS, directly affecting children's development while at the same time influencing family and home experiences through its services to parents, families, and the community. The broader state, federal, and community settings influence each of the layers within the model and affect the families, children, and the MSHS program. Touching on all of these is the larger context of values, beliefs, and practices both in the United States and from a family's home country, such as cultural variations in parenting style. Finally, an overarching force in the model is the less predictable impacts of time and weather, which play a central role in the daily functioning of families and programs for farmworkers.

Exhibit 1. Conceptual Framework for the MSHS Study

In all, family functioning, program participation, communities, policies, culture, time, weather, and children’s own individual characteristics come together to influence the MSHS child in a dynamic, interrelated fashion.

### **THE STUDY’S RESEARCH QUESTIONS**

The study team designed the MSHS Study to address three broad categories of research questions: (1) program, center, family, and child characteristics; (2) MSHS services, instructional practices, and quality; and (3) associations between MSHS characteristics and child/family well-being.

These questions align closely with the conceptual framework in Exhibit 1. We then selected measures and developed data collection instruments based on these questions. The data tables address some but not all of the research questions. Specifically, questions that ask about the association between MSHS characteristics and child/family well-being are not part of this report.<sup>6</sup>

### ***CHARACTERISTICS OF MSHS PROGRAMS, CENTERS, FAMILIES, AND CHILDREN***

1. What are the operational characteristics of MSHS programs and centers (e.g., location, program timing, outreach, staffing and leadership, salaries and benefits, community partnerships, communication across centers and programs)?
2. What are the characteristics of families participating in MSHS (e.g., demographics, agricultural livelihoods and mobility, social and economic challenges, cultural and linguistic features)? How do the migrant families and seasonal families differ?
3. What are the characteristics of infants, toddlers, and preschoolers enrolled in MSHS (e.g., demographics, health, languages)? What foundational skills for school success do MSHS children possess (with a special focus on language, emergent literacy, and socioemotional skills)?

### ***MSHS SERVICES, INSTRUCTIONAL PRACTICES, AND QUALITY***

1. What services are MSHS programs and centers providing to support children’s development and family well-being and engagement?

---

<sup>6</sup> The data tables address some but not all of these research questions. Data will be made publically available for researchers to further explore these and other research questions.

2. What are the service needs and preferences of MSHS families, and potential barriers to their accessing services?
3. What are the instructional practices and general quality of MSHS classrooms? What instructional and assessment practices and policies are used to support children's language development, including bilingual language development?

***ASSOCIATIONS BETWEEN MSHS CHARACTERISTICS AND CHILD/FAMILY WELL-BEING***

1. How do families' service needs vary based on family characteristics (e.g., cultural, social, economic, and migration-related experiences)?
2. How are MSHS services and resources related to family, staff, program, and community characteristics?
3. How are family characteristics related to children's foundational skills for school success?

This report provides the descriptive findings identified in the research questions, describing MSHS children, families, and the programs that serve them. The report does not include findings for those research questions that ask about associations between MSHS characteristics and child/family well-being. However, data were collected that can address these questions. These data will be archived for public access in 2019 so that researchers can further explore the associations between MSHS characteristics and child/family well-being.

---

## MEASURES

This chapter describes the measures (e.g., surveys, interview, child assessments, classroom observations) that we used to collect information about MSHS children, families, staff, classrooms, centers, and programs.

### SELECTION, DEVELOPMENT, AND PILOTING OF STUDY MEASURES

When selecting and developing measures the study team considered:

- Linguistic, cultural, and psychometric appropriateness
- Items from FACES, Baby FACES, or American Indian and Alaska Native (AI/AN) FACES. These items were used whenever possible, with modifications as needed
- Recommendations from the *MSHS Design Report* (ACF, 2011)
- Recommendations from MSHS community members, early childhood researchers, and ACF
- Consistency across measures, while minimizing redundancy of information from multiple sources

We made the decision to only gather direct assessments from older toddlers (24 months through 35 months) and preschoolers (36 months and older) because reliable and valid measures for direct assessment of infants that are suitable for on-site measurement were not available for this cultural and linguistic group. Instead, parent and teacher reports were used to gather information on these younger children.

For the parent interview and all surveys, we included several existing scales (e.g., the Center for Epidemiologic Studies Depression Scale [CES-D]), which are described in more detail in the [MSHS Staff Surveys and Parent Interview](#) section below.

The study team also developed the Cultural Items and Language Use (CILU) Checklist classroom observation measure. The measure is based on the AI/AN FACES 2015 Cultural Items and Practices Questions (see Bernstein et al., 2018). We adapted it to the specific MSHS cultural and linguistic context. For example, we tailored the cultural items to reflect Hispanic culture and agricultural work. We also included languages specific to the MSHS context—Spanish and English, of course—but also indigenous Mexican languages and Haitian Creole. We completed multiple drafts, met to discuss the revisions as a group, and made further revisions before piloting.

---

After initial selection and development of the measures, we piloted the child measures, the CILU Checklist observational measure, teacher reports of children,<sup>7</sup> the parent interview, parent reports of children, and all surveys in several MSHS centers.

The results from the pilot indicated that overall the **child measures** worked well with children. Children were engaged and interested while being assessed. However, some of the measures took longer to use than expected. We therefore adjusted the data collection plan to collect more information from parents rather than through direct assessment of children. The final list of measures ensured that the time that children spent being assessed was reasonable based on their age group (older toddler or preschooler). Finally, the pilot reinforced our decision to prioritize certain skills when hiring staff to help with data collection, including bilingualism and previous experience conducting child assessments.

We also made a number of changes to the **surveys, parent interview, and parent reports** based on feedback from the pilot. This included adding some questions and response options, trimming response categories, and reorganizing or rewording questions.<sup>8</sup> We created pictorial response cards for interviewers to use when asking parents questions that used Likert scales. These cards visually represent categories such as “all, most, some, and none.”

We also piloted the newly-developed **Cultural Items and Language Use (CILU) Checklist** (Barrueco, Layzer, & Caswell, 2017). This was developed by the study team specifically for the MSHS Study and had not been used previously.<sup>9</sup> The CILU Checklist was piloted by three observers in classrooms for bilingual infants, toddlers, and preschoolers in several centers. Based on the pilot, we

- concluded that the CILU Checklist could be used accurately and efficiently along with the CLASS and the ELLCO-DLL without overburdening the data collectors
- decided that the CILU Checklist should be used over a two-hour span at a similar time of the day for all age groups, preferably morning

---

<sup>7</sup> We made no changes to the teacher reports based on the pilot.

<sup>8</sup> For example, we revised the race/ethnicity questions, which parents found confusing in the pilot. The original format asked about Hispanic origin first (e.g., “Are you Mexican/Puerto Rican/Cuban?”) and *then* about race/ethnicity (e.g., “Are you non-Hispanic white/non-Hispanic black/Hispanic?”). We reversed the order of the questions, which was less confusing to parents.

<sup>9</sup> We did not pilot the CLASS or the ELLCO-DLL because these are established measures that have previously been used in bilingual classrooms.

- changed item responses that asked about presence or absence to include an indication of a range (to help differentiate classrooms with rich multicultural/multilingual environments from those with limited but observable attempts to acknowledge cultural and linguistic diversity)
- added subcategories to the Books and Toys categories to capture MSHS-specific cultural books and toys
- added checklists for Shared Book Reading and Singing for infant and toddler classrooms (previously these checklists were included only for preschool classrooms)
- included more space for notetaking and tallying and a cover page to capture any specific information about the classroom being observed on that day

### **HIRING AND TRAINING OF ASSESSORS AND OBSERVERS**

Once the measures were finalized, the study team recruited field staff to assess children (“assessors”) and observe classrooms (“observers”), both of whom were also trained to conduct parent interviews. A key requirement was that assessors and observers be bilingual in English and Spanish to ensure that they would have the linguistic skills necessary to work with MSHS staff, families, and children. The study team also prioritized candidates who had experience with conducting child assessments and classroom observations.

An initial pre-training webinar introduced all field staff to the study, the MSHS program, and cultural considerations for working with and in MSHS communities. To help stress the importance of cultural sensitivity to the MSHS community and to provide an easily accessible reference, we developed the *Migrant and Seasonal Head Start Study Culture Card* (Barrueco, 2017), which was modeled after the *AI/AN Culture Card* (HHS, 2009). We gave a copy of the MSHS Culture Card to all field staff.

Field staff then attended an in-person training. During this time, we provided in-depth reviews and training on each measure, video demonstrations, and scoring practice. Observers practiced in bilingual preschool classrooms and trainers provided targeted feedback and support afterwards. Assessors practiced administering assessments with peers using scripted practice scenarios. Assessors also practiced administering assessments to bilingual children. Throughout the practice sessions, trainers observed and provided constructive feedback to trainees, including targeted break-out sessions for individualized support and practice.

Only those assessors and observers who demonstrated mastery of the materials were hired for the study. For assessors, trainers gauged their mastery using standardized rubrics that defined the reliability targets to be reached by assessors on each child assessment. Observers had to pass a test on the ELLCO-DLL<sup>10</sup> and on the CLASS<sup>11</sup> in order to be certified and then hired to conduct observations in MSHS study classrooms. For the CILU, trainers and observers each rated classrooms using the CILU during the practice sessions in bilingual classrooms. Trainers then reviewed the codes with observers and provided detailed feedback on any errors. Once observers were in the field, trainers provided additional guidance on the CILU, as well as the other observation instruments, in response to observers' questions about their use in MSHS centers.

We incorporated several quality assurance checks one data collection began. For example, trainers supervised assessors and observers on their first MSHS center site visit using the same rating rubrics used in the training. This provided additional assurance that assessors and observers were administering the measures correctly. It also provided another opportunity for the trainers to troubleshoot and provide constructive feedback to assessors and observers. The study team also required observers to score an online video using the CLASS measure every two months during the data collection period. This process helped ensure that observers were continuing to score the CLASS reliably.

## CHILD MEASURES

This section describes the child measures used in the study. They include:

- direct assessments of language skills, developmental abilities, and physical development of older toddlers and preschoolers
- assessor ratings of the socioemotional skills of preschoolers
- parent and teacher reports of language skills, socioemotional skills, developmental abilities, and well-being of infants, toddlers, and preschoolers

---

<sup>10</sup> In order to pass the test, observers had to achieve 85% or better adjacent agreement (within one point for each item) with master coder's scoring across the Literacy Activity Scale items of the ELLCO-DLL.

<sup>11</sup> Teachstone, the purveyor of the CLASS suite of products—including materials, training, and support—provides the online certification. See [www.teachstone.com](http://www.teachstone.com). To demonstrate reliability, observers had to be within one point of the master coder's rating on at least 80% of the dimension scores (across all five videos they rated for the certification) and had to be within one point of the master coder's rating on each dimension in at least two out of the five videos.

**Child Measures**

**Language and Early Literacy**

- Language Dominance and Proficiency Questionnaire
- MacArthur-Bates Communicative Development Inventory (CDI-English) Short Form, and MacArthur Inventario del Desarrollo de Habilidades Comunicativas (IDHC-Spanish) Short Form
- Ages and Stages Questionnaire (ASQ-3)-Communication Subscale
- Preschool Language Scales, Fifth Edition English (PLS-5) and PLS-5 Spanish (Bilingual)—Auditory Comprehension Subscale
- Woodcock-Muñoz Language Survey-Revised Normative Update (WMLS-R NU), Letter-Word Identification (English) and Identificación de letras y palabras (Spanish) Scales

**Socioemotional Skills and Behaviors**

- Children’s Social-Emotional and Behavioral Problems. Brief Infant-Toddler Social and Emotional Assessment (BITSEA)
- Early Childhood Longitudinal Study, Birth Cohort (ECLS-B)-Socioemotional Scale
- Questions on Approaches to Learning (from ECLS-K)
- Leiter-Third Edition (Leiter-3) Examiner Rating Scales

**Math**

- Questions on Children’s Counting Skills in English and Spanish (from ECLS-B)

**Health**

- Height and weight measurement

**Delays and Disabilities**

- Questions on delays and disabilities

Exhibit 2 below summarizes features of the child measures used in the MSHS Study, by mode and age group—infants and young toddlers (birth to 23 months), older toddlers (24 to 35 months), and preschoolers (36 months and older).

Exhibit 2. MSHS Study Child Measures, by Mode and Age Group

Mode	Infants and Young Toddlers: 0 – 23 Months <i>(Note specific age ranges for measures)</i>	Older Toddlers: 24 – 35 Months	Preschoolers: 36 Months and Older

NA=not applicable.

Brief descriptions of each measure follow the exhibit. When applicable, the descriptions include references to reliability estimates, explanations of any constructed scores that appear in the data tables, and information on norm groups.

### Measures of Children’s Language and Early Literacy

The study team computed Cronbach’s alpha—a measure of reliability, or internal consistency—for direct assessments and teacher and parent reports where possible, that is, where items were combined to create a total continuous score. For reliability estimates for child measures, please refer to the first table presented for each measure for which we estimated reliability ([Table A.5](#), [Table A.8](#), [Table A.11](#), [Table A.13](#), [Table A.17](#), and [Table A.18](#)).

#### *Language Dominance and Proficiency Questionnaire*

Teacher report of child. Made available in English and Spanish.

Developed by the MSHS study team (Barrueco, Bumgarner, Caswell, & López, 2016), this set of 12 questions asks teachers about language dominance (i.e., which languages the child knows best, languages that classroom staff speak most often with children, and languages that the child speaks with classroom staff and other children) and language proficiency (i.e., how well the

---

child understands and speaks languages). Response options allowed teachers to provide information on English, Spanish, and other languages.

**Constructed scores:** No constructed scores were created for this measure; frequencies for response options for each item are presented.

**Norm Group.** Does not apply.

*MacArthur-Bates Communicative Development Inventory (CDI–English) Short Form, and MacArthur Inventario del Desarrollo de Habilidades Comunicativas (IDHC–Spanish) Short Form*

---

Teacher and parent reports of child. Made available in English and Spanish.

The study used the MacArthur-Bates CDI and MacArthur IDHC to collect information on children’s expressive and receptive language. It used the Short Forms of both the CDI (Fenson, Marchman, Thal, Dale, Reznick, & Bates, 2007) and IDHC (Jackson-Maldonado, Marchman, & Fernald, 2013) for parents and teachers for each child. Teachers completed their reports independently, while parents were asked the questions on the form by the interviewer as part of the parent interview. Interviewers recorded parent responses in the interview booklets.

The CDI and IDHC ask about children’s receptive (words understood) and expressive (words produced) vocabulary and language skills in Spanish and/or English. Two different levels are available in the Short Form—Level 1 and Level 2—in English and in Spanish. Level 1 includes words *understood* and words *produced* and is for children aged 8-18 months. The English Level 1 form consists of 89 words and short expressions; the Spanish Level 1 includes 104 words and short expressions. The English and Spanish Level 2 forms include words *produced* and are for children aged 16-30 months. Level 2 forms in both languages include 100 words, and respondents are asked to indicate which ones the child uses. Respondents were asked about the same level in English and in Spanish for each child.

**Reliability estimates:** Please refer to [Table A.5](#).

**Constructed scores:** The study team used the developers’ tables in published articles about validation of the Short Forms in English and Spanish to create percentile ranks. Percentile ranks range from 5 to 99, with 50 being the mean (average percentile rank). A child scoring a percentile rank of 50 is linguistically developing as well or better than 50% of the children in the norming sample of

---

the same age (e.g., they are performing at an average level).<sup>12</sup> The tables separate scores by age, and separate tables are used for boys and girls (and both sexes combined, for the IDHC).

**Norm Group.** The norm group for the English version of the Level 1 Short Form consisted of 483 infants between eight and 18 months of age and the norm group for the English version of the Level 2 Short Forms A and B consisted of 911 toddlers between 16 and 30 months. English was spoken as the primary language for all participants, but 14.3 percent of infants were exposed to a second language in their household. For the toddler sample, 13.4 percent were exposed to a second language for Form A and 14.5 percent for Form B. The samples for both Level 1 and Level 2 were drawn from three cities: New Haven, CT; Seattle, WA; and San Diego, CA (Jackson-Maldonado, Marchman, & Fernald, 2013).

The norm group for the Spanish version of the Level 1 Short Form consisted of 601 infants between eight and 18 months. The norm group for the Spanish version of the *Level 2 Short Form* consisted of 2,534 toddlers between 16 and 30 months. The samples for both the Level 1 and Level 2 Short Forms were drawn from Central and Northern Mexico. The sample for the Level 2 Short Form was stratified on the basis of class (716 participants of middle class and 1,818 participants of poverty) and the education level of the mother (Fenson et al., 2000).

### *Ages and Stages Questionnaire (ASQ-3)–Communication Subscale*

---

Teacher report of child. Made available in English and Spanish.

The study team used the ASQ-3 (Squires & Bricker, 2009) to assess children's nonverbal and verbal communication skills. In the MSHS sample, the study team used this measure with children from 0–23 months of age. The ASQ-3 is a general developmental screening instrument that can be used with children aged 2–60 months and is available in English and Spanish. It includes separate questionnaires at two-month intervals for children between 2 and 24 months. As noted by the publisher, the ASQ-3 was designed for early identification of children requiring further assessment for potential disabilities. The Communication Subscale assesses a range of efforts by the child to communicate either nonverbally or verbally with others. The measure asks the respondent six questions about the child's communication behaviors and skills,

---

<sup>12</sup> For more detailed information on the norming samples for the CDI and the IDHC, see Fenson et al. (2007) and Jackson-Maldonado et al. (2013), respectively.

---

and the items are scored Yes=10, Sometimes=5, and Not Yet=0, for a maximum score of 60 and a minimum score of 0.

**Reliability estimates:** The study team was not able to calculate reliability of the Ages and Stages Questionnaire-3 assessment because the sample sizes at each age level were too small.

**Constructed scores:** The ASQ provides guidelines for scores that indicate a need for referrals for further assessment or monitoring (i.e., close attention). The ASQ Referral Zone is two or more standard deviations below the mean. If a child's score falls within the Referral Zone area, further diagnostic assessment is recommended. The ASQ Monitoring Zone is more than one and less than two standard deviations below the mean (closer to average, but not in the average range). Children whose scores fall within the Monitoring Zone in the table may require close attention, specialized activities, and/or repeat screening. Scores in the Monitoring Zone do not indicate a need for further assessment.

**Norm Group.** The norm group for the English version of the ASQ-3 included 15,138 children between 1-66 months of age and their families from across all 50 states. The sample is nationally representative both geographically and in terms of ethnicity. The Spanish version of the ASQ-3 has not been normed (Squires and Bricker, 2009).

*Preschool Language Scales, Fifth Edition English (PLS-5) and PLS-5 Spanish (Bilingual)—Auditory Comprehension Subscale*

---

Direct assessment. Conducted in English or bilingually in Spanish and English.

The PLS-5 (Zimmerman, Steiner, & Pond, 2011, 2012) Auditory Comprehension Subscales assess children's receptive language (ability to process and understand spoken language), including receptive vocabulary, morphology, syntax, investigative language skills, and phonological awareness. The study used the PLS-5 in English for children whose parents reported (in the consent form) that their child did not speak or understand any Spanish. The study used the bilingual version (Spanish and English) of the PLS-5 children whose parents reported that their child sometimes, mostly, or only spoke or understood Spanish.<sup>13</sup>

Items on the bilingual version are given first in Spanish, with items scored to indicate meeting/not meeting a pass criterion. Items on which the pass criterion is

---

<sup>13</sup> Only about 2.5 percent (22 children) spoke a language other than English or Spanish as their primary language. These children were assessed in English.

---

not met are then given in English. The final score for an item takes into account correct responses in both languages to determine whether the pass criterion has been met. This is considered to be “conceptually scored across English and Spanish.” The English version is given solely in English.

**Reliability estimates:** Please refer to [Table A.8](#).

**Constructed scores:** The study team created standard scores and percentile ranks using the publisher’s tables. The standard score is based on a mean of 100 and a standard deviation of 15. It used the publisher’s tables for the corresponding test (either English or Spanish) to arrive at standard scores. Percentile rank describes performance relative to the performance of a segment of the norming sample at the same age. Percentile ranks range from < 0.1 to 99.9, with a mean (average percentile rank) of 50. A child who obtains a percentile rank of 25 is linguistically developing as well or better than 25 percent of children in the norming sample of the same age. The study team used the publisher’s tables for the corresponding test (English or Spanish) to arrive at percentile rank.

**Norm Group.** The norm group for the English version of the PLS-5 consisted of 1,400 infants and children ages 0 to 7 years 11 months. The norm group was stratified on the basis of age, sex, geographic location within the U.S., race/ethnicity, and primary caregiver education level. The sample was drawn from 42 states in four geographical regions of the US (Northeast, Midwest, South, and West). There were 50 subjects for each 3-month age group between 0 and 11 months; 100 subjects for each 6-month group between 1 year and 5 years, 11 months; and 50 subjects for each 6-month age group between 6 years and 7 years, 11 months. English was spoken as the primary language by participants and caregivers (Zimmerman, Steiner, & Pond, 2011, 2012).

The norm group for the Spanish (Bilingual) version of the PLS-5 consisted of 1,150 infants and children ages 0 to 7 years, 11 months; stratified on the basis of age, sex, geographic location, and primary caregiver education level. The sample was drawn from 18 states in four geographic regions of the U.S. (Northeast, Midwest, South, and West) and Puerto Rico. There were 50 subjects for each 3-month age group between 0 and 11 months; 75 subjects for each 6-month age group between 1 and 6 years, 11 months; and 50 subjects for each 6-month age group between 6 and 7 years, 11 months. Spanish was spoken as the primary language by participants and caregivers, even for bilingual children. Fifty-three percent of the sample had a primary caregiver with a Mexican country of origin (Zimmerman, Steiner, & Pond, 2011, 2012).

---

*Woodcock-Muñoz Language Survey–Revised Normative Update (WMLS-R NU), Letter-Word Identification (English) and Identificación de letras y palabras (Spanish) Scales*

---

Direct assessment. Conducted in both English and Spanish.

The Letter-Word Identification and *Identificación de letras y palabras* Scales on the WMLS-R NU (Woodcock, Muñoz-Sandoval, Ruef, & Alvarado, 2005) assess children’s early literacy skills in English and Spanish, namely alphabet letter knowledge (at the younger ages) and reading of single words (at the older ages). The study team assessed all preschool-aged study participants with both versions, starting with the language that the parent indicated was dominant (from the consent form, as described for the PLS-5 above).

**Reliability estimates:** Please refer to [Table A.11](#).

**Constructed scores:** The study team created standard scores, percentile ranks, W scores, the Relative Proficiency Index (RPI), and Cognitive-Academic Language Proficiency (CALP) levels using the publisher’s scoring software (Schrank & Woodcock, 2009). The standard score is based on a mean of 100 and a standard deviation of 15. Percentile rank describes performance on a scale from 1 to 99 relative to the performance of a segment of the norming sample at the same age. A child who achieves a percentile rank of 25 performs as well or better than 25 percent of children in the norming sample of the same age. The W scale is a statistical transformation that provides an equal-interval scale representing the ability of a person in an area being measured and the difficulty of the tasks that are sampled on the test. The W scale for each test is centered on a value of 500, set to approximate the average performance of a 10-year-old. The RPI is based on the distance along the W scale that the child’s score falls; it is presented as an index with a denominator of 90. The RPI predicts a child’s percentage of success (the numerator of the index) on the selected tasks that children of the same age would perform with 90 percent success (the denominator of the index). An RPI of 95/90 would predict that the child could perform with 95 percent success those tasks that average children of the same age perform with 90 percent success. The values presented in the table are the numerator values only (with the denominator assumed to be 90). RPI ranges correspond to levels of CALP as follows (RPI ranges in parentheses): Very Advanced (100/90), Advanced (98/90 to 100/90), Fluent to Advanced (95/90 to 98/90), Fluent (82/90 to 95/90), Limited to Fluent (67/90 to 82/90), Limited (24/90 to 67/90), Very Limited (3/90 to 24/90), and Negligible (0/90 to 3/90). Note that the CALP levels are language specific.

**Norm Group.** The norm group consisted of 8,782 subjects older than two years of age. The sample was drawn from across 100 U.S. communities and stratified

---

on the basis of U.S. Census region (Northeast, Midwest, South, and West), community size (urbanized, urban cluster, and rural), sex, race, type of school, type of college, education level of adults, occupational status and occupation, and whether the participant was foreign-born (Schrank, McGrew, and Dailey, 2010).

## Socioemotional Skills and Behaviors

### *Children's Social-Emotional and Behavioral Problems. Brief Infant-Toddler Social and Emotional Assessment (BITSEA)*

---

Parent report of child. Made available in English and Spanish.

The BITSEA (Briggs-Gowan, Carter, Irwin, Watchtel, & Cicchetti, 2004) is a parent report of their child's social-emotional competence and social-emotional and behavior problems for children aged 12-36 months. It is a 42-item screener version of the longer Infant-Toddler Social and Emotional Assessment measure (Carter, Briggs-Gowan, Jones, & Little, 2003). The BITSEA assesses the development of children's emerging social and emotional competencies (e.g., follows rules, expresses affection with loved ones, hugs or feeds dolls or stuffed animals), as well as externalizing behaviors (activity, aggression), internalizing behaviors (inhibition, separation, depression), dysregulation (sleeping, eating), maladaptive habits, and fears. The interviewer reads each of the 42 statements to the parent, and the parent reports whether the statement is not true or the behavior is observed rarely (0), somewhat true or the behavior is observed sometimes (1), or very true or the behavior is observed often (2).

**Reliability estimates:** Please refer to [Table A.13](#).

**Constructed scores:** The BITSEA Problem Scale is a measure of social-emotional and behavioral problems that comprises 31 (of the 42) items. Items are summed to arrive at the Problem Scale raw score. Cut scores for determining Possible Problems are set at the 25th percentile of the Problem Scale raw score. If a child's raw score is equal to or greater than the cut score for the child's age group and gender, then the child's score is in the Possible Problem range. The study team used the publisher's cut score table to arrive at the designation.

The BITSEA Competence Scale is a measure of social-emotional competence that comprises 11 (of the 42) items. Items are summed to arrive at the Competence Scale raw score. Cut scores for determining Possible Deficit/Delay are set at the 15th percentile of the Competence Scale raw score. If a child's raw score is equal to or less than the cut score for the child's age group and gender, then the child's score is in the Possible Deficit/Delay range. The study team used the publisher's cut score table to arrive at the designation.

---

**Norm Group.** The norm group consisted of 600 children from 12 months to 35 months, 30 days. The sample was drawn from across 42 states in four geographical regions of the U.S. (Northeast, Northwest, South, and West) and stratified on the basis of age, sex, ethnicity, parent education level, and geographic region (Briggs-Gowan and Carter, 2006).

*Early Childhood Longitudinal Study, Birth Cohort (ECLS-B)–Socioemotional Scale*

---

Parent report of child. Made available in English and Spanish.

During the interview, the study team asked parents 31-items from an adapted version of the English and Spanish versions of the ECLS-B, a national study with preschoolers (Najarian, Snow, Lennon, & Kinsey, 2010). The scale drew 20 items from the Preschool and Kindergarten Behaviors Scales–Second Edition (PKBS-2; Merrell, 1994), eight from the Social Skills Rating System (SSRS; Gresham & Elliott, 1990), two items from the FACES study, and a single item created for the ECLS-B. For each item, the interviewer asks the parent to state the frequency of the observed skill or behavior. Response options are Never, Rarely, Sometimes, Often, or Very Often.

**Constructed scores:** No constructed scores were prepared for this instrument, consistent with the ECLS-B. Frequencies for response options for each item are presented.

**Norm Group.** Does not apply.

*Questions on Approaches to Learning (from ECLS-K)*

---

Teacher report of child. Made available in English and Spanish.

This measure consists of six questions developed for Early Childhood Longitudinal Study, Kindergarten Cohort (ECLS-K) (Tourangeau, Nord, Lê, Sorongon, & Najarian, 2009) and used in the FACES study to assess approaches to learning. The questions gauge attention, organization, adaptation to routines, task persistence, and task interest and orientation. Higher scores indicate more positive learning behaviors. Teachers' ratings of the frequency of the child's approaches to learning tasks were scored as Never=1, Sometimes=2, Often=3, Very Often=4.

**Reliability estimates:** Please refer to [Table A.17](#).

**Constructed scores:** The study team computed the mean of each child's six raw scores to produce the score for each child.

**Norm Group.** Does not apply.

---

*Leiter–Third Edition (Leiter-3) Examiner Rating Scales*

---

Assessor rating.

The study used the Leiter-3 (Roid, Miller, Pomplun, & Koch, 2013) to measure children’s emotional and behavioral regulation. The instrument is composed of eight subscales that ask the assessor to rate the child’s attention, activity level, self-regulation, and sociability during the direct child assessment session. Items within subscales are rated as 0=Rarely/Never, 1=Sometimes; 2=Often; 3=Usually/Always. The subscales are (A) Attention; (B) Organization/Impulse Control; (C) Activity Level; (D) Sociability; (E) Energy and Feelings; (F) Regulation and Mood Regulation; (G) Anxiety; and (H) Sensory Reactivity. In addition, the assessor completed a checklist of seven Severe Behaviors.

**Reliability estimates:** Please refer to [Table A.18](#).

**Constructed scores:** The study team computed raw scores by summing the item scores within each subscale. Scaled scores were available for four of the eight subscales (A, B, E, and G); the team created them using the publisher’s table; scaled scores have a mean of 10, standard deviation of 3. The study team created the Cognitive/Social Composite raw score by summing the raw scores from subscales A, B, C, and D. The study team created the Emotions/Regulations Composite raw score by summing the raw scores from subscales E, F, G, and H. The team identified the scaled scores for the composites using the publisher’s table; composite scaled scores have a mean of 100, standard deviation of 15.

**Norm Group.** The norm group consisted of 1,603 individuals older than 3 years of age. The sample was drawn from 36 states in all four U.S. Census regions (Northeast, Midwest, South, and West) and stratified on the basis of age, gender, race/ethnicity, education level of parent/adults, geographic region within the U.S., and community size (Roid, Miller, Pomplun, & Koch, 2013).

## Math

---

*Questions on Children’s Counting Skills in English and Spanish (from ECLS-B)*

---

Teacher report of child. Made available in English and Spanish.

This pair of items from the ECLS-B study (Nord, Edwards, Andreassen, Green, & Wallner-Allen, 2006) asks the child’s teacher, “How high can this child count in English?” and “How high can this child count in Spanish?” Response categories are categorical and range from “Not at all” to “Up to 100 or more.”

**Constructed scores:** No constructed scores were created for this instrument. Frequencies for response options for each item are presented.

**Norm Group.** Does not apply.

---

## Health

### *Height and Weight Measurement*

---

Direct assessment. Conducted in English or Spanish.

The study team measured children's weight and height using a protocol from the Centers for Disease Control and Prevention (CDC) that has also been used in the Baby FACES study. First, the assessor weighs the child using a digital mechanical scale set to measure in pounds. The assessor repeats the weight measurement once or twice to obtain two measurements within 0.2 pound of each other. Next, the assessor measures the child's standing height using a Shorr Board®. The assessor repeats the height measurement once or twice to obtain two measurements within ¼ inch.

**Constructed scores:** Body mass index (BMI) was computed using the CDC approach. BMI is calculated as the ratio of a person's weight in kilograms to height in meters and can be used as an indicator of overweight or obese status. Children's weight in pounds and height in inches were converted to kilograms and meters. The CDC approach was also used to determine biologically implausible values (BIV) for height and weight. The BIV weight, height, and BMI values were identified by extrapolating one half of the distance between 0 and +2 z-scores to both tails of the distribution. These implausible values were likely the result of measurement error. When a child's weight, height, or BMI were identified as biologically implausible, all three values were set to missing.

The CDC considers a child to be *underweight* when his/her BMI score is below the 5<sup>th</sup> percentile for his/her age and gender; *normal* weight when his/her BMI score is at or above the 5<sup>th</sup> percentile and below the 85<sup>th</sup> percentile for his/her age and gender; *overweight* when his/her BMI score is at or above the 85<sup>th</sup> percentile and below the 95<sup>th</sup> percentile for his/her age and gender; and *obese* when his/her BMI score is at or above the 95<sup>th</sup> percentile for his/her age and gender.

**Norm Group.** Does not apply.

## Delays and Disabilities

### *Questions on Delays and Disabilities*

---

Teacher report of child. Made available in English and Spanish.

The study team (Barrueco et al., 2016) created this measure, consisting of four questions about referrals for screening and diagnoses received for developmental delays or disabilities.

**Constructed scores:** No constructed scores were created for this measure; frequencies for response options for each item are presented.

**Norm Group.** Does not apply.

**CLASSROOM MEASURES**

The study team observed classrooms to provide a comprehensive understanding of instructional practices and global classroom quality, as well as children’s cultural and language environment—and to collect data that would allow researchers to examine how these classroom-level factors might be related to MSHS practices, staff, families, and children.

**Classroom Measures**

- Classroom Assessment Scoring System® (CLASS®), Pre-K
- Early Language and Literacy Classroom Observation—Dual Language Learners (ELLCO-DLL)
- MSHS Cultural Items and Language Use (CILU) Checklist

For the purpose of this study, the study team selected measures designed to provide information about the quality and kinds of support for children’s social and emotional development, their language and literacy development, and their cognitive-academic development. Following the example of the American Indian and Alaska Native Head Start FACES (AI/AN FACES) study, we also included a measure of the presence and use of cultural items and home languages in MSHS classrooms.

Exhibit 3 below presents a summary of classroom observation measures used in the MSHS Study, by age group served in the classroom. Brief descriptions of each measure follow the exhibit. Note that the durations of observations in the infant/young toddler and older toddler classrooms (2 hours each) differ from that in the preschool classroom (2.5–3 hours). Observers spent more time in preschool classrooms in order to aim for the study goal of completing five 20-minute observation cycles per classroom for the CLASS® Pre-K measure; all three instruments were used concurrently in the preschool classrooms.

Exhibit 3. MSHS Study Classroom Observation Instruments, by Focus and Age Group

Focus	Age Group		
	Infant and Young Toddler Classroom (0 – 23 Months)	Older Toddler Classroom (24 – 35 Months)	Preschool Classroom (36 Months and Older)
Global Quality	NA	NA	<ul style="list-style-type: none"> <li>• Pre-K Classroom Assessment Scoring System® (CLASS) Direct observation (2.5 – 3 hours; five 20-minute segments)</li> </ul>
Support for Bilingual Language Development and Biliteracy	NA	NA	<ul style="list-style-type: none"> <li>• Early Language and Literacy Classroom Observation—Dual Language Learners (ELLCO-DLL) Direct observation (2.5 – 3 hours)</li> </ul>
Children’s Cultural and Language Environment	<ul style="list-style-type: none"> <li>• MSHS Cultural Items and Language Use Checklist (CILU) Direct observation (2 hours)</li> </ul>	<ul style="list-style-type: none"> <li>• MSHS Cultural Items and Language Use Checklist (CILU) Direct observation (2 hours)</li> </ul>	<ul style="list-style-type: none"> <li>• MSHS Cultural Items and Language Use Checklist (CILU) Direct observation (2.5 – 3 hours)</li> </ul>

NA=not applicable.

---

### *Classroom Assessment Scoring System® (CLASS®), Pre-K*

---

The CLASS Pre-K (Pianta, La Paro, & Hamre, 2008) is designed to be used in classrooms with children aged 3-5. Observers rate 10 dimensions that form three domains: (1) Emotional Support (including Positive Climate, Negative Climate, Teacher Sensitivity, Regard for Student Perspectives); (2) Classroom Organization (including Behavior Management, Productivity, Instructional Learning Formats); and (3) Instructional Supports (including Concept Development, Quality of Feedback, Language Modeling).

The CLASS Pre-K uses repeated observation and 20-minute scoring cycles (five for this study) to provide a picture of classroom interactions over a period of 2.5 to 3 hours. For the CLASS domains, scores of 1 or 2=Low Quality; 3, 4, or 5=Mid Quality; and 6 or 7=High Quality. For the purpose of categorizing classrooms, the domain scores are not rounded. For example, a classroom with a score of 5.9 on the CLASS Emotional Support domain would be categorized as falling in the Mid Quality range rather than the High Quality range; only scores of 6.0 or above would be included in the High Quality range.

**Reliability estimates:** Please refer to [Table B.1](#) and [Table B.2](#).

**Constructed scores.** The study team averaged scores across the five cycles to arrive at a score for each of the ten dimensions on the CLASS for each preschool classroom. (Negative Climate was reverse coded so that higher scores indicate higher quality.) The study team created the domain scores by averaging the scores for the dimensions within each domain. Scores for both dimensions and domains range from 1 to 7.

---

### *Early Language and Literacy Classroom Observation—Dual Language Learners (ELLCO-DLL)*

---

The ELLCO-DLL (Castro, 2005) was developed as a companion measure to the Early Language and Literacy Classroom Observation (ELLCO) Toolkit (Smith, Dickinson, Sangeorge, & Anastasopoulos, 2002a, 2002b), a standardized measure used to assess the quality of language and literacy practices in preschool classrooms. The ELLCO-DLL was designed to assess specific practices for dual-language learners connected with each of the three subscales of the ELLCO—a general classroom observation overall scale (Classroom Observation Scale); a checklist rating of the literacy environment (Literacy Environment Checklist); and a five-point rating scale of literacy activities

---

observed (Literacy Activities Rating Scale) where 1=Deficient, 3=Basic, and 5=Exemplary. ELLCO-DLL is scored over a period of three hours in the classroom.<sup>14</sup>

**Reliability estimates:** Please refer to [Table B.4](#).

**Constructed scores:** To create the score for each classroom for the Literacy Environment Checklist, the study team summed scores from four subscales: Book Selection, Book Use, Writing Materials, and Writing around the Room. To create the score for each classroom for the General Classroom Environment Checklist, the study team summed the scores from two items: Presence and Use of Technology, and Classroom Management Strategies. To create the score for the Language, Literacy, and Curriculum subscale for each classroom, the study team summed scores from the following items: Presence of Books, Approaches to Book Reading, Approaches to Children’s Writing, Approaches to Curriculum Integration, Facilitating Home Support for Language and Literacy, and Approaches to Assessment. To create the score for the Literacy Activities Rating Scale for each classroom, the study team summed the score on eight items related to book reading. To create the Total Score for each classroom, the study team summed of scores for the Literacy Environment Checklist, the Classroom Observation Scale, and the Literacy Activities Rating Scale.

### *MSHS Cultural Items and Language Use (CILU) Checklist*

---

To better understand children’s culture and language experiences in MSHS, the study team developed a new set of observation items, adapted from the AI/AN FACES 2015 Cultural Items and Practices Questions (see Bernstein et al., 2018). The tool the team developed—the MSHS Cultural Items and Language Use Checklist (Barrueco, Layzer, & Caswell, 2017)—captures the presence, number, and use of items in the classroom representing the cultures of MSHS children and families (e.g., books, musical instruments, foods; books, signs, and labels in Spanish and other languages). Observers also documented whether shared reading or singing occurred during the observation; the language of the books, reading, and singing; and the grouping (whole group, small group, individual) in which the activities occurred. Finally, the CILU Checklist also captures which languages staff used for instructional and non-instructional purposes, by student grouping.

---

<sup>14</sup> For further information on the ELLCO-DLL, see Castro et al. (2017) and Buysse, Castro, and Peisner-Feinberg (2010).

---

**Constructed scores:** No constructed scores were created for this measure; frequencies for response options for each item are presented.

### ***MSHS STAFF SURVEYS AND PARENT INTERVIEW***

Topics covered in the staff surveys and parent interview are outlined in Exhibit 4 below.

#### **Staff Surveys**

The MSHS Study sent separate surveys to program directors, center directors, teachers, and assistant teachers. The surveys are grounded in the MSHS research questions and conceptual framework. Each instrument (except for the Program Director Survey) was translated into Spanish by professional translators and participants selected the language version they felt most comfortable with. In the Teacher and Assistant Teacher Surveys, we incorporated the 12-item version of the Center for Epidemiologic Studies Depression (CES-D) Scale. For reliability estimates for this scale, please refer to [Table E.10](#) and [Table F.13](#).

All staff surveys collected information on the respondent's background and experience and then focused on questions relevant to each respondent. For example, the Program Director Survey collected information on issues such as enrollment, program policies, and approaches to hiring, communication, and supervision. The Center Director Survey focused on characteristics of the center, such as staffing, enrollment, family engagement, and instructional practices. The Teacher and Assistant Teacher Surveys gathered information on topics at the classroom level, such as classroom composition and language(s) of instruction.

#### **Parent Interview**

The parent interview was also grounded in the MSHS research questions and conceptual framework. The parent interview focused on characteristics of the household and child.

For the parent interview, interviewers read the questions to parents in the parents' preferred language (either Spanish or English) and marked parents' responses on the paper interview form. Interviewers used pictorial cards to help parents understand the Likert scale ratings.

The study team incorporated items from two existing scales into the parent interview: 1) the Center for Epidemiologic Studies Depression (CES-D) Scale (National Institutes of Mental Health); and 2) the Migrant Farmworker Stress Inventory (MFWSI) (Hovey, 2002). We included the individual CES-D items necessary to be able to calculate both a 10-item and a 12-item composite score. The 10-item version of the CES-D scale includes the same items as those used in the MSHS supplement to the National Agricultural Workers Survey (2015). The 12-item version of the CES-D Scale has also been used in the FACES and Baby FACES studies. For reliability information on these

scales, please refer to [Table G.10](#). Readers should use caution when interpreting results from the CES-D. This measure was developed for research purposes and does not provide a formal diagnosis of depression. A formal diagnosis can only be determined by a trained mental health professional.

### **Constructed scores**

For the majority of interview and survey questions, we report frequencies (means or percentages) in the data tables. When we created a constructed score from one or more survey questions, we marked these questions with an asterisk in the data tables and added a note to the table to indicate a constructed score. More information about the constructed scores can also be found in the *MSHS Study 2017-2018 Data User's Guide* that will accompany the archived dataset.

Exhibit 4. Topics Covered in Parent Interview and Staff Surveys

Source	Topic
Program Director Survey	A. <b>Program Director Background and Experience</b> (race/ethnicity, age, educational level, general experience, experience with MSHS, language(s) spoken by Program Director)
	B. <b>Training and Support for Program Staff</b> (training and technical assistance supported by MSHS funds, resources used by program staff)
	C. <b>Program Enrollment</b> (program enrollment numbers by age group, predicting and planning for enrollment, communication with other programs on enrollment)
	D. <b>Staffing</b> (percentage of staff replaced, strategies for reducing teacher turnover)
	E. <b>Use of Data and Information</b> (storage and linkages among data sources)
	F. <b>Program Management, Communication, Partnerships, and Expansion</b> (time spent on different responsibilities, receipt of funds other than MSHS, job challenges, changes to program due to various factors, concerns about MSHS children and families)
	G. <b>Instructional and Assessment Practices</b> (curricula and assessments used by age group)
	H. <b>Language of Instruction and Language Policies</b> (language(s) used by teachers, instructional language policy of program)
	I. <b>Transitions</b> (ways that programs facilitate families' transitions to other MSHS centers and public schools, communication with other programs)
Center Director Survey	A. <b>Center Director Experience, Education, and Knowledge</b> (race/ethnicity, age, educational level, general experience, experience with MSHS, language(s) spoken by Center Director)
	B. <b>Staff Training and Support for Center Staff</b> (types of professional development offered to center staff, topics and frequency of staff training, Center Director responsibilities and job challenges)
	C. <b>Class Composition</b> (center enrollment by age group, number of classrooms, language(s) of families served by center, race/ethnicity of children served by center, reasons for eligible families not being served)
	D. <b>Staffing, Recruitment, and Compensation</b> (number of teachers employed in center, amount and reasons for teacher and family service worker turnover, Center Director work hours, salary and benefits)
	E. <b>Community Partnerships</b> (types of and need for collaborations with community organizations, barriers to greater collaboration)
	F. <b>Use of Data and Information</b> (internet access, use of individual child data by teachers, barriers to reviewing these data)
	G. <b>Family Engagement</b> (approaches used to encourage family engagement, types of activities offered to parents, barriers to parental participation, hours and months of operation of center, transportation for children)
	H. <b>Instructional Practice(s)</b> (teacher use of curriculum, training provided on curriculum)
	I. <b>Language(s) of Instruction and Language Policies</b> (language(s) for center activities, language policy, Center Director beliefs about language learning and second language development)
	J. <b>Transitions</b> (facilitation of families' transitions to other MSHS centers and public schools, barriers to communicating with other centers)

Source	Topic
Teacher Survey	A. <b>Teacher Background, Experience, Education, Knowledge, and Beliefs</b> (race/ethnicity, age, educational level, teaching experience, experience with MSHS, beliefs about teaching young children)
	B. <b>Teacher Linguistic Abilities</b> (languages spoken by teacher)
	C. <b>Teacher Well-Being</b> (satisfaction with teaching, symptoms of depression, level of support for interactions between MSHS staff and parents)
	D. <b>Teacher Training and Support</b> (types of training and support received)
	E. <b>Class Composition</b> (number and age group of children in the classroom, languages children speak, percentage of children meeting developmental expectations)
	F. <b>Staffing and Compensation</b> (MSHS teaching schedule, salary, benefits)
	G. <b>Instructional and Assessment Practices</b> (instructional practices, nap time, supports at work)
	H. <b>Language(s) of Instruction and Language Policies</b> (languages of instruction and printed materials, communication with parents)
	I. <b>Disability Services</b> (approaches to working with children with disabilities)
	J. <b>Family Engagement</b> (activities to engage families)
Assistant Teacher Survey	A. <b>Assistant Teacher Background, Experience, Education, Knowledge, and Beliefs</b> (race/ethnicity, age, educational level, teaching experience, experience with MSHS, beliefs about teaching young children)
	B. <b>Assistant Teacher Linguistic Abilities</b> (languages spoken by assistant teacher, language(s) of instruction, facilitating language use in the classroom)
	C. <b>Assistant Teacher Well-Being</b> (satisfaction with teaching, level of support for interactions between MSHS staff and parents, symptoms of depression)
	D. <b>Instructional and Assessment Practices</b> (additional supports at work)
	E. <b>Staffing and Compensation</b> (MSHS teaching schedule, salary, benefits)
Parent Interview	A. <b>Child Characteristics</b> (race/ethnicity, age, country of birth)
	B. <b>Household Member Characteristics</b> (primary and other caregiver's race/ethnicity, age, country of birth, time in U.S., education level)
	C. <b>Household Linguistic Abilities/Practices</b> (languages spoken by caregivers and to MSHS child)
	D. <b>Child Health</b> (birth weight, prematurity, teeth brushing habits, dental and doctor visits, vaccinations, medical conditions)
	E. <b>Work and Resources</b> (primary and other caregiver work history, type of work, salary, lack of sufficient resources)
	F. <b>Household Members' Health</b> (primary and other caregiver health conditions, pesticide exposure, well-being, including depressive symptoms and stress level)
	G. <b>Raising a Child</b> (family strengths, child sleep habits, parenting habits, activities parents do with children, children's books, and family habits)
	H. <b>Housing</b> (residential history, type of housing, distance and transportation to MSHS center)
	I. <b>Child Care Arrangements and MSHS Involvement</b> (types of prior child care arrangements, reasons for MSHS program attendance, types of parent involvement, MSHS communications and services)

## SAMPLING AND ANALYSIS APPROACH

This chapter describes how the MSHS Study team selected the centers and families to include in the study (the “sample”) and analyzed the information collected about them. An overview of our sampling and analysis approaches follows. For additional information related to our sampling and analysis methodology, please see the *MSHS Study 2017-2018 Data User’s Guide* that accompanies the dataset that is archived for public use.

### SAMPLING APPROACH

To create the MSHS Study sample, we first identified the complete set of eligible MSHS programs<sup>15</sup> and centers by using information from the Head Start Enterprise System.<sup>16</sup> From this information, we identified 36 programs and 402 centers that were operating in 2017.

Next, we created two separate samples from this set of programs and centers: (1) the Program and Center Component and (2) the Classroom, Family, and Child Component. As described in more detail below, the approach for collecting data differed for these two components. We mailed surveys to program and center directors for the Program and Center Component. For the Classroom, Family, and Child Component, we visited each center for about one week to observe classrooms, collect staff surveys, interview parents, and assess children.

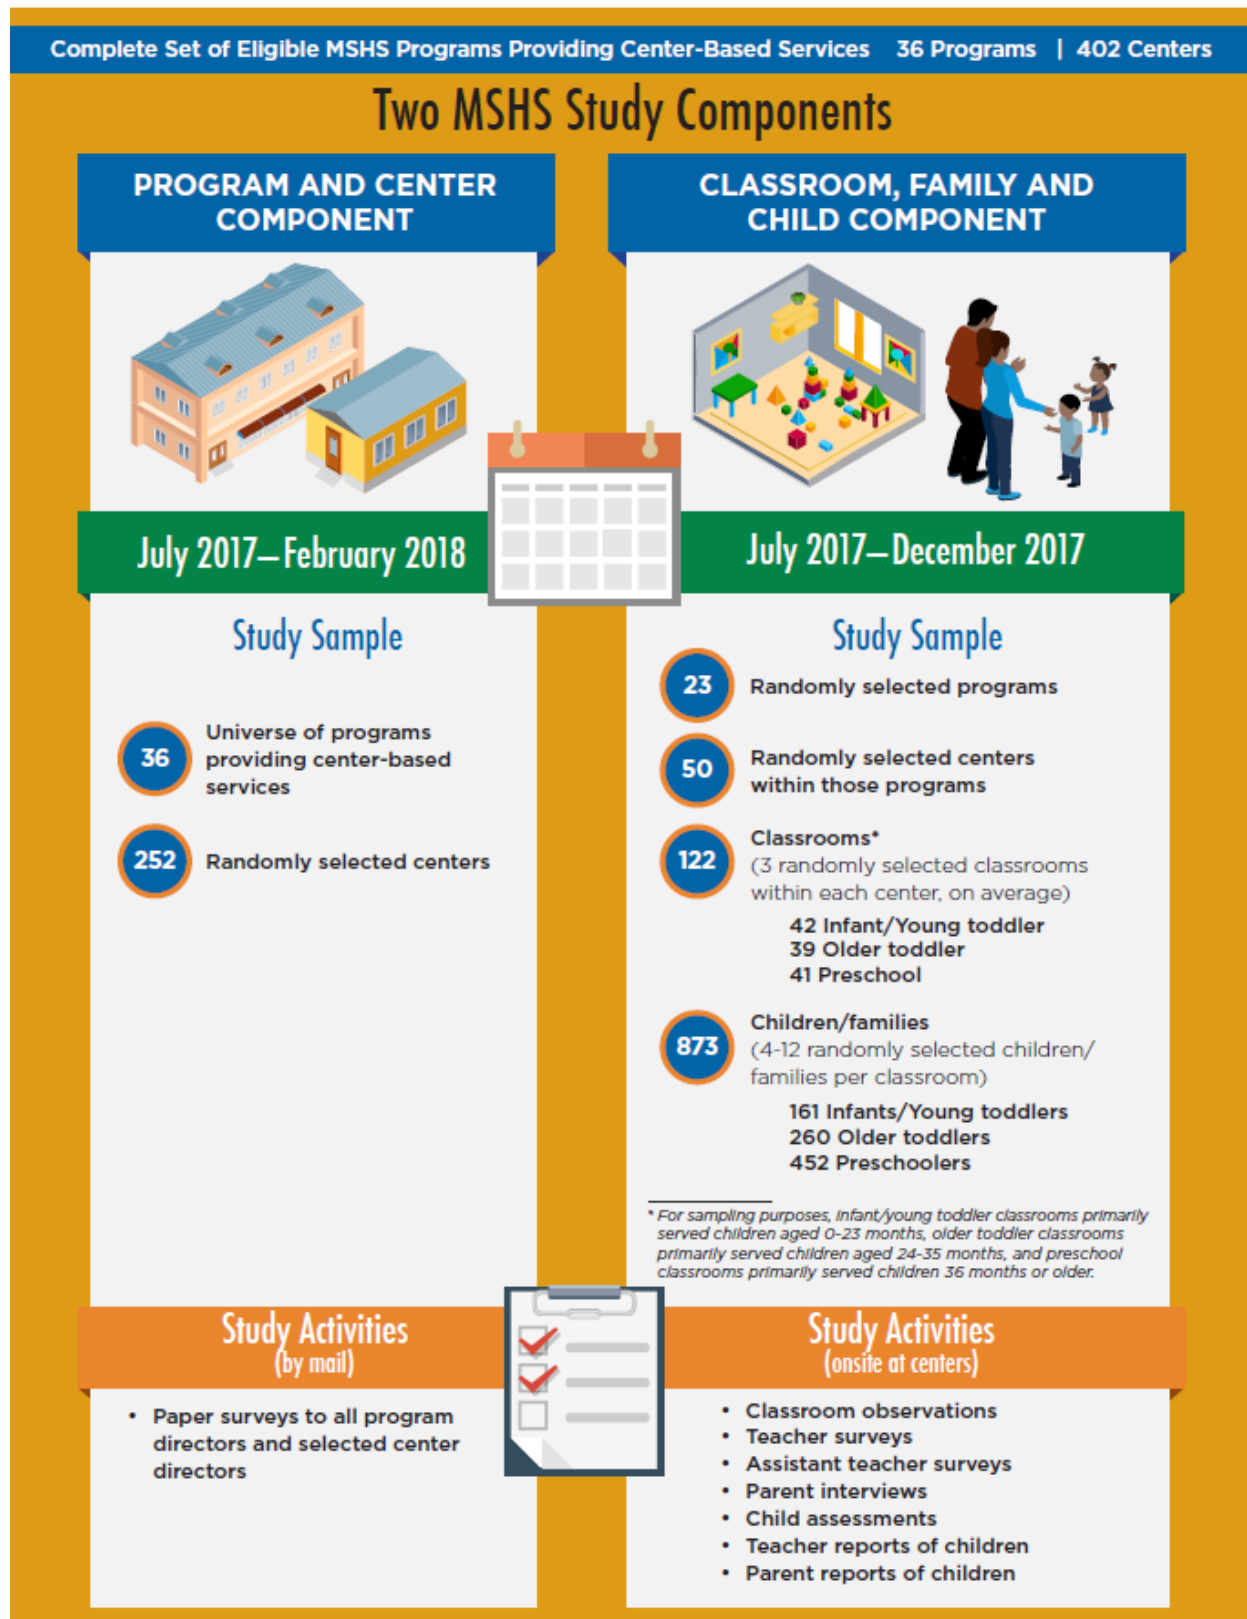

This sampling scheme is shown graphically in Exhibit 5 on the next page, followed by a discussion of each component.

---

<sup>15</sup> “Eligible programs” are those grantees or delegate agencies directly providing center-based services to children. For sampling purposes, we treated as a single program any grantee and delegate agency that operated together as a single administrative organization. The MSHS program also includes child care partner sites, groups that offer home-based services (including family child care), locally designed services, services to pregnant women, and programs and centers. We did not include these in the MSHS Study, nor entities no longer in operation when we began collecting data.

<sup>16</sup> The Head Start Enterprise System provides data on location, number of funded child slots, and child ages served by MSHS grantees and delegate agencies and their centers.

Exhibit 5. Complete Set of Eligible MSHS Programs and Study Samples

### **SAMPLE FOR PROGRAMS AND CENTERS**

Shown in the left panel of Exhibit 5 above, the study sample for the programs and centers consists of all eligible MSHS programs and a random selection of 252 centers operated by those programs across five geographic regions covering the 48 contiguous U.S. states (East, Midwest, Northwest, Southeast, and California/Southwest).<sup>17</sup> We worked to ensure that centers of different sizes were represented within each region and each program.

Between July 2017 and February 2018, the study team mailed:

- the Program Director Survey to all of the 36 eligible program directors.
- the Center Director Survey to the 252 selected centers' directors.

Exhibit 6 presents response rates for these measures.

Exhibit 6. Response Rates for Program and Center Component

Instrument	Number Sampled	Response Rate
Program Director Survey	36 programs (all)	88.9%
Center Director Survey	252 centers	79.8%

Notes: The response rate is unweighted. Unweighted response rates—number completed divided by total eligible—*do not* account for the sampling probability for Center Director Surveys. For more information on response rates, including weighted response rates, please see the *MSHS Study 2017 – 2018 Data User's Guide*.

### **SAMPLES FOR THE CLASSROOMS, FAMILIES, AND CHILDREN**

Shown in the right panel of Exhibit 5 above, the study samples for classrooms, families, and children consist of a selection of the eligible MSHS centers and their classrooms, staff, families, and children. We selected this sample in four stages:

- First, from the full set of eligible MSHS programs providing center-based services to children and families that were in operation in 2017, we selected 23 programs across the five geographic regions covering the 48 contiguous U.S. states (East, Midwest, Northwest, Southeast, and California/Southwest). We were careful to

<sup>17</sup> The study defined regions consistent with the National Agricultural Workers Survey (NAWS): **East:** Connecticut, Delaware, Kentucky, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, North Carolina, Pennsylvania, Rhode Island, Tennessee, Vermont, Virginia, West Virginia. **Midwest:** Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, Wisconsin. **Northwest:** Colorado, Idaho, Montana, Nevada, Oregon, Utah, Washington, Wyoming. **Southeast:** Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, South Carolina. **California/Southwest:** Arizona, California, New Mexico, Oklahoma, Texas.

ensure that programs of different sizes were represented within each geographic region.

- Second, within these 23 programs, we selected 50 centers, randomly selecting at least two centers from each program. Again, we were careful to ensure that centers of different sizes were represented within each program.
- Third, within these centers, we randomly selected 122 classrooms—42 infant/young toddler classrooms, 39 older toddler classrooms, and 41 preschool classrooms.
- Lastly, from these classrooms, we selected children and their families. The sample included a total of 873 children—161 infants/young toddlers, 260 older toddlers, and 452 preschoolers.

The study team collected information from these samples through on-site activities. Between July and December 2017, we visited each selected center for about one week. The measures included classroom-level information from observations; surveys of teachers and assistant teachers; interviews of parents; and child-level information from direct assessments, assessor ratings, parent reports of children, and teacher reports of children. Exhibit 7 presents response rates for these measures.

Exhibit 7. Response Rates for Classroom, Family, and Child Component

Instrument	Number Sampled	Response Rate
Classroom observation	122 classrooms	100.0%
Teacher survey	122 classrooms	97.5%
Assistant teacher survey	112 classrooms with assistant teachers	89.3%
Parent interview	778 families	83.1%
Direct assessments of children	703 older toddlers and preschoolers	81.5%
Ages & Stages Questionnaire, Third Edition (ASQ)	170 infants/young toddlers	85.7%
Parent report of child	873 children	77.2%
Teacher report of child	873 children	85.3%

Notes: The response rate is unweighted. Unweighted response rates—number completed divided by total eligible—do not account for the sampling probability. For more information on response rates, including weighted response rates, please see the *MSHS Study 2017 – 2018 Data User’s Guide*.

## ANALYSIS APPROACH

We used statistical software to apply weights to produce the national estimates for centers, classrooms, teachers, assistant teachers, families and children in the data tables. The analytic technique of weighting is used to allow each member of the sample

to represent a defined percentage of the population, based on its probability of selection and sample response rates.<sup>18</sup> For each reported result, each sample member's "weight" factor is multiplied by its observed data values to create population estimates.

Prior to using weighting methods, the data only represent the given sample. You can make statements like: "Thirty percent of respondents reported that MSHS teachers wear size 10 shoes." Once the data are weighted (based on the probability of selection from the population and the response rate), the data represent the entire MSHS program population. You can make statements like: "Thirty percent of MSHS teachers wear size 10 shoes."

If a particular question or response category did not receive a sufficient number of responses, the data should be interpreted with caution. To help readers interpret the precision of the estimates reported, data tables include the unweighted count of the sample size and the weighted standard errors.

The sample sizes and standard errors together provide information about the precision of the population estimates. Estimates are more precise for larger samples; estimates are also more precise when the standard error is smaller.

For more information about how the study team created and applied the weights, please see the *MSHS Study 2017-2018 Data User's Guide*. Additional information about weighting is also provided in the individual footnotes associated with the data tables.

### ***MSHS PROGRAM DATA***

Estimates presented in [Section C](#), collected with the Program Director Survey, are *unweighted*. The survey was mailed to *all* eligible program directors within MSHS (not just a sample of program directors). Due to the small size of this inclusive sample and the relatively small number of non-respondents, insufficient information was available to allow for correction of the raw data through weighting methods. Therefore, results from the MSHS Program Director Survey should be interpreted with caution as they might not fully represent the national MSHS picture.<sup>19</sup>

---

<sup>18</sup> For example, if 20% of children were selected for a study sample with equal probability, then each child in the sample would represent 5 children in the population (i.e., each child would have a weight of 5). In addition, if data are obtained for only 80% of sampled children, then those remaining in the sample represent 6.25 children ( $5/.80$  for a non-response adjusted weight of 6.25).

<sup>19</sup> Four program directors (11 percent) did not complete the survey. These program directors were each located in a different geographic region—East, Midwest, Southeast, and Northwest. These non-responding MSHS programs were also smaller in size, with a median of 191 funded enrollments slots and 3.5 centers per program, compared to a median of 284 funded enrollment slots and 5 centers per MSHS program overall.

***MSHS CENTER, CLASSROOM, STAFF, FAMILY, AND CHILD DATA***

Most information presented in the data tables on children ([Section A](#)), classrooms ([Section B](#)), centers ([Section D](#)), teachers ([Section E](#)), assistant teachers ([Section F](#)), and families ([Section G](#)) are based on *weighted* data. Once these data are weighted, they represent the national population of MSHS centers, classrooms, teachers, assistant teachers, families, and children in 2017. For more information about the construction and use of the analysis weights, see the *MSHS Study 2017 Data User Guide*.

## DATA TABLES

### GUIDANCE FOR INTERPRETING ALL DATA TABLES

The following considerations apply across all data tables. Three additional guidance sections are provided below to help readers interpret data tables about characteristics and skills of MSHS children ([Section A](#)), classroom quality ([Section B](#)), as well as staff surveys and the parent interview ([Sections C-G](#)).

- The MSHS Study was designed to answer all nine research questions listed in the [Introduction](#); however, the information presented in the data tables focuses only on a subset of them (e.g., data tables do not explore associations between variables). Data are archived for researchers to conduct secondary analyses and further explore all of the study research questions.
- A number of materials were developed specifically for the MSHS Study and are available for readers to have on hand when reviewing the data tables. These materials include all MSHS staff surveys, the parent interview protocol, questionnaires developed for the teacher reports of children about language dominance and proficiency, the questionnaire developed for the teacher report about children's disabilities and delays, and the MSHS Cultural Items and Language Use (CILU) Checklist observation tool.
- Statistics are weighted to represent characteristics for the population of MSHS centers, classrooms, teachers, assistant teachers, families, and children in 2017. However, the sample sizes (i.e., the  $n$  columns) represent unweighted sample sizes so that readers can identify the number of respondents with valid data on each of the items.
- Tables include sample sizes and standard errors or confidence intervals to provide information about the precision of estimates. Readers should be aware that estimates based on some sources (e.g., classroom observations; teacher surveys; assistant teacher surveys) or subsamples (e.g., preschool classrooms; teachers of infants) may have relatively large standard errors, and therefore lack precision.<sup>20</sup> These estimates should be interpreted with caution.

---

<sup>20</sup> Doubling the standard error produces the half-width of the 95 percent confidence interval for an estimate. For example, a standard error of 5.0 for an estimate of 25 percent (e.g., 25% of parents do agricultural work with vegetables) means that the 95 percent confidence interval spans 15 to 35 percent. Whereas a standard error of 2.0 for an estimate of 35 percent means that the 95 percent confidence interval spans 31 to 39 percent.

- To reduce the length of the tables in this report, we sometimes combine response options within a particular survey or interview question. We only combine those response options where 0 percent of the respondents selected the response option. For categorical variables that are ordered (e.g., months of the year), we only combine options when they are adjacent. For example, we might combine January and February if the both are 0 percent, but we would not combine January and October, even if they were 0 percent, because they are not adjacent.
- We computed Cronbach's alpha—a measure of reliability, or internal consistency—for direct assessments, teacher and parent reports, and classroom observations where possible, that is, where items were combined to create a total continuous score. We include information on reliability—the sample size used for the reliability calculation, the number of items, and Cronbach's alpha—in the first table that is presented for each instrument. The titles of the tables indicate that reliability information is included in the table and notes below the table explain the type of reliability information that is included and its location in the table (e.g., row, column and heading label). For ease of locating reliability information, in the [Child Measures](#) and [Classroom Measures](#) sections, we provide hyperlinks to the specific tables that include reliability estimates. We also computed Cronbach's alpha for the CES-D, which was included in the teacher survey, the assistant teacher survey and the parent interview. These reliability estimates are presented in the tables along with the summary statistics for the measure for each respondent (teacher, assistant teacher, or parent).
- Tables are organized by data source and level, beginning with child-level information (including direct assessments, assessor ratings, parent reports, and teacher reports—organized by domain), classroom-level information (via classroom observations), surveys (Program Director, Center Director, Teacher, Assistant Teacher), and finally the parent interview.

**SECTION A. CHARACTERISTICS AND SKILLS OF MSHS CHILDREN**

## ***GUIDANCE FOR INTERPRETING TABLES IN SECTION A. CHARACTERISTICS AND SKILLS OF MSHS CHILDREN***

This section presents data tables for all child measures used in the study. Before presenting the tables, we explain how the measures and tables are organized, provide a summary of each measure, and provide specific considerations for interpreting the child measures.

### **Organization of Measures and Data Tables**

The data tables are organized by domain, instrument, and age group. As shown in Exhibit 8, the data tables cover five domains. Within each domain, the information is presented according to the *instrument*. If the instrument was administered to multiple age groups, we present each instrument by *age group*. In such cases, we begin by presenting the largest possible group (e.g., all children). We then present separate tables for each individual age group, beginning with the youngest children (infants/young toddlers [0-23 months], older toddlers [24-35 months], or preschoolers [36 months and older]). Exhibit 8 provides an overview of the domains, instruments, and age groups—and serves as a roadmap to understanding how the data tables are presented below.

Exhibit 8. MSHS Study Child Measures, by Domain and Subdomain

Domain	Subdomain	Instrument	Mode	Age Group
Language and Early Literacy	Children's Language Dominance and Proficiency	Questionnaire developed for MSHS Study	• Teacher Report of Child	<ul style="list-style-type: none"> <li>• Infants and Young Toddlers (0 – 23 months)</li> <li>• Older Toddlers (24 – 35 Months)</li> <li>• Preschoolers (36+ Months)</li> </ul>
	Children's Expressive and Receptive Language	MacArthur-Bates (Communicative Development Inventory/Inventario del Desarrollo de Habilidades Comunicativas) Short Forms	• Parent and Teacher Report of Child	• Infants and Young Toddlers (8 – 23 months)
	Children's Nonverbal and Verbal Communication Skills	Ages and Stages Questionnaire (ASQ-3): Communication Subscale	• Teacher Report of Child	• Infants and Young Toddlers (0 – 23 months)
	Children's Auditory Comprehension	Preschool Language Scales-Fifth Edition: Auditory Comprehension Subscale, English and Spanish (Bilingual) Versions	• Direct Assessment	<ul style="list-style-type: none"> <li>• Older Toddlers (24 – 35 Months)</li> <li>• Preschoolers (36+ Months)</li> </ul>
	Children's Emergent Literacy Skills	Woodcock-Muñoz Language Survey-Revised Normative Update: Letter-Word Identification (English) and Identificación de letras y palabras (Spanish)	• Direct Assessment	• Preschoolers (36+ Months)

Domain	Subdomain	Instrument	Mode	Age Group
Socioemotional Skills and Behaviors	Children's Social-Emotional and Behavioral Problems and/or Delays	Brief Infant-Toddler Social and Emotional Assessment (BITSEA)	• Parent Report of Child	• Infants and Young Toddlers (12 — 23 months) • Older Toddlers (24–35 Months)
	Children's Socioemotional Skills and Behaviors	Early Childhood Longitudinal Study, Birth Cohort (ECLS-B)–Socioemotional Scale	• Parent Report of Child	• Preschoolers (36+ Months)
	Children's Approaches to Learning	Approaches to Learning	• Teacher Report of Child	• Preschoolers (36+ Months)
	Children's Emotional and Behavioral Regulation	Leiter-Third Edition Examiner Rating Scales	• Assessor Rating	• Preschoolers (36+ Months)
Math	Children's Counting Skills in English and Spanish		• Teacher Report of Child	• Older Toddlers (24 — 35 Months) • Preschoolers (36+ Months)
Health	Children's Height and Weight		• Direct Assessment	• Older Toddlers (24 — 35 Months) • Preschoolers (36+ Months)
Delays and Disabilities	Children's Delays and Disabilities	Questionnaire developed for MSHS Study	• Teacher Report of Child	• Infants and Young Toddlers (0 — 23 months) • Older Toddlers (24 — 35 Months) • Preschoolers (36+ Months)

For more detailed information about each child measure, please see the [Child Measures](#) section of the [Measures](#) chapter. For additional guidance that applies to interpreting all tables, see the [Guidance for Interpreting All Data Tables](#) section.

### Considerations for Interpreting Data Tables for Child Measures

- Tables include sample sizes and standard errors to provide information about the precision of estimates. Readers should be aware that when estimates for child assessments are provided for a particular subgroup (e.g., preschoolers), this may result in large standard errors, and therefore the estimates lack precision. These estimates should be interpreted with caution.

- We computed Cronbach’s alpha—a measure of reliability, or internal consistency—for direct assessments and teacher and parent reports where possible, that is, where items were combined to create a total continuous score.<sup>21</sup> We include information on reliability—the sample size used for the reliability calculation, the number of items, and Cronbach’s alpha—in the first table that is presented for each instrument. The titles of the tables indicate that reliability information is included in the table and the notes below the table explain the type of reliability information that is included and its location in the table (e.g., row, column and heading label). For ease of locating reliability information, in the [Child Measures](#) section, we provide hyperlinks to the specific tables that include reliability estimates.
- Questionnaires developed by the study team (including questionnaires about language dominance, language proficiency, disabilities, and delays within the teacher reports of children) are available online and may be helpful for readers to have on hand when reviewing the tables.<sup>22</sup>
- The number of respondents may not be consistent across measures because some measures were only administered to particular age groups (see Exhibit 8 above). Additionally, some tables provide information on a subset of children (e.g., infants and younger toddlers). Whenever an instrument was administered to multiple age groups, we first present information for the largest possible group (e.g., all children). Then, we present separate tables for each individual age group, beginning with the youngest children.
- The number of respondents may not be consistent across questions due to missing data or skip patterns. For the child-level information, this issue mainly applies to the questionnaires developed by the study team to measure language dominance, language proficiency, disabilities, and delays. When exploring data tables that present information from these questionnaires, readers should be careful to note when skip patterns were used. For example, some questions about language proficiency were only age-appropriate for infants. In cases like this, the table notes describe when questions were asked of respondents about particular age groups.

---

<sup>21</sup> Sample sizes for the Ages and Stages Questionnaire-3 assessment at each age level were too small to allow calculation of reliability.

<sup>22</sup> Other child assessment instruments are not publically available because the instruments are proprietary. More information about copyright permissions can be found in Appendix A.

- Finally, because the questionnaires used a paper-and-pencil format, skip patterns could not be enforced. When respondents answered a follow-up question that they should have skipped, their response to the follow-up question was set to missing. However, when respondents did not answer the gateway question (i.e., the question that instructed respondents to skip), their response to the follow-up question was left intact. Consequently, the number of responses to follow-up questions may sometimes be larger than expected based on the number of responses to gateway questions.

---

**DATA TABLES FOR SECTION A. CHARACTERISTICS AND SKILLS OF MSHS CHILDREN**

This section presents data tables for all child measures used in the study. Readers are encouraged to pay careful attention to the following information when reviewing information in this section:

- Notes and limitations applying to the MSHS child assessment data, which can be found in the section on [Guidance for Interpreting Tables in Section A. Characteristics of MSHS Children.](#)
- Information about each child measure that can be found in the [Child Measures](#) section of the [Measures](#) chapter.
- Footnotes provided below each table.

The constructs covered in this section include children's:

- Language Dominance and Proficiency ([Table A.1 – A.4](#))
- Expressive and Receptive Language ([Table A.5 – A.6](#))
- Nonverbal and Verbal Communication Skills ([Table A.7](#))
- Auditory Comprehension ([Table A.8 – A.10](#))
- Emergent Literacy Skills ([Table A.11 – A.12](#))
- Social-Emotional and Behavioral Problems and/or Delays ([Table A.13 – A.15](#))
- Socioemotional Skills and Behaviors ([Table A.16](#))
- Approaches to Learning ([Table A.17](#))
- Emotional and Behavioral Regulation ([Table A.18](#))
- Counting Skills in English and Spanish ([Table A.19 – A.21](#))
- Height and Weight ([Table A.22 – A.24](#))
- Delays and Disabilities ([Table A.25 – A.28](#))

Source: Child Languages and Development: Teacher Report, developed for the MSHS Study

Notes: Statistics are weighted to represent all children enrolled in MSHS in 2017.

The *n* columns in this table contain unweighted sample sizes to identify the number of children with valid data on the response category.

The sum of response categories across questions may not be consistent because of missing data at the item level.

For notes and limitations applying to the MSHS child assessment data, see [Guidance for Interpreting Tables in Section A. Characteristics of MSHS Children](#).

<sup>1</sup>SE is the standard error, which is a measure of the precision of the estimated population percentage for MSHS children in 2017.

<sup>2</sup>Teachers reported on these questions for all children in the sample (approximately birth through six years).

<sup>3</sup>Teachers reported on these questions only for children 12 months of age and older. Therefore, the sample size for these questions is smaller than the sample size for questions asked about all children.

<sup>4</sup>Teachers reported on these questions only for children 8 months of age and older. Therefore, the sample size for these questions is smaller than the sample size for questions asked about all children.

Not at all		2.2	0.89
Not well		14.0	1.89
Well		25.5	6.21
Very well		58.3	6.25
<b>How well does this child speak another language? (Respondent could specify any language other than English or Spanish)</b>	102		
Not at all		97.8	2.36
Not well		0.0	0.00
Well		2.2	2.36
Very well		0.0	0.00

Source: Child Languages and Development: Teacher Report, developed for the MSHS Study

Notes: Statistics are weighted to represent all preschoolers (children 36 months of age and older) enrolled in MSHS in 2017.

The *n* columns in this table contain unweighted sample sizes to identify the number of children with valid data on the response category.

The sum of response categories across questions may not be consistent because of missing data at the item level.

For notes and limitations applying to the MSHS child assessment data, see [Guidance for Interpreting Tables in Section A. Characteristics of MSHS Children](#).

<sup>1</sup>SE is the standard error, which is a measure of the precision of the estimated population percentage for MSHS children in 2017.

Table A.5. MSHS Children’s Expressive and Receptive Language: MacArthur-Bates Short Forms, Reliability Scores, Teacher and Parent Report, Infants/Younger Toddlers (8 to 23 months)

Scale	<i>n</i>	Number of Items	Cronbach’s Alpha
<b>MacArthur-Bates (Communicative Development Inventory/Inventario del Desarrollo de Habilidades Comunicativas) Short Forms – Teacher Report</b>

Words Produced Level 2, Spanish	49	100	0.97

Source: MacArthur-Bates (Communicative Development Inventory/Inventario del Desarrollo de Habilidades Comunicativas) (CDI/IDHC) Short Forms

Notes: This table presents the reliability of scores for these instruments. Reliability information is presented for both English and Spanish and includes the sample size (*n*), number of items included in the reliability estimates, and the Cronbach’s alpha, which is a measure of reliability, or internal consistency. Summary statistics are presented in the following tables.

Level 1 of the CDI Short Form is an 89-word checklist for English vocabulary comprehension and production (words understood, words produced) and is for children from 8 to 18 months old. Level 1 of the IDHC Short Form is a 104-word checklist for Spanish vocabulary comprehension and production (words understood, words produced) and is for children from 8 to 18 months old.

Level 2 of the CDI Short Form is a 100-word checklist for English vocabulary production (words produced) and is for children from 16 to 30 months old. Level 2 of the IDHC Short Form is a 100-word checklist for Spanish vocabulary production (words produced) and is for children from 16 to 30 months old.

Table A.6. MSHS Children's Expressive and Receptive Language: MacArthur-Bates Short Forms, Teacher and Parent Report, Infants/Younger Toddlers (8 to 23 months)

Scores and Percentiles <sup>1</sup>	Teacher Report				Parent Report				Possible Range of Scores
	<i>n</i>	Mean	<i>SE</i> <sup>2</sup>	Observed Range (Min — Max)	<i>n</i>	Mean	<i>SE</i> <sup>2</sup>	Observed Range (Min — Max)	
<b>Words Understood (Level 1)<sup>3</sup></b>

Spanish Raw Score (number of words)	47	14.5	1.80	2 — 46	49	22.2	2.99	1 — 85	0 — 100
Spanish Percentile Rank	47	25.2	3.38	5 — 75	49	37.3	3.65	5 — 95	5 — 99

Source: MacArthur-Bates (Communicative Development Inventory/Inventario del Desarrollo de Habilidades Comunicativas) (CDI/IDHC) Short Forms

Notes: Statistics are weighted to represent all infants/younger toddlers (children up to 23 months of age) enrolled in MSHS in 2017.

The *n* columns in this table contain unweighted sample sizes to identify the number of children with valid data on each of the constructs.

Teachers and parents reported only on infants/younger toddlers (children up to 23 months of age) for this measure (in both languages).

For notes and limitations applying to the MSHS child assessment data, see [Guidance for Interpreting Tables in Section A. Characteristics of MSHS Children](#).

<sup>1</sup>Percentile ranks range from 5 to 99 with 50 being the mean (average percentile rank). The developers' tables in published articles about validation of the short forms in English (CDI) and Spanish (IDHC) were used to arrive at percentile ranks. These tables separate scores by age, and separate tables are used for males and females (and both sexes combined, for the IDHC, Spanish version).

<sup>2</sup>*SE* is the standard error, which is a measure of the precision of the estimated population mean for MSHS children in 2017.

<sup>3</sup>Level 1 of the CDI Short Form is an 89-word checklist for English vocabulary comprehension and production (words understood, words produced) and is for children from 8 to 18 months old. Level 1 of the IDHC Short Form is a 104-word checklist for Spanish vocabulary comprehension and production (words understood, words produced) and is for children from 8 to 18 months old.

<sup>4</sup>Level 2 of the CDI Short Form is a 100-word checklist for English vocabulary production (words produced) and is for children from 16 to 30 months old. Level 2 of the IDHC Short Form is a 100-word checklist for Spanish vocabulary production (words produced) and is for children from 16 to 30 months old.

Table A.7. MSHS Children's Nonverbal and Verbal Communication Skills: Ages and Stages Questionnaire (ASQ-3), Teacher Report, Infants/Younger Toddlers (0 to 23 months)

Scores and Flags	<i>n</i>	Mean	Percentage (%) of Children	SE <sup>1</sup>	Observed Range (Min — Max)	Possible Range of Scores
Communication Subscale Raw Score	144	40.6	-	2.00	0 — 60	0 — 60
Percentage of Children with Scores in Referral Zone <sup>2</sup>	144	-	5.9	2.22	0 — 1	0 — 1
Percentage of Children with Scores in Monitoring Zone <sup>3</sup>	144	-	19.2	6.62	0 — 1	0 — 1

Source: Ages and Stages Questionnaire (ASQ-3): Communication Subscale

Notes: It was not possible to calculate reliability of the Ages and Stages Questionnaire-3 assessment because the sample sizes at each age level were too small.

Statistics are weighted to represent all infants/younger toddlers (children up to 23 months of age) enrolled in MSHS in 2017.

The *n* columns in this table contain unweighted sample sizes to identify the number of children with valid data on each of the constructs.

Teachers reported only on infants/younger toddlers (children up to 23 months of age) for this measure.

For notes and limitations applying to the MSHS child assessment data, see [Guidance for Interpreting Tables in Section A. Characteristics of MSHS Children](#).

Sample sizes for the Ages and Stages Questionnaire-3 assessment at each age level were too small to allow calculation of reliability.

<sup>1</sup>SE is the standard error, which is a measure of the precision of the estimated population mean and percentage for MSHS children in 2017.

<sup>2</sup>The ASQ Referral Zone is 2 or more standard deviations below the mean. If a child's score falls within the Referral Zone, further diagnostic assessment is recommended.

<sup>3</sup>The ASQ Monitoring Zone is > 1.0 and < 2.0 standard deviations below the mean. Children whose scores fall within the Monitoring Zone may require close attention, specialized activities, and/or repeat screening. Scores in the Monitoring Zone do not indicate a need for further assessment.

**Table A.8. MSHS Children’s Auditory Comprehension: Preschool Language Scales-Fifth Edition (PLS-5), Reliability and Summary Scores, Direct Assessment, Older Toddlers/Preschoolers (24 months and older)**

Scale	<i>n</i>	Number of Items	Cronbach’s Alpha	Mean	<i>SE</i> <sup>1</sup>	Observed Range (Min — Max)	Possible Range of Scores
<b>English Version</b>	51	65	0.96				
Standard Score <sup>2</sup>		-	-	88.2	4.86	50 — 122	50 — 150
Percentile <sup>3</sup>		-	-	31.5	7.98	1 — 93	1 — 99
<b>Spanish (Bilingual) Version</b>	489	67	0.95				
Standard Score <sup>2</sup>		-	-	103.5	0.51	50 — 140	50 — 150
Percentile <sup>3</sup>		-	-	57.8	1.00	1 — 99	1 — 99

Source: Preschool Language Scales-Fifth Edition (PLS-5): Auditory Comprehension Subscale, English and Spanish (Bilingual) Versions

Notes: This table presents both the reliability of scores and summary statistics for these instruments. Reliability information is presented in the first shaded row for both the English and Spanish (Bilingual) versions and includes the sample size (*n*), number of items included in the reliability estimates, and the Cronbach’s alpha, which is a measure of reliability, or internal consistency. Summary statistics are presented in the unshaded rows below the reliability information.

Statistics are weighted to represent all older toddlers and preschoolers (children 24 months of age and older) enrolled in MSHS in 2017.

The *n* columns in this table contain unweighted sample sizes to identify the number of children with valid data on each of the constructs.

Language dominance was determined from information the parents provided in the consent form about which language(s) their child(ren) spoke and/or understood. Children whose parents indicated that they spoke or understood any Spanish were assessed using the Spanish (Bilingual) PLS-5. All others were assessed using the English version.

For notes and limitations applying to the MSHS child assessment data, see [Guidance for Interpreting Tables in Section A. Characteristics of MSHS Children](#).

<sup>1</sup>*SE* is the standard error, which is a measure of the precision of the estimated population mean for MSHS children in 2017.

<sup>2</sup>The standard score is based on a mean of 100 and a standard deviation of 15. The publisher’s tables (either English or Spanish) were used to arrive at standard scores.

<sup>3</sup>Percentile rank describes performance relative to the performance of a segment of the norming sample at the same age. Percentile ranks range from < 0.1 to 99.9 with a mean (average percentile rank) of 50. A child who achieves a percentile rank of 25 performs as well or better than 25% of children in the norming sample of the same age. The publisher’s tables (English or Spanish) were used to arrive at percentile rank.

Table A.9. MSHS Children's Auditory Comprehension: Preschool Language Scales-Fifth Edition (PLS-5), Direct Assessment, Older Toddlers (24 to 35 months)

Scale	<i>n</i>	Mean	SE <sup>1</sup>	Observed Range (Min — Max)	Possible Range of Scores
<b>English Version</b>					
Standard Score <sup>2</sup>	22	82.0	6.30	50 — 109	50 — 150
Percentile <sup>3</sup>	22	23.6	6.58	1 — 73	1 — 99
<b>Spanish (Bilingual) Version</b>					
Standard Score <sup>2</sup>	181	102.8	1.10	53 — 139	50 — 150
Percentile <sup>3</sup>	181	57.0	1.79	1 — 99	1 — 99

Source: Preschool Language Scales-Fifth Edition (PLS-5): Auditory Comprehension Subscale, English and Spanish (Bilingual) Versions

Notes: Statistics are weighted to represent all older toddlers and preschoolers (children 23 months of age and older) enrolled in MSHS in 2017.

The *n* columns in this table contain unweighted sample sizes to identify the number of children with valid data on each of the constructs.

Language dominance was determined from information the parents provided in the consent form about which language(s) their child(ren) spoke and/or understood. Children whose parents indicated that they spoke or understood any Spanish were assessed using the Spanish (Bilingual) PLS-5. All others were assessed using the English version.

For notes and limitations applying to the MSHS child assessment data, see [Guidance for Interpreting Tables in Section A. Characteristics of MSHS Children](#).

<sup>1</sup>SE is the standard error, which is a measure of the precision of the estimated population mean for MSHS children in 2017.

<sup>2</sup>The standard score is based on a mean of 100 and a standard deviation of 15. The publisher's tables (either English or Spanish) were used to arrive at standard scores.

<sup>3</sup>Percentile rank describes performance relative to the performance of a segment of the norming sample at the same age. Percentile ranks range from < 0.1 to 99.9 with a mean (average percentile rank) of 50. A child who achieves a percentile rank of 25 performs as well or better than 25% of children in the norming sample of the same age. The publisher's tables (English or Spanish) were used to arrive at percentile rank.

Table A.10. MSHS Children's Auditory Comprehension: Preschool Language Scales-Fifth Edition (PLS-5), Direct Assessment, Preschoolers (36 months and older)

Scale	<i>n</i>	Mean	<i>SE</i> <sup>1</sup>	Observed Range (Min — Max)	Possible Range of Scores
<b>English Version</b>					
Standard Score <sup>2</sup>	29	91.4	5.55	50 — 122	50 — 150
Percentile <sup>3</sup>	29	35.6	10.07	1 — 93	1 — 99

<sup>1</sup>*SE* is the standard error, which is a measure of the precision of the estimated population mean for MSHS children in 2017.

<sup>2</sup>The standard score is based on a mean of 100 and a standard deviation of 15. The publisher's tables (either English or Spanish) were used to arrive at standard scores.

<sup>3</sup>Percentile rank describes performance relative to the performance of a segment of the norming sample at the same age. Percentile ranks range from < 0.1 to 99.9 with a mean (average percentile rank) of 50. A child who achieves a percentile rank of 25 performs as well or better than 25% of children in the norming sample of the same age. The publisher's tables (English or Spanish) were used to arrive at percentile rank.

Table A.11. MSHS Children's Emergent Literacy Skills: Woodcock-Muñoz Language Survey-Revised, Reliability and Summary Scores, Direct Assessment, Preschoolers (36 months and older)

Scale	<i>n</i>	Number of Items	Cronbach's Alpha	Mean	<i>SE</i> <sup>1</sup>	Observed Range (Min — Max)	Possible Range of Scores
<b>English</b>	346	75	0.87				
Standard Score <sup>2</sup>				83.5	1.01	32 — 134	0 — 200
Percentile <sup>3</sup>				20.5	1.54	0 — 99	0 — 99
W Score <sup>4</sup>				293.7	1.76	256 — 462	256 — 565
Relative Proficiency Index (RPI) <sup>5</sup>				36.7	2.87	0 — 100	0 — 100
<b>Spanish</b>	345	75	0.85				
Standard Score <sup>2</sup>				95.5	0.65	45 — 137	0 — 200
Percentile <sup>3</sup>				41.1	1.47	0 — 99	0 — 99
W Score <sup>4</sup>				315.9	2.50	277 — 467	277 — 564
Relative Proficiency Index (RPI) <sup>5</sup>				67.3	1.92	0 — 100	0 — 100

Source: Woodcock-Muñoz Language Survey-Revised Normative Update (WMLS-R NU): Letter-Word Identification (English) and Identificación de letras y palabras (Spanish)

Notes: This table presents both the reliability of scores and summary statistics for these instruments. Reliability information is presented in the first shaded row for both the English and Spanish (Bilingual) versions and includes the sample size (*n*), number of items included in the reliability estimates, and the Cronbach's alpha, which is a measure of reliability, or internal consistency. Summary statistics are presented in the unshaded rows below the reliability information.

Statistics are weighted to represent all preschoolers (children 36 months of age and older) enrolled in MSHS in 2017. The *n* columns in this table contain unweighted sample sizes to identify the number of children with valid data on each of the constructs.

The WMLS-R NU was administered to all preschool-age children (36 months and older). For those whose parents indicated that they spoke or understood any Spanish at all, the Spanish version was administered first; for all others, the English version was administered first.

For notes and limitations applying to the MSHS child assessment data, see [Guidance for Interpreting Tables in Section A. Characteristics of MSHS Children](#).

<sup>1</sup>*SE* is the standard error, which is a measure of the precision of the estimated population mean for MSHS children in 2017.

<sup>2</sup>The standard score is based on a mean of 100 and a standard deviation of 15. The publisher's scoring software was used to compute standard scores.

<sup>3</sup>Percentile rank describes performance on a scale from 1 to 99 relative to the performance of a segment of the norming sample at the same age. A child who achieves a percentile rank of 25 performs as well or better than 25% of children in the norming sample of the same age. The publisher's scoring software was used to compute percentile ranks.

<sup>4</sup>The *W* scale is a statistical transformation that provides an equal-interval scale representing the ability of a person in an area being measured and the difficulty of the tasks that are sampled on the test. The *W* scale for each test is centered on a value of 500, set to approximate the average performance of 10-year old children. The publisher's scoring software was used to compute *W* scores.

<sup>5</sup>The RPI is based on the distance along the *W* scale that a subject's score falls. The RPI predicts a child's percentage of success (the numerator of the index) on the selected tasks that children of the same age would perform with 90% success (the denominator of the index). An RPI of 67/90 would predict that the child could perform with 67% success those tasks that average children of the same age perform with 90% success. The values presented in the table are the numerator values only (with the denominator assumed to be 90). The RPI was computed using the publisher's scoring software.

Table A.12. MSHS Children's Emergent Literacy Skills: Woodcock-Muñoz Language Survey-Revised, Direct Assessment, Preschoolers (36 months and older)

Cognitive-Academic Language Proficiency (CALP) Level <sup>1</sup>	<i>n</i>	Percentage (%) of Children	<i>SE</i> <sup>2</sup>
<b>English</b>	346		
Negligible		15.0	2.89
Very Limited		33.3	3.43
Limited		25.6	2.68
Limited to Fluent		11.1	2.10
Fluent		7.9	1.89
Fluent to Advanced		2.8	1.17
Advanced		2.5	0.89
Very Advanced		1.8	1.00
<b>Spanish</b>	345		
Negligible		2.7	0.94
Very Limited		10.1	1.80
Limited		25.7	3.26
Limited to Fluent		11.5	2.03
Fluent		21.9	2.35
Fluent to Advanced		9.8	1.86
Advanced		12.8	3.14
Very Advanced		5.5	1.62

Source: Woodcock-Muñoz Language Survey-Revised Normative Update (WMLS-R NU): Letter-Word Identification (English) and Identificación de letras y palabras (Spanish)

Notes: Statistics are weighted to represent all preschoolers (children 36 months of age and older) enrolled in MSHS in 2017. The *n* columns in this table contain unweighted sample sizes to identify the number of children with valid data on each of the constructs.

For notes and limitations applying to the MSHS child assessment data, see [Guidance for Interpreting Tables in Section A. Characteristics of MSHS Children](#).

<sup>1</sup>RPI ranges correspond to levels of Cognitive-Academic Language Proficiency (CALP) as follow (RPI ranges in parentheses): Very Advanced (100/90), Advanced (98/90 to 100/90), Fluent to Advanced (95/90 to 98/90), Fluent (82/90 to 95/90), Limited to Fluent (67/90 to 82/90), Limited (24/90 to 67/90), Very Limited (3/90 to 24/90), Negligible (0/90 to 3/90). Note that the CALP levels are language-specific. Please see p. 61 of the WMLS-R Comprehensive Manual (2005) for further detail on interpreting CALP levels.

<sup>2</sup>*SE* is the standard error, which is a measure of the precision of the estimated population percentage for MSHS children in 2017.

Table A.13. MSHS Children's Social-Emotional and Behavioral Problems and/or Delays: Brief Infant-Toddler Social and Emotional Assessment (BITSEA), Reliability and Summary Scores, Parent Report, Infants/Younger Toddlers and Older Toddlers (12 to 35 months)

Scores and Flags	<i>n</i>	Number of Items	Cronbach's Alpha	Mean	Percentage (%) of Children	SE <sup>1</sup>	Observed Range (Min — Max)	Possible Range of Scores
<b>Social-Emotional/Behavioral Problem Scale<sup>2</sup></b>	291 <sup>3</sup>	31	0.78					
Raw Score	303	-	-	10.8	-	0.69	0 — 46	0 — 62
Percentage of children with scores in the range for Possible Problems	303	-	-	-	28.0	3.69	0 — 1	0 — 1
<b>Social-Emotional Competence Scale<sup>4</sup></b>	301 <sup>3</sup>	11	0.70					
Raw Score	305	-	-	17.5	-	0.39	8 — 22	0 — 22
Percentage of children with scores in the range for Possible Deficits/Delay	305	-	-	-	16.7	3.06	0 — 1	0 — 1

Source: Brief Infant-Toddler Social and Emotional Assessment (BITSEA)

Notes: This table presents both the reliability of scores and summary statistics for the Problem Scale and the Competence Scale. Reliability information is presented in the first shaded row for both scales and includes the sample size (*n*), number of items included in the reliability estimate, and the Cronbach's alpha, which is a measure of reliability, or internal consistency. Summary statistics are presented in the unshaded rows below the reliability information.

Statistics are weighted to represent all infants/younger toddlers and older toddlers (children up to 35 months of age) enrolled in MSHS in 2017.

The *n* columns in this table contain unweighted sample sizes to identify the number of children with valid data on each of the constructs.

For notes and limitations applying to the MSHS child assessment data, see [Guidance for Interpreting Tables in Section A. Characteristics of MSHS Children](#).

<sup>1</sup>SE is the standard error, which is a measure of the precision of the estimated population mean and percentage for MSHS children in 2017.

<sup>2</sup>The BITSEA Problem Scale is a measure of social-emotional /behavioral problems that comprises 31 items scored 0 (not true/rarely), 1 (somewhat true/sometimes), or 2 (very true/often). Items are summed to arrive at the Problem Scale raw score. Cut scores for determining Possible Problems are set at the 25<sup>th</sup> percentile of the Problem Scale raw score. If a child's raw score is equal to or greater than the cut score for the child's age group and gender, then the child's score is in the Possible Problem range. The publisher's cut score table was used to arrive at the designation.

<sup>3</sup>The sample sizes for reliability estimates include only cases with non-missing values on all items on the scale and thus are smaller than the sample sizes for the summary statistics, which include all cases, regardless of item-level missingness.

<sup>4</sup>The BITSEA Competence Scale is a measure of social-emotional competence that comprises 11 items scored 0 (not true/rarely), 1 (somewhat true/sometimes), or 2 (very true/often). Items are summed for the raw score to arrive at the Competence Scale raw score. Cut scores for determining Possible Deficit/Delay are set at the 15<sup>th</sup> percentile of the Competence Scale raw score. If a child's raw score is equal to or less than the cut score for the child's age group and gender, then the child's score is in the Possible Deficit/Delay range. The publisher's cut score table was used to arrive at the designation.

Table A.14. MSHS Children's Social-Emotional and Behavioral Problems and/or Delays: Brief Infant-Toddler Social and Emotional Assessment (BITSEA), Parent Report, Infants/Younger Toddlers (12 to 23 months)

Scores and Flags	<i>n</i>	Mean	Percentage (%) of Children	SE <sup>1</sup>	Observed Range (Min — Max)	Possible Range of Scores
<b>Social-Emotional/Behavioral Problems<sup>2</sup></b>						
Raw Score	93	10.6	-	1.00	2 — 30	0 — 62
Percentage of children with scores in the zone for Possible Problems	93	-	29.8	6.39	0 — 1	0 — 1
<b>Social-Emotional Competence<sup>3</sup></b>						
Raw Score	93	17.1	-	0.65	8 — 22	0 — 22
Percentage of children with scores in the Zone for Possible Deficit/Delay	93	-	14.9	4.11	0 — 1	0 — 1

Source: Brief Infant-Toddler Social and Emotional Assessment (BITSEA)

Notes: Statistics are weighted to represent all infants/younger toddlers (children up to 23 months of age) enrolled in MSHS in 2017.

The *n* columns in this table contain unweighted sample sizes to identify the number of children with valid data on each of the constructs.

For notes and limitations applying to the MSHS child assessment data, see [Guidance for Interpreting Tables in Section A. Characteristics of MSHS Children](#).

<sup>1</sup>SE is the standard error, which is a measure of the precision of the estimated population mean and percentage for MSHS children in 2017.

<sup>2</sup>The BITSEA Problem Scale is a measure of social-emotional /behavioral problems that comprises 31 items scored 0 (not true/rarely), 1 (somewhat true/sometimes), or 2 (very true/often). Items are summed to arrive at the Problem Scale raw score. Cut scores for determining Possible Problems are set at the 25<sup>th</sup> percentile of the Problem Scale raw score. If a child's raw score is equal to or greater than the cut score for the child's age group and gender, then the child's score is in the Possible Problem range. The publisher's cut score table was used to arrive at the designation.

<sup>3</sup>The BITSEA Competence Scale is a measure of social-emotional competence that comprises 11 items scored 0 (not true/rarely), 1 (somewhat true/sometimes), or 2 (very true/often). Items are summed for the raw score to arrive at the Competence Scale raw score. Cut scores for determining Possible Deficit/Delay are set at the 15<sup>th</sup> percentile of the Competence Scale raw score. If a child's raw score is equal to or less than the cut score for the child's age group and gender, then the child's score is in the Possible Deficit/Delay range. The publisher's cut score table was used to arrive at the designation.

Table A.15. MSHS Children's Social-Emotional and Behavioral Problems and/or Delays: Brief Infant-Toddler Social and Emotional Assessment (BITSEA), Parent Report, Older Toddlers (24 to 35 months)

Scores and Flags	<i>n</i>	Mean	Percentage (%) of Children	<i>SE</i> <sup>1</sup>	Observed Range (Min — Max)	Possible Range of Scores
<b>Social-Emotional/Behavioral Problems<sup>2</sup></b>						
Raw Score	210	10.9	-	0.65	0 — 46	0 — 62
Percentage of children with scores in the zone for Possible Problems	210	-	26.6	3.18	0 — 1	0 — 1
<b>Social-Emotional Competence<sup>3</sup></b>						
Raw Score	212	17.8	-	0.36	9 — 22	0 — 22
Percentage of children with scores in the Zone for Possible Deficit/Delay	212	-	18.2	3.68	0 — 1	0 — 1

Source: Brief Infant-Toddler Social and Emotional Assessment (BITSEA)

Notes: Statistics are weighted to represent all older toddlers (children 24 — 35 months of age) enrolled in MSHS in 2017.

The *n* columns in this table contain unweighted sample sizes to identify the number of children with valid data on each of the constructs.

For notes and limitations applying to the MSHS child assessment data, see [Guidance for Interpreting Tables in Section A. Characteristics of MSHS Children](#).

<sup>1</sup>*SE* is the standard error, which is a measure of the precision of the estimated population mean and percentage for MSHS children in 2017.

<sup>2</sup>The BITSEA Problem Scale is a measure of social-emotional /behavioral problems that comprises 31 items scored 0 (not true/rarely), 1 (somewhat true/sometimes), or 2 (very true/often). Items are summed to arrive at the Problem Scale raw score. Cut scores for determining Possible Problems are set at the 25<sup>th</sup> percentile of the Problem Scale raw score. If a child's raw score is equal to or greater than the cut score for the child's age group and gender, then the child's score is in the Possible Problem range. The publisher's cut score table was used to arrive at the designation.

<sup>3</sup>The BITSEA Competence Scale is a measure of social-emotional competence that comprises 11 items scored 0 (not true/rarely), 1 (somewhat true/sometimes), or 2 (very true/often). Items are summed for the raw score to arrive at the Competence Scale raw score. Cut scores for determining Possible Deficit/Delay are set at the 15<sup>th</sup> percentile of the Competence Scale raw score. If a child's raw score is equal to or less than the cut score for the child's age group and gender, then the child's score is in the Possible Deficit/Delay range. The publisher's cut score table was used to arrive at the designation.

Table A.16. MSHS Children's Socioemotional Skills and Behaviors: Items from Early Childhood Longitudinal Study, Birth Cohort (ECLS-B), Parent Report, Preschoolers (36 months and older)

Items	<i>n</i>	Percentage (%) of Children	<i>SE</i> <sup>1</sup>
<b>Is invited by other children to play</b>	338		
Never		1.7	0.60
Rarely		3.1	1.18
Sometimes		25.9	1.99

Very Often		50.1	4.01

Source: Early Childhood Longitudinal Study-Birth Cohort (ECLS-B), Preschool Wave. Includes items developed by the ECLS-B study team, as well as items from two existing instruments: The Preschool and Kindergarten Behavior Scales, Second Edition [PKBS-2] and the Social Skills Rating System [SSRS]. For more information on the source for each item, see <https://nces.ed.gov/pubs2010/2010009.pdf>

Notes: Statistics are weighted to represent all preschoolers (children 36 months of age and older) enrolled in MSHS in 2017. The *n* columns in this table contain unweighted sample sizes to identify the number of children with valid data on the response category.

The sum of response categories across questions may not be consistent because of missing data at the item level.

For notes and limitations applying to the MSHS child assessment data, see [Guidance for Interpreting Tables in Section A. Characteristics of MSHS Children](#).

<sup>1</sup>*SE* is the standard error, which is a measure of the precision of the estimated population percentage for MSHS children in 2017.

Table A.17. MSHS Children's Approaches to Learning: Approaches to Learning Scale, Reliability and Summary Scores, Teacher Report, Preschoolers (36 months and older)

Score	<i>n</i>	Number of Items	Cronbach's Alpha	Mean	SE <sup>1</sup>	Observed Range (Min — Max)	Possible Range of Scores
Raw Score	364 <sup>2</sup>	6	0.90	2.9	0.10	1 — 4	1 — 4

Source: Early Childhood Longitudinal Study-Kindergarten Cohort (ECLS-K), Kindergarten through Fifth Grade Waves, Approaches to Learning Scale

Notes: This measure consists of six questions that gauge attention, organization, adaptation to routines, task persistence, and task interest and orientation. Higher scores indicate more positive learning behaviors. Teachers' ratings of the frequency of the child's approaches to learning tasks were scored as Never=1, Sometimes=2, Often=3, Very Often=4.

This table presents both the reliability of scores and summary statistics for this instrument. Reliability information is presented in the first shaded row and includes the sample size (*n*), number of items included in the reliability estimate, and the Cronbach's alpha, which is a measure of reliability, or internal consistency. Summary statistics are presented in the unshaded row below the reliability information.

Statistics are weighted to represent all preschoolers (children 36 months of age and older) enrolled in MSHS in 2017.

The *n* columns in this table contain unweighted sample sizes to identify the number of children with valid data on each of the constructs.

For notes and limitations applying to the MSHS child assessment data, see [Guidance for Interpreting Tables in Section A. Characteristics of MSHS Children](#).

<sup>1</sup>SE is the standard error, which is a measure of the precision of the estimated population mean for MSHS children in 2017.

<sup>2</sup>The sample size for the reliability estimate includes only cases with non-missing values on all items on the scale (*n*=360) and thus is smaller than the sample size for the summary statistics, which includes all cases, regardless of item-level missingness.

Table A.18. MSHS Children's Emotional and Behavioral Regulation: Leiter-Third Edition, Reliability and Summary Scores, Assessor rating, Preschoolers (36 months and older)

Scale	<i>n</i>	Number of Items	Cronbach's Alpha	Mean	SE <sup>1</sup>	Observed Range (Min — Max)	Possible Range of Scores
<b>Subscales</b>							
Raw Scores							
Subscale A. Attention	343	10	0.96	22.5	0.32	0 — 30	0 — 30
Subscale B. Organization/Impulse Control	343	8	0.91	17.7	0.20	0 — 24	0 — 24
Subscale C. Activity Level	343	4	0.88	9.0	0.15	0 — 12	0 — 12
Subscale D. Sociability	343	5	0.85	13.7	0.08	2 — 15	0 — 15
Subscale E. Energy & Feelings	343	6	0.90	15.7	0.22	2 — 18	0 — 18
Subscale F. Regulation	343	6	0.91	16.0	0.15	0 — 18	0 — 18
Subscale G. Anxiety	342	6	0.90	15.6	0.16	1 — 18	0 — 18
Subscale H. Sensory Reaction	342	4	0.88	9.9	0.09	0 — 12	0 — 12
Scaled Scores <sup>2</sup>							
Subscale A. Attention	343	-	-	9.8	0.13	2 — 14	0 — 14
Subscale B. Organization/Impulse Control	343	-	-	9.9	0.15	2 — 14	0 — 14
Subscale E. Energy & Feelings	343	-	-	9.7	0.18	3 — 12	0 — 12
Subscale G. Anxiety	342	-	-	9.7	0.14	3 — 12	0 — 12
Composites <sup>3</sup>							
Cognitive/Social Composite: Scaled Score	343	4	0.87	112.7	1.36	62 — 158	0 — 158
Emotions/Regulations Composite: Scaled Score	342	4	0.91	103.2	1.09	59 — 124	0 — 124

Source: Leiter-Third Edition Examiner Rating Scales

Notes: The Leiter-3 measures children's emotional and behavioral regulation. The instrument is composed of eight subscales that ask the assessor to rate the child's attention, activity level, self-regulation, and sociability. Items within subscales are rated as 0=Rarely/Never, 1=Sometimes; 2=Often; 3=Usually/Always. The subscales are (A) Attention; (B) Organization/Impulse Control; (C) Activity Level; (D) Sociability; (E) Energy and Feelings; (F) Regulation and Mood Regulation; (G) Anxiety; and (H) Sensory Reactivity. In addition, the assessor completes a checklist indicating whether the child exhibited any of seven Severe Behaviors during the assessment session.

This table presents both the reliability of scores and summary statistics for this instrument. Reliability information is presented in the second through fourth columns of the table and includes the sample size (*n*), number of items included in the reliability estimates, and the Cronbach's alpha, which is a measure of reliability, or internal consistency. Summary statistics are presented in the remaining columns.

Statistics are weighted to represent all preschoolers (children 36 months of age and older) enrolled in MSHS in 2017.

The *n* columns in this table contain unweighted sample sizes to identify the number of children with valid data on each of the constructs.

For notes and limitations applying to the MSHS child assessment data, see [Guidance for Interpreting Tables in Section A. Characteristics of MSHS Children](#).

<sup>1</sup>SE is the standard error, which is a measure of the precision of the estimated population mean for MSHS children in 2017.

<sup>2</sup>Each subscale has a mean of 10, and a standard deviation of 3. Scaled scores are not available for subscales C, D, F, and H.

<sup>3</sup>Each composite has a mean of 100 and a standard deviation of 15. The Leiter-Third Edition Cognitive/Social Composite comprises Subscales A, B, C and D. The Emotions/Regulations Composite comprises Subscales E, F, G and H.

Table A.19. MSHS Children's Counting Skills in English and Spanish: Teacher Report, Older Toddlers/Preschoolers (24 months and older)

<sup>1</sup>SE is the standard error, which is a measure of the precision of the estimated population percentage for MSHS children in 2017.

Table A.22. MSHS Children's Height and Weight: Direct Assessment, Older Toddlers/Preschoolers (24 months and older)

Height and Weight Measures <sup>2</sup>	<i>n</i>	Mean	Percentage (%) of Children	SE <sup>1</sup>	Observed Range (Min — Max)	Possible Range of Scores
Height: Percentile Rank	542	55.4	-	2.30	0.1 — 100	0 — 100
Weight: Percentile Rank	542	61.7	-	2.35	0.6 — 100	0 — 100
Body Mass Index (BMI): Percentile Rank	542	63.8	-	1.80	0.0 — 100	0 — 100
<b>BMI Categories<sup>3</sup></b>	542					
Child is Underweight	-	-	2.3	0.51	-	-
Child is Normal Weight	-	-	66.8	2.56	-	-
Child is Overweight	-	-	14.9	1.74	-	-
Child is Obese	-	-	16.0	2.30	-	-

Notes: Statistics are weighted to represent all older toddlers and preschoolers (children 24 months of age and older) enrolled in MSHS in 2017.

The *n* columns in this table contain unweighted sample sizes to identify the number of children with valid data on each of the constructs.

For notes and limitations applying to the MSHS child assessment data, see [Guidance for Interpreting Tables in Section A. Characteristics of MSHS Children](#).

<sup>1</sup>SE is the standard error, which is a measure of the precision of the estimated population mean or percentage for MSHS children in 2017.

<sup>2</sup>Biologically implausible weight, height, and BMI values were identified based on extrapolating one-half of the distance between 0 and +2 z-scores to both tails of the distribution. These implausible values are likely the result of measurement error. When a child's weight, height, or BMI were identified as biologically implausible, all three values were set to missing. This was the case for 19 children.

<sup>3</sup>According to the Centers for Disease Control and Prevention (CDC), a child is considered to be underweight when his/her BMI score is below the 5<sup>th</sup> percentile for his/her age and gender, normal weight when his/her BMI score is at or above the 5<sup>th</sup> percentile and below the 85<sup>th</sup> percentile for his/her age and gender, overweight when his/her BMI score is at or above the 85<sup>th</sup> percentile and below the 95<sup>th</sup> for his/her age and gender, and obese when his/her BMI score is at or above the 95<sup>th</sup> percentile for his/her age and gender.

Table A.23. MSHS Children's Height and Weight: Direct Assessment, Older Toddlers (24 to 35 months)

Height and Weight Measures <sup>2</sup>	<i>n</i>	Mean	Percentage (%) of Children	<i>SE</i> <sup>1</sup>	Observed Range (Min — Max)	Possible Range of Scores
Height: Percentile Rank	206	56.6	-	2.58	0.4 — 99.7	0 — 100
Weight: Percentile Rank	206	61.2	-	2.47	0.8 — 100	0 — 100
Body Mass Index (BMI): Percentile Rank	206	61.5	-	2.79	0.3 — 100	0 — 100
BMI Categories <sup>3</sup>	206					
Child is Underweight	-	-	3.0	1.35	-	-
Child is Normal Weight	-	-	70.0	4.10	-	-
Child is Overweight	-	-	14.6	3.04	-	-
Child is Obese	-	-	12.4	2.84	-	-

Notes: Statistics are weighted to represent all older toddlers (children 24 — 35 months of age) enrolled in MSHS in 2017.

The *n* columns in this table contain unweighted sample sizes to identify the number of children with valid data on each of the constructs.

For notes and limitations applying to the MSHS child assessment data, see [Guidance for Interpreting Tables in Section A. Characteristics of MSHS Children](#).

<sup>1</sup>*SE* is the standard error, which is a measure of the precision of the estimated population mean or percentage for MSHS children in 2017.

<sup>2</sup>Biologically implausible weight, height, and BMI values were identified based on extrapolating one-half of the distance between 0 and +2 z-scores to both tails of the distribution. These implausible values are likely the result of measurement error. When a child's weight, height, or BMI were identified as biologically implausible, all three values were set to missing. This was the case for 19 children.

<sup>3</sup>According to the Centers for Disease Control and Prevention (CDC), a child is considered to be underweight when his/her BMI score is below the 5<sup>th</sup> percentile for his/her age and gender, normal weight when his/her BMI score is at or above the 5<sup>th</sup> percentile and below the 85<sup>th</sup> percentile for his/her age and gender, overweight when his/her BMI score is at or above the 85<sup>th</sup> percentile and below the 95<sup>th</sup> for his/her age and gender, and obese when his/her BMI score is at or above the 95<sup>th</sup> percentile for his/her age and gender.

Table A.24. MSHS Children's Height and Weight: Direct Assessment, Preschoolers (36 months and older)

Scale	<i>n</i>	Mean	Percentage (%) of Children	<i>SE</i> <sup>1</sup>	Observed Range (Min — Max)	Possible Range of Scores
Height: Percentile Rank	336	54.9	-	2.81	0.1 — 100	0 — 100
Weight: Percentile Rank	336	61.9	-	2.93	0.6 — 100	0 — 100
Body Mass Index (BMI): Percentile Rank	336	64.7	-	2.22	0.0 — 100	0 — 100
BMI Categories <sup>3</sup>	336					
Child is Underweight	-	-	2.1	0.61	-	-
Child is Normal Weight	-	-	65.5	3.78	-	-
Child is Overweight	-	-	15.0	2.30	-	-
Child is Obese	-	-	17.4	2.74	-	-

Notes: Statistics are weighted to represent all preschoolers (children 36 months of age and older) enrolled in MSHS in 2017.

The *n* columns in this table contain unweighted sample sizes to identify the number of children with valid data on each of the constructs.

For notes and limitations applying to the MSHS child assessment data, see [Guidance for Interpreting Tables in Section A. Characteristics of MSHS Children](#).

<sup>1</sup>*SE* is the standard error, which is a measure of the precision of the estimated population mean or percentage for MSHS children in 2017.

<sup>2</sup>Biologically implausible weight, height, and BMI values were identified based on extrapolating one-half of the distance between 0 and +2 z-scores to both tails of the distribution. These implausible values are likely the result of measurement error. When a child's weight, height, or BMI were identified as biologically implausible, all three values were set to missing. This was the case for 19 children.

<sup>3</sup>According to the Centers for Disease Control and Prevention (CDC), a child is considered to be underweight when his/her BMI score is below the 5<sup>th</sup> percentile for his/her age and gender, normal weight when his/her BMI score is at or above the 5<sup>th</sup> percentile and below the 85<sup>th</sup> percentile for his/her age and gender, overweight when his/her BMI score is at or above the 85<sup>th</sup> percentile and below the 95<sup>th</sup> for his/her age and gender, and obese when his/her BMI score is at or above the 95<sup>th</sup> percentile for his/her age and gender.

Table A.25. MSHS Children's Delays and Disabilities: Questionnaire Developed for MSHS Study, Teacher Report, All Children

Items	<i>n</i>	Percentage (%) of Children	SE <sup>1</sup>
Has this child ever been referred for <i>screening</i> for a development delay or disability?	738		
Yes		13.3	1.80
No		82.0	2.07
I don't know		4.7	1.32
Has this child ever been diagnosed with a development delay or disability?	725		
Yes		10.0	1.46
No		84.3	2.03
I don't know		5.7	1.14
(If diagnosed) What developmental delay or disability was the child diagnosed with? [Select all that apply]	96		
Language		89.3	3.27
Motor		17.6	3.41
Health		0.0	0.00
Socioemotional		7.5	2.90

I don't know		0.9	0.65

Source: Child Delays and Disabilities: Teacher Report, developed for the MSHS Study

Notes: Statistics are weighted to represent all children enrolled in MSHS in 2017.

The *n* columns in this table contain unweighted sample sizes to identify the number of children with valid data on the response category.

The sum of response categories across questions may not be consistent because of missing data at the item level.

The survey included several "gateway" questions that instructed respondents to skip over one or more subsequent questions ("follow-up questions"). Because this was a paper-and-pencil survey, skip patterns could not be enforced. When respondents answered a follow-up question that they should have skipped, their response to the follow-up question was set to missing. However, when respondents did not answer the gateway question, their response to the follow-up question was left intact. Consequently, the number of responses to follow-up questions may sometimes be larger than expected based on the number of responses to gateway questions.

For notes and limitations applying to the MSHS child assessment data, see [Guidance for Interpreting Tables in Section A. Characteristics of MSHS Children](#).

<sup>1</sup>SE is the standard error, which is a measure of the precision of the estimated population percentage for MSHS children in 2017.

**SECTION B. MSHS CLASSROOM QUALITY**

## ***GUIDANCE FOR INTERPRETING TABLES IN SECTION B. MSHS CLASSROOM QUALITY***

### **Organization of Observation Measures and Data Tables**

The study team used three classroom observation measures for this study:

- (1) The Pre-K Classroom Assessment Scoring System® (CLASS),
- (2) The Early Language and Literacy Classroom Observation—Dual Language Learners (ELLCO-DLL), and
- (3) The MSHS Cultural Items and Language Use Checklist (CILU).

Data tables for classroom observations are organized by instrument. As seen in Exhibit 9, sometimes observation measures were only appropriate to be administered with classrooms serving particular age groups. Specifically, the CLASS and ELLCO-DLL are reported only for classrooms in which the majority of children were preschoolers (36 months or older) since these instruments were used only in those classrooms. The CILU was administered in all classrooms. We report the results in separate tables for each age group, beginning with preschool classrooms (in which the majority of children were 36 months and older), then older toddler classrooms (in which the majority of children were 24-35 months) and finally the infant and young toddler classrooms (in which the majority of children were from 0-23 months). We do not present information for the combined, full sample given that instructional practices for younger children are often different than those used in older-age classrooms.

Exhibit 9. Summary of Classroom Observation Measures, by Age Group Served in the Classroom

Classroom Observation Measure	Infant and Young Toddler Classroom (0 — 23 Months)	Older Toddler Classroom (24 — 35 Months)	Preschool Classroom (36 Months and Older)
Pre-K Classroom Assessment Scoring System® (CLASS)	N/A	N/A	Observation used for this age group
Early Language and Literacy Classroom Observation—Dual Language Learners (ELLCO-DLL)	N/A	N/A	Observation used for this age group
MSHS Cultural Items and Language Use Checklist (CILU)	Observation used for this age group	Observation used for this age group	Observation used for this age group

---

## Summary of Measures

The following measures were used to observe classrooms. For more detailed information about each measure, please see the [Classroom Measures](#) section of the Measures chapter. For additional guidance that applies to interpreting all tables, see the [Guidance for Interpreting All Data Tables](#) section.

- **Classroom Assessment Scoring System® (CLASS®), Pre-K:** The CLASS Pre-K is a measure of global quality. It covers 10 dimensions that form three domains: (1) Emotional Support (including Positive Climate, Negative Climate, Teacher Sensitivity, Regard for Student Perspectives); (2) Classroom Organization (including Behavior Management, Productivity, Instructional Learning Formats); and (3) Instructional Supports (including Concept Development, Quality of Feedback, Language Modeling).
- **Early Language and Literacy Classroom Observation—Dual Language Learners (ELLCO-DLL):** The ELLCO-DLL assesses specific practices for dual-language learners. It includes three subscales—a general classroom observation overall scale (Classroom Observation Scale); a checklist rating of the literacy environment (Literacy Environment Checklist); and a five-point rating scale of literacy activities observed (Literacy Activities Rating Scale).
- **MSHS Cultural Items and Language Use (CILU) Checklist:** This observation was developed by the study team to capture the presence, number, and use of items in the classroom representing the cultures of MSHS children and families (e.g., books, musical instruments, foods; books, signs, and labels in Spanish and other languages). It also captured whether shared reading or singing occurred during the observation; the language of the books, reading, and singing; and the grouping (whole group, small group, individual) in which the activities occurred. Finally, the CILU also captures which languages staff used for instructional and non-instructional purposes, by student grouping.

## Considerations for Interpreting Data Tables for Classroom Observations

- Tables include sample sizes and standard errors to provide information about the precision of estimates. Readers should be aware that when estimates for classroom observations are provided for a particular subgroup of classrooms (e.g., only for preschool classrooms) this may result in large standard errors, and therefore the estimates lack precision. These estimates should be interpreted with caution.

- We computed Cronbach’s alpha—a measure of reliability, or internal consistency—for classroom observation measures where possible, that is, where items were combined to create a total continuous score.<sup>23</sup> We include information on reliability—the sample size used for the reliability calculation, the number of items, and Cronbach’s alpha—in the first table that is presented for each instrument. The titles of the tables indicate that reliability information is included in the table and the notes below the table explain the type of reliability information that is included and its location in the table (e.g., row, column and heading label). For ease of locating reliability information, in the [Classroom Measures](#) section, we provide hyperlinks to specific tables that include reliability estimates.
- The CILU observation tool, developed by the study team, is available online and may be helpful for readers to have on hand when reviewing the tables.

---

<sup>23</sup> Sample sizes for the Ages and Stages Questionnaire-3 assessment at each age level were too small to allow calculation of reliability.

---

***DATA TABLES FOR SECTION B. MSHS CLASSROOM QUALITY***

This section presents data tables for all classroom observation measures used in the study. Readers are encouraged to pay careful attention to the following information when reviewing information in this section:

- Notes and limitations applying to the MSHS classroom observation data, which can be found in the section on [Guidance for Interpreting Tables in Section B. MSHS Classroom Quality](#).
- Information about each classroom observation measure that can be found in the [Classroom Measures](#) section of the [Measures](#) chapter.
- Footnotes provided below each table.

The constructs covered in this section include:

- **Global Quality** – as measured by the Classroom Assessment Scoring System® (CLASS) ([Table B.1 – B.3](#))
- **Support for Bilingual and Biliteracy Language Development** – as measured by the Early Language and Literacy Classroom Observation—Dual Language Learners (ELLCO-DLL) ([Table B.4 – B.9](#))
- **Children’s Cultural and Language Environment** – as measured by the Cultural Items and Language Use Checklist (CILU) ([Table B.10 – B.42](#))

Table B.1. MSHS Classrooms: Global Quality, Classroom Observation Scoring System (CLASS), Reliability Scores (Overall), Classroom Observation, Preschool Classrooms (36 months and older)

Scale	<i>n</i>	Number of Items <sup>1</sup>	Cronbach's Alpha
CLASS Instructional Support Domain	41	3	0.93
CLASS Emotional Support Domain	41	4	0.92
CLASS Classroom Organization Domain	41	3	0.85

Source: Classroom Observation Scoring System (CLASS)

Notes: This table presents the reliability of scores for the three CLASS domains. Reliability for each CLASS domain score is based on the multiple dimension scores that contribute to that domain score. The table includes the sample size (*n*), the number of items that comprise the scale, and the Cronbach's alpha, which is a measure of reliability, or internal consistency.

The *n* column in this table includes unweighted sample sizes to identify the number of classrooms with valid data on each of the constructs.

The classroom observation period was from 2.5 — 3 hours for preschool classrooms.

For notes and limitations applying to the MSHS classroom observation data, see [Guidance for Interpreting Tables in Section B. MSHS Classroom Quality](#).

<sup>1</sup>CLASS domain scores are calculated as the mean of the constituent dimension scores. The Instructional Support Domain has three dimensions: Concept Development, Quality of Feedback, and Language Modeling. The Emotional Support Domain has four dimensions: Positive Climate, Negative Climate, Teacher Sensitivity, and Regard for Student Perspectives. The Classroom Organization Domain has three dimensions: Behavior Management, Productivity, and Instructional Learning Formats.

Table reads: The reliability of the CLASS Instructional Support Domain, which was estimated using a sample of 41 classrooms and based on 3 items, was 0.93.

Table B.2. MSHS Classrooms: Global Quality, Classroom Observation Scoring System (CLASS), Reliability Scores (By Observation Cycle), Classroom Observation, Preschool Classrooms (36 months and older)

Scale	<i>n</i>	3 cycles		4 cycles		5 cycles			
		Number of Items	Cronbach's Alpha	<i>n</i>	Number of Items	Cronbach's Alpha	<i>n</i>	Number of Items	Cronbach's Alpha
<b>CLASS Instructional Support Domain</b>									
Concept Development <sup>1</sup>	41	3	0.78	38	4	0.82	33	5	0.86
Quality of Feedback	41	3	0.53	38	4	0.49	33	5	0.59
Language Modeling	41	3	0.74	38	4	0.74	33	5	0.73
<b>CLASS Emotional Support Domain</b>									
Positive Climate	41	3	0.75	38	4	0.79	33	5	0.82
Negative Climate <sup>2</sup>	41	3	0.79	38	4	0.83	33	5	0.88
Teacher Sensitivity	41	3	0.81	38	4	0.86	33	5	0.90
Regard for Student Perspectives	41	3	0.75	38	4	0.81	33	5	0.83
<b>CLASS Classroom Organization Domain</b>									
Behavior Management	41	3	0.53	38	4	0.66	33	5	0.66
Productivity	41	3	0.75	38	4	0.79	33	5	0.79
Instructional Learning Formats	41	3	0.81	38	4	0.82	33	5	0.86

Source: Classroom Observation Scoring System (CLASS)

Notes: This table presents the reliability of scores for the ten CLASS dimensions. Reliability for each CLASS dimension score is based on 3, 4 or 5 repeated observations cycles of that single dimension. The table includes the sample size (*n*), the number of items that comprise the score, and the Cronbach's alpha, which is a measure of reliability, or internal consistency.

The *n* column in this table includes unweighted sample sizes to identify the number of classrooms with valid data on each of the constructs.

The classroom observation period was from 2.5 — 3 hours for preschool classrooms.

For notes and limitations applying to the MSHS classroom observation data, see [Guidance for Interpreting Tables in Section B. MSHS Classroom Quality](#).

<sup>1</sup>CLASS Dimensions are: Concept Development, Quality of Feedback, Language Modeling, Positive Climate, Negative Climate, Teacher Sensitivity, Regard for Student Perspectives, Behavior Management, Productivity, and Instructional Learning Formats. Dimension scores were collected for up to 5 observation cycles. A classroom had to be observed for at least 3 cycles to receive a mean dimension score.

<sup>2</sup>Negative Climate has been reverse coded so that higher scores indicate higher quality.

Table reads: The reliability of the Concept Development Dimension, when estimated for 3 observation cycles in a sample of 41 classrooms, was 0.78. The reliability of the Concept Development Dimension, when estimated for 4 observation cycles in 38 classrooms, was 0.82. The reliability of the Concept Development Dimension, when estimated for 5 observation cycles in 33 classrooms, was 0.86.

Table B.3. MSHS Classrooms: Global Quality, Classroom Observation Scoring System (CLASS), Classroom Observation, Preschool Classrooms (36 months and older)

Scale	<i>n</i>	Mean	<i>SE</i> <sup>1</sup>	Observed Range ( <i>Min</i> — <i>Max</i> ) <sup>2</sup>	Possible Range of Scores ( <i>Min</i> — <i>Max</i> )
<b>CLASS Instructional Support Domain</b>	41	2.4	0.13	1.4 — 3.9	1.0 — 7.0
Concept Development <sup>3</sup>	41	1.8	0.13	1.0 — 3.2	1.0 — 7.0
Quality of Feedback	41	2.8	0.14	1.6 — 4.5	1.0 — 7.0
Language Modeling	41	2.7	0.17	1.4 — 4.5	1.0 — 7.0
<b>CLASS Emotional Support Domain</b>	41	5.7	0.17	3.1 — 6.7	1.0 — 7.0
Positive Climate	41	5.8	0.19	3.0 — 7.0	1.0 — 7.0
Negative Climate <sup>4</sup>	41	6.6	0.14	4.4 — 7.0	1.0 — 7.0
Teacher Sensitivity	41	5.1	0.21	2.4 — 6.8	1.0 — 7.0
Regard for Student Perspectives	41	5.3	0.21	2.6 — 6.8	1.0 — 7.0
<b>CLASS Classroom Organization Domain</b>	41	4.9	0.22	2.8 — 6.4	1.0 — 7.0
Behavior Management	41	5.0	0.23	2.6 — 6.6	1.0 — 7.0
Productivity	41	5.1	0.26	3.0 — 6.8	1.0 — 7.0
Instructional Learning Formats	41	4.6	0.21	2.4 — 6.0	1.0 — 7.0

Source: Classroom Observation Scoring System (CLASS)

Notes: Statistics are weighted to represent all preschool classrooms (classrooms in which the majority of children were 36 months of age or older) in MSHS in 2017.

The *n* column in this table includes unweighted sample sizes to identify the number of classrooms with valid data on each of the constructs.

The classroom observation period was from 2.5 — 3 hours for preschool classrooms.

For notes and limitations applying to the MSHS classroom observation data, see [Guidance for Interpreting Tables in Section B. MSHS Classroom Quality](#).

<sup>1</sup>*SE* is the standard error, which is a measure of the precision of the estimated population mean for MSHS classrooms in 2017.

<sup>2</sup>Observed range of scores refers to the range of classroom mean scores across cycles.

<sup>3</sup>CLASS Dimensions are: Concept Development, Quality of Feedback, Language Modeling, Positive Climate, Negative Climate, Teacher Sensitivity, Regard for Student Perspectives, Behavior Management, Productivity, and Instructional Learning Formats. Dimension scores were collected for up to 5 observation cycles. A classroom had to be observed for at least 2 cycles to receive a mean dimension score. Domain scores for a classroom are calculated as the mean of the constituent dimension scores.

<sup>4</sup>Negative Climate has been reverse coded so that higher scores indicate higher quality.

Table reads: The average score for the CLASS Instructional Support domain in MSHS preschool classrooms (classrooms in which the majority of children were 36 months of age or older) was 2.4. The standard error was 0.13. The observed range of scores was 1.4 — 3.9. The possible range of scores was 1.0 — 7.0.

**Table B.4. MSHS Classrooms: Support for Bilingual Language Development and Biliteracy, Early Language and Literacy Classroom Observation – Dual Language Learners (ELLCO-DLL), Reliability and Summary Scores, Classroom Observation, Preschool Classrooms (36 months and older)**

Scales and Total Score	<i>n</i>	Number of Items	Cronbach's Alpha	Mean	<i>SE</i> <sup>1</sup>	Observed Range (Min – Max)	Possible Range of Scores (Min – Max)
Literacy Environment Checklist <sup>2</sup>	38	10	0.63	7.3	0.75	2 – 13	0 – 16
Classroom Observation Scale <sup>3</sup>	38	8	0.45	22.6	0.86	13 – 29	12 – 31
General Classroom Environment Checklist <sup>4</sup>	40	2	-0.38 <sup>5</sup>	5.8	0.24	3 – 8	2 – 10
Language, Literacy, and Curriculum <sup>6</sup>	38	6	0.43	16.7	0.79	9 – 23	6 – 30
Literacy Activities Rating Scale <sup>6</sup>	40	8	0.64	1.8	0.33	0 – 10	0 – 14
Total Score <sup>7</sup>	35	26	0.59	31.5	1.61	16 – 47	8 – 70

Source: Early Language and Literacy Classroom Observation – Dual Language Learners (ELLCO-DLL)

Notes: This table presents both the reliability of scores and summary statistics for this instrument. Reliability information is presented in the second through fourth columns of the table and includes the sample size (*n*), number of items included in the reliability estimate, and the Cronbach's alpha, which is a measure of reliability, or internal consistency. Summary statistics are presented in the remaining columns.

Statistics are weighted to represent all preschool classrooms (classrooms in which the majority of children were 36 months of age or older) in MSHS in 2017.

The *n* column in this table includes unweighted sample sizes to identify the number of classrooms with valid data on each of the constructs.

The classroom observation period was from 2.5 – 3 hours for preschool classrooms.

For notes and limitations applying to the MSHS classroom observation data, see [Guidance for Interpreting Tables in Section B. MSHS Classroom Quality](#).

<sup>1</sup>*SE* is the standard error, which is a measure of the precision of the estimated population mean for MSHS classrooms in 2017.

<sup>2</sup>The Literacy Environment Checklist sums ten scores from four subscales: Book Selection, Book Use, Writing Materials, and Writing Around the Room.

<sup>3</sup>The Classroom Observation Scale sums scores from the General Classroom Environment Checklist and the Language, Literacy and Curriculum subscale.

<sup>4</sup>The General Classroom Environment Checklist sums scores from two items: Presence and Use of Technology, and Classroom Management Strategies. The Cronbach's alpha for the General Classroom Environment Checklist is negative because the two items that comprise the checklist (Presence and Use of Technology and Classroom Management Strategies) are negatively correlated ( $r = -0.17$ ).

<sup>5</sup>The Language, Literacy, and Curriculum subscale sums scores from the following items: Presence of Books, Approaches to Book Reading, Approaches to Children's Writing, Approaches to Curriculum Integration, Facilitating Home Support for Language and Literacy, and Approaches to Assessment.

<sup>6</sup>The Literacy Activities Rating Scale is the sum of eight items related to book reading.

<sup>7</sup>The Total Score is the sum of scores for the: Literacy Environment Checklist; the General Classroom Environment Checklist; the Language, Literacy and Curriculum subscale; and Literacy Activities Rating Scale.

Table reads: The reliability of the Literacy Environment Checklist, which was estimated based on 10 items using a sample of 38 classrooms, was 0.63. The average score for the ELLCO-DLL Literacy Environment Checklist in MSHS preschool classrooms (classrooms in which the majority of children were 36 months of age or older) was 7.3. The standard error was 0.75 points. The observed range of scores was 2 – 13. The possible range of scores was 0 – 16.

Table B.5. MSHS Classrooms: Support for Bilingual Language Development and Biliteracy, Literacy Environment Checklist, Early Language and Literacy Classroom Observation – Dual Language Learners (ELLCO-DLL), Classroom Observation, Preschool Classrooms (36 months and older)

Notes: Statistics are weighted to represent all preschool classrooms (classrooms in which the majority of children were 36 months of age or older) in MSHS in 2017.

The  $n$  column in this table includes unweighted sample sizes to identify the number of classrooms with valid data on each of the questions.

The classroom observation period was from 2.5 — 3 hours for preschool classrooms.

For notes and limitations applying to the MSHS classroom observation data, see [Guidance for Interpreting Tables in Section B. MSHS Classroom Quality](#).

<sup>1</sup>The sum of response categories across questions may not be consistent due to item-level missingness.

<sup>2</sup> $SE$  is the standard error, which is a measure of the precision of the estimated population percentage for MSHS classrooms in 2017.

<sup>3</sup>The ELLCO-DLL defines “bilingual” as Spanish/English.

Table reads: In 28.2% of MSHS preschool classrooms (classrooms in which the majority of children were 36 months of age or older), Spanish and/or bilingual books in the classroom did not represent a range of difficulty levels. In 71.8% of MSHS preschool classrooms, Spanish and/or bilingual books did represent a range of difficulty levels. The standard error for both estimates was 9.17 percentage points.

**Table B.6. MSHS Classrooms: Support for Bilingual Language Development and Biliteracy, General Classroom Environment Checklist, Early Language and Literacy Classroom Observation – Dual Language Learners (ELLCO-DLL), Classroom Observation, Preschool Classrooms (36 months and older)**

Item	<i>n</i>	Mean	<i>SE</i> <sup>1</sup>	Observed Range ( <i>Min</i> – <i>Max</i> )	Possible Range of Scores ( <i>Min</i> – <i>Max</i> )
Presence and Use of Technology <sup>2</sup>	40	1.5	0.14	1 – 4	1 – 5
Classroom Management Strategies <sup>3</sup>	40	4.2	0.16	2 – 5	1 – 5

Notes: Statistics are weighted to represent all preschool classrooms (classrooms in which the majority of children were 36 months of age or older) in MSHS in 2017.

The *n* column in this table includes unweighted sample sizes to identify the number of classrooms with valid data on each of the constructs.

The classroom observation period was from 2.5 – 3 hours for preschool classrooms.

For notes and limitations applying to the MSHS classroom observation data, see [Guidance for Interpreting Tables in Section B. MSHS Classroom Quality](#).

<sup>1</sup>*SE* is the standard error, which is a measure of the precision of the estimated population mean for MSHS classrooms in 2017.

<sup>2</sup>Presence and Use of Technology rates the extent to which Technology (such as audiotape recorders /players, cameras, overhead projectors, and computers) was present and used regularly by children in the classroom.

<sup>3</sup>Classroom Management Strategies assesses the cultural and linguistic appropriateness of teachers' educational practices, for example, whether they incorporate children's first language for dual language learners.

Table reads: The average score for the Presence and Use of Technology in MSHS preschool classrooms (classrooms in which the majority of children were 36 months of age or older) was 1.5. The standard error was 0.14. The observed range of scores was 1 – 4. The possible range of scores was 1 – 5.

**Table B.7. MSHS Classrooms: Support for Bilingual Language Development and Biliteracy, Language, Literacy, and Curriculum Subscale, Early Language and Literacy Classroom Observation – Dual Language Learners (ELLCO-DLL), Classroom Observation, Preschool Classrooms (36 months and older)**

The  $n$  column in this table includes unweighted sample sizes to identify the number of classrooms with valid data on each of the constructs.

The classroom observation period was from 2.5 — 3 hours for preschool classrooms.

For notes and limitations applying to the MSHS classroom observation data, see [Guidance for Interpreting Tables in Section B. MSHS Classroom Quality](#).

<sup>1</sup>The sum of response categories across questions may not be consistent due to item-level missingness.

<sup>2</sup> $SE$  is the standard error, which is a measure of the precision of the estimated population percentage for MSHS classrooms in 2017.

<sup>3</sup>The ELLCO-DLL defines “bilingual” as Spanish/English.

<sup>4</sup>This question was answered only for the 16 MSHS classrooms in which an adult engaged in 1-to-1 book reading or small group book reading with Spanish/English dual language learners during the observation period.

Table reads: In 67.1% of MSHS preschool classrooms (classrooms in which the majority of children were 36 months of age or older), fewer than 5 minutes were spent reading in Spanish to the full group (standard error = 10.29 percentage points). In 29.6% of MSHS preschool classrooms, 5 to 10 minutes were spent reading in Spanish to the full group (standard error = 10.07 percentage points). In 3.3% of MSHS preschool classrooms, more than 10 minutes was spent reading in Spanish to the full group (standard error = 2.25 percentage points).

Table B.10. MSHS Classrooms: Cultural and Language Environment, Percentage of Classrooms in Which Books Were Read During the Observation Period, by Language of Book and Language in Which Book Was Read, Cultural Items and Language Use (CILU) Checklist, Classroom Observation, Infant/Young Toddler Classrooms (0 to 23 months)

Language of Book <sup>1</sup>	Language in Which Book Was Read	<i>n</i>	Percentage (%) of Classrooms <sup>2</sup>	SE <sup>3</sup>

Source: MSHS Cultural Items and Language Use Checklist (CILU)

Notes: Statistics are weighted to represent all infant/young Toddler classrooms (classrooms in which the majority of children were 0 — 23 months) in MSHS in 2017.

The *n* column in this table includes unweighted sample sizes to identify the number of classrooms with valid data on each of the constructs.

The observation period was a total of 2 hours for infant/young toddler classrooms.

For notes and limitations applying to the MSHS classroom observation data, see [Guidance for Interpreting Tables in Section B. MSHS Classroom Quality](#).

<sup>1</sup>When observers saw staff reading wordless picture books to children, particularly in infant classrooms, observers judged the language the book was “written in” by the language of the title.

<sup>2</sup>Because teachers in MSHS classrooms could be observed reading books in multiple languages, percentages can sum to greater than 100%.

<sup>3</sup>SE is the standard error, which is a measure of the precision of the estimated population percentage for MSHS classrooms in 2017.

<sup>4</sup>“Not observed” refers to instances in which no items within this section of the instrument were completed. If individual items were not completed, they were treated as missing and excluded from the table.

<sup>5</sup>The MSHS CILU defines “bilingual” as Spanish/English.

<sup>6</sup>“Other language” refers to any language other than English, Spanish, or Spanish/English bilingual.

Table reads: In 24.3% of MSHS infant/young toddler classrooms (classrooms in which the majority of children were 0 — 23 months), books written in Spanish were read in Spanish during the observation period (standard error = 7.42 percentage points). In 0.0% of MSHS infant/young toddler classrooms, books written in Spanish were read in English during the observation period (standard error = 0.00 percentage points). In 4.7% of MSHS infant/young toddler classrooms, books written in Spanish were read in both Spanish and English during the observation period (standard error = 3.63 percentage points). In 0.0% of MSHS infant/young toddler classrooms, books written in Spanish were read in a language other than English or Spanish during the observation period (standard error = 0.00). In 72.3% of MSHS infant/young toddler classrooms, no books written in Spanish were read aloud during the observation period (standard error = 7.70 percentage points).

Table B.11. MSHS Classrooms: Cultural and Language Environment, Average Number of Books Read per Classroom During the Observation Period, by Language of Book, Cultural Items and Language Use (CILU) Checklist, Classroom Observation, Infant/Young Toddler Classrooms (0 to 23 months)

Language of Book <sup>1</sup>	<i>n</i>	Mean	<i>SE</i> <sup>2</sup>	Observed Range ( <i>Min</i> — <i>Max</i> )
Spanish	14	2.98	0.84	1 — 8
English	23	2.25	0.23	1 — 5
Bilingual <sup>3</sup>	6	1.36	0.26	1 — 2
Other language <sup>4</sup>	2	1.00	0.00	1 — 1

Source: MSHS Cultural Items and Language Use Checklist (CILU)

Source: MSHS Cultural Items and Language Use Checklist (CILU)

Notes: Statistics are weighted to represent all infant/young toddler classrooms (classrooms in which the majority of children were 0 – 23 months) in MSHS in 2017.

The *n* columns in this table include unweighted sample sizes to identify the number of classrooms with valid data on each of the constructs.

The observation period was a total of 2 hours for infant/young toddler classrooms.

For notes and limitations applying to the MSHS classroom observation data, see [Guidance for Interpreting Tables in Section B. MSHS Classroom Quality](#).

<sup>1</sup>*SE* is the standard error, which is a measure of the precision of the estimated population percentage for MSHS classrooms in 2017.

<sup>2</sup>Some examples of cultural books include books about farmworkers, agriculture, Hispanics, other countries, or immigrant communities.

<sup>3</sup>The MSHS CILU defines "bilingual" as Spanish/English.

Table reads: In 14.0% of MSHS infant/young toddler classrooms, many cultural books were present and accessible during the observation period (standard error = 10.85 percentage points). In 42.5% of MSHS infant/young toddler classrooms (classrooms in which the majority of children were 0 – 23 months), few cultural books were present and accessible during the observation period (standard error = 9.08 percentage points). In 43.5% of MSHS infant/young toddler classrooms, no cultural books were present and accessible during the observation period (standard error = 10.25 percentage points).

Table B.17. MSHS Classrooms: Cultural and Language Environment, Percentage of Classrooms in Which Cultural Items Were Used During the Observation Period, Cultural Items and Language Use (CILU) Checklist, Classroom Observation, Infant/Young Toddler Classrooms (0 to 23 months)

Cultural Items	<i>n</i>	%	<i>SE</i> <sup>1</sup>
Cultural books <sup>2</sup> (in any language)	12	31.8	11.47
Multilingual Books <sup>3</sup>	36	76.3	11.15
No books present/accessible in classroom	0	0.0	0.00

Source: MSHS Cultural Items and Language Use Checklist (CILU)

Notes: Statistics are weighted to represent all older toddler classrooms (classrooms in which the majority of children were 24 — 35 months) in MSHS in 2017.

The *n* column in this table includes unweighted sample sizes to identify the number of classrooms with valid data on each of the constructs.

The observation period was a total of 2 hours for older toddler classrooms.

For notes and limitations applying to the MSHS classroom observation data, see [Guidance for Interpreting Tables in Section B. MSHS Classroom Quality](#).

<sup>1</sup>When observers saw staff reading wordless picture books to children, particularly in infant classrooms, observers judged the language the book was “written in” by the language of the title.

<sup>2</sup>Because teachers in MSHS classrooms could be observed reading books in multiple languages, percentages can sum to greater than 100%.

<sup>3</sup>*SE* is the standard error, which is a measure of the precision of the estimated population percentage for MSHS classrooms in 2017.

<sup>4</sup>“Not observed” refers to instances in which no items within this section of the instrument were completed. If individual items were not completed, they were treated as missing and excluded from the table.

<sup>5</sup>The MSHS CILU defines “bilingual” as Spanish/English.

<sup>6</sup>“Other language” refers to any language other than English, Spanish, or Spanish/English bilingual.

Table reads: In 19.3% of MSHS older toddler classrooms (classrooms in which the majority of children were 24 — 35 months), books written in Spanish were read in Spanish during the observation period (standard error = 5.76 percentage points). In 0.0% of MSHS older toddler classrooms, books written in Spanish were read in English during the observation period (standard error = 0.0 percentage points). In 0.0% of MSHS older toddler classrooms, books written in Spanish were read in both Spanish and English during the observation period (standard error = 0.0 percentage points). In 0.0% of MSHS older toddler classrooms, books written in Spanish were read in a language other than English or Spanish during the observation period (standard error = 0.00). In 80.7% of MSHS older toddler classrooms, no books written in Spanish were read aloud during the observation period (standard error = 5.76 percentage points).

Table B.22. MSHS Classrooms: Cultural and Language Environment, Average Number of Books Read per Classroom During the Observation Period, by Language of Book, Cultural Items and Language Use (CILU) Checklist, Classroom Observation, Older Toddler Classrooms (24 to 35 months)

Language of Book <sup>1</sup>	<i>n</i>	Mean	<i>SE</i> <sup>2</sup>	Observed Range ( <i>Min — Max</i> )
Spanish	13	0.69	0.23	0 — 3
English	22	1.70	0.51	0 — 6
Bilingual <sup>3</sup>	10	0.72	0.34	0 — 4
Other language <sup>4</sup>	-	-	-	-

Source: MSHS Cultural Items and Language Use Checklist (CILU)

Notes: Statistics are weighted to represent all older toddler classrooms (classrooms in which the majority of children were 24 — 35 months) in MSHS in 2017.

The *n* column in this table includes unweighted sample sizes to identify the number of classrooms with valid data on each of the constructs.

The observation period was a total of 2 hours for older toddler classrooms.

For notes and limitations applying to the MSHS classroom observation data, see [Guidance for Interpreting Tables in Section B. MSHS Classroom Quality](#).

<sup>1</sup>When observers saw staff reading wordless picture books to children, particularly in infant classrooms, observers judged the language the book was “written in” by the language of the title.

<sup>2</sup>*SE* is the standard error, which is a measure of the precision of the estimated population mean for MSHS classrooms in 2017.

<sup>3</sup>The MSHS CILU defines “bilingual” as Spanish/English.

<sup>4</sup>“Other language” refers to any language other than English, Spanish, or Spanish/English bilingual.

Table reads: On average, staff in MSHS older toddler classrooms read 0.69 books written in Spanish during the observation period. The standard error was 0.23 books. The number of Spanish books read by staff in MSHS older toddler classrooms during the observation period ranged from a minimum of 0 to a maximum of 3.

**Table B.23. MSHS Classrooms: Cultural and Language Environment, Percentage of Classrooms in Which Books Were Read During the Observation Period, by Language of Book and Grouping, Cultural Items and Language Use (CILU) Checklist, Classroom Observation, Older Toddler Classrooms (24 to 35 months)**

Language of Book <sup>1</sup>	Grouping	<i>n</i>	Percentage (%) of Classrooms <sup>2</sup>	<i>SE</i> <sup>3</sup>
Spanish	Whole group	8	19.2	4.90
	Small group	4	8.4	4.45
	1-on-1	2	3.3	2.35
	Not Observed <sup>4</sup>	29	77.6	5.43

The observation period was a total of 2 hours for older toddler classrooms.

For notes and limitations applying to the MSHS classroom observation data, see [Guidance for Interpreting Tables in Section B. MSHS Classroom Quality](#).

<sup>1</sup>Because teachers in MSHS classrooms could be observed singing in multiple languages, percentages can sum to greater than 100%.

<sup>2</sup>*SE* is the standard error, which is a measure of the precision of the estimated population percentage for MSHS classrooms in 2017.

<sup>3</sup>The MSHS CILU defines “bilingual” as Spanish/English.

<sup>4</sup>“Other language” refers to any language other than English, Spanish, or Spanish/English bilingual.

<sup>5</sup>“Not observed” refers to instances in which no items within this section of the instrument were completed. If individual items were not completed, they were treated as missing and excluded from the table.

Table reads: In 82.4% of MSHS older toddler classrooms (classrooms in which the majority of children were 24 — 35 months), songs were sung in Spanish during the observation period. The standard error was 7.93 percentage points.

Table B.25. MSHS Classrooms: Cultural and Language Environment, Average Number of Songs Sung per Classroom During the Observation Period, Cultural Items and Language Use (CILU) Checklist, Classroom Observation, Older Toddler Classrooms (24 to 35 months)

Item	<i>n</i>	Mean	<i>SE</i> <sup>1</sup>	Observed Range ( <i>Min — Max</i> )
Number of Songs	37	7.6	1.08	1 — 21

Source: MSHS Cultural Items and Language Use Checklist (CILU)

Notes: Statistics are weighted to represent all older toddler classrooms (classrooms in which the majority of children were 24 — 35 months) in MSHS in 2017.

The *n* column in this table includes unweighted sample sizes to identify the number of classrooms with valid data on each of the constructs.

The observation period was a total of 2 hours for older toddler classrooms.

For notes and limitations applying to the MSHS classroom observation data, see [Guidance for Interpreting Tables in Section B. MSHS Classroom Quality](#).

<sup>1</sup>*SE* is the standard error, which is a measure of the precision of the estimated population mean for MSHS classrooms in 2017.

Table reads: On average, 7.6 songs were sung per MSHS older toddler classroom (classrooms in which the majority of children were 24 — 35 months) during the observation period. The standard error was 1.08 songs. The number of songs sung ranged from a minimum of 1 to a maximum of 21.

**Table B.26. MSHS Classrooms: Cultural and Language Environment, Percentage of Classrooms in Which Songs Were Sung During the Observation Period, by Grouping, Cultural Items and Language Use (CILU) Checklist, Classroom Observation, Older Toddler Classrooms (24 to 35 months)**

Grouping	<i>n</i>	Percentage (%) of Classrooms <sup>1</sup>	<i>SE</i> <sup>2</sup>
Whole group	33	89.7	4.65
Small group	21	52.3	10.87
1-on-1	14	35.9	11.14
Not Observed <sup>3</sup>	0	0.0	0.00

Source: MSHS Cultural Items and Language Use Checklist (CILU)

Notes: Statistics are weighted to represent all preschool classrooms (classrooms in which the majority of children were 36 months or older) in MSHS in 2017.

The *n* column in this table includes unweighted sample sizes to identify the number of classrooms with valid data on each of the constructs.

The observation period was a total of 2.5 — 3 hours for preschool classrooms.

For notes and limitations applying to the MSHS classroom observation data, see [Guidance for Interpreting Tables in Section B. MSHS Classroom Quality](#).

<sup>1</sup>When observers saw staff reading wordless picture books to children, particularly in infant classrooms, observers judged the language the book was “written in” by the language of the title.

<sup>2</sup>Because teachers in MSHS classrooms could be observed reading books in multiple languages, percentages can sum to greater than 100%.

<sup>3</sup>*SE* is the standard error, which is a measure of the precision of the estimated population percentage for MSHS classrooms in 2017.

<sup>4</sup>“Not observed” refers to instances in which no items within this section of the instrument were completed. If individual items were not completed, they were treated as missing and excluded from the table.

<sup>5</sup>The MSHS CILU defines “bilingual” as Spanish/English.

<sup>6</sup>“Other language” refers to any language other than English, Spanish, or Spanish/English bilingual.

Table reads: In 23.6% of MSHS preschools classrooms (classrooms in which the majority of children were 36 months or older), books written in Spanish were read in Spanish during the observation period (standard error = 6.52 percentage points). In 4.4% of MSHS preschool classrooms, books written in Spanish were read in English during the observation period (standard error = 3.47 percentage points). In 2.3% of MSHS preschool classrooms, books written in Spanish were read in both Spanish and English during the observation period (standard error = 1.88 percentage points). In 0.0% of MSHS preschool classrooms, books written in Spanish were read in a language other than English or Spanish during the observation period (standard error = 0.00). In 72.9% of MSHS preschool classrooms, no books written in Spanish were read aloud during the observation period (standard error = 6.88 percentage points).

Table B.33. MSHS Classrooms: Cultural and Language Environment, Average Number of Books Read per Classroom During the Observation Period, by Language of Book, Cultural Items and Language Use (CILU) Checklist, Classroom Observation, Preschool Classrooms (36 months and older)

Language of Book <sup>1</sup>	<i>n</i>	Mean	<i>SE</i> <sup>2</sup>	Observed Range ( <i>Min — Max</i> )

<sup>1</sup>When observers saw staff reading wordless picture books to children, particularly in infant classrooms, observers judged the language the book was “written in” by the language of the title.

<sup>2</sup>*SE* is the standard error, which is a measure of the precision of the estimated population mean for MSHS classrooms in 2017.

<sup>3</sup>The MSHS CILU defines “bilingual” as Spanish/English.

<sup>4</sup>“Other language” refers to any language other than English, Spanish, or Spanish/English bilingual.

Table reads: On average, staff in MSHS preschool classrooms read 1.76 books written in Spanish during the observation period. The standard error was 0.30 books. The number of Spanish books read by staff in MSHS preschool classrooms during the observation period ranged from a minimum of 0 to a maximum of 3.

**Table B.34. MSHS Classrooms: Cultural and Language Environment, Percentage of Classrooms in Which Books Were Read During the Observation Period, by Language of Book and Grouping, Cultural Items and Language Use (CILU) Checklist, Classroom Observation, Preschool Classrooms (36 months and older)**

Language of Book <sup>1</sup>	Grouping	<i>n</i>	Percentage (%) of Classrooms <sup>2</sup>	<i>SE</i> <sup>3</sup>
Spanish	Whole group	7	11.0	4.74
	Small group	3	9.6	5.72
	1-on-1	5	7.9	3.99
	Not Observed <sup>4</sup>	27	76.0	7.94
English	Whole group	15	55.1	10.75
	Small group	9	25.0	9.47
	1-on-1	6	17.1	8.08
	Not Observed <sup>4</sup>	17	26.8	7.87
Bilingual <sup>5</sup>	Whole group	4	15.5	8.29
	Small group	3	1.9	1.32
	1-on-1	1	1.0	1.12
	Not Observed <sup>4</sup>	34	82.6	8.38
Other language <sup>6</sup>	Whole group	1	1.6	1.63
	Small group	1	0.9	0.88

	Not Observed <sup>4</sup>	39	97.5	1.86

Source: MSHS Cultural Items and Language Use Checklist (CILU)

Notes: Statistics are weighted to represent all preschool classrooms (classrooms in which the majority of children were 36 months or older) in MSHS in 2017.

The *n* column in this table includes unweighted sample sizes to identify the number of classrooms with valid data on each of the constructs.

The observation period was a total of 2.5 — 3 hours for preschool classrooms.

For notes and limitations applying to the MSHS classroom observation data, see [Guidance for Interpreting Tables in Section B. MSHS Classroom Quality](#).

<sup>1</sup>When observers saw staff reading wordless picture books to children, particularly in infant classrooms, observers judged the language the book was “written in” by the language of the title.

<sup>2</sup>Because teachers in MSHS classrooms could be observed reading books in multiple groupings, percentages can sum to greater than 100%.

<sup>3</sup>*SE* is the standard error, which is a measure of the precision of the estimated population percentage for MSHS classrooms in 2017.

<sup>4</sup>“Not observed” refers to instances in which no items within this section of the instrument were completed. If individual items were not completed, they were treated as missing and excluded from the table.

<sup>5</sup>The MSHS CILU defines “bilingual” as Spanish/English.

<sup>6</sup>“Other language” refers to any language other than English, Spanish, or Spanish/English bilingual.

Table reads: In 11.0% of MSHS preschool classrooms (classrooms in which the majority of children were 36 months or older), books written in Spanish were read in whole groups during the observation period (standard error = 4.74 percentage points). In 9.6% of MSHS preschool classrooms, books written in Spanish were read in small groups during the observation period (standard error = 5.72 percentage points). In 7.9% of MSHS preschool classrooms, books written in Spanish were read 1-on-1 during the observation period (standard error = 3.99 percentage points). In 76.0% of MSHS preschool classrooms, no books written in Spanish were read aloud during the observation period (standard error = 7.94 percentage points).

Table B.35. MSHS Classrooms: Cultural and Language Environment, Percentage of Classrooms Where Songs Were Sung During the Observation Period, by Language of Singing, Cultural Items and Language Use (CILU) Checklist, Classroom Observation, Preschool Classrooms (36 months and older)

Language Used for Singing	<i>n</i>	Percentage (%) of Classrooms <sup>1</sup>	<i>SE</i> <sup>2</sup>
Spanish	26	66.0	9.46
English	31	72.3	9.47
Bilingual <sup>3</sup>	5	7.7	4.48
Other <sup>4</sup>	1	0.9	0.88
Not Observed <sup>5</sup>	3	5.5	3.39

Table reads: In 13.0% of MSHS preschool classrooms (classrooms in which the majority of children were 36 months or older), at least one teacher spoke English completely for instructional purposes with students 1-on-1 (standard error = 4.95 percentage points). In 16.6% of MSHS preschool classrooms, teachers spoke English completely for non-instructional purposes with students 1-on-1 (standard error = 6.43 percentage points).

**SECTIONS C-G: SURVEYS AND PARENT INTERVIEW**

---

***GUIDANCE FOR INTERPRETING TABLES IN SECTIONS C-G: SURVEYS AND PARENT INTERVIEW***

Data tables in Sections C-G present information on MSHS staff and parents. The information is organized by respondent. The sections include:

- [Section C. MSHS Program Directors](#)
- [Section D. MSHS Center Directors](#)
- [Section E. MSHS Teachers](#)
- [Section F. MSHS Assistant Teachers](#)
- [Section G. Characteristics of MSHS Families](#)

When interpreting information in these sections, readers should consider the following:

- For each section, the data are presented in the order that questions appear on the instrument.
- Surveys and protocols were developed by the study team and are available online for readers to have on hand as they review the data tables.
- The statistics provided in the tables throughout this report are estimates of key characteristics of the MSHS population in 2017. Because we collected information on only a sample of centers, classrooms, teachers, assistant teachers, families, and children, we used a statistical procedure called weighting. This procedure adjusts the data so that we can interpret the information as being representative of the MSHS population in 2017. Because we attempted to survey all of the eligible program directors within MSHS, we did not weight the data collected from program directors.
- The  $n$  column in the tables represents unweighted sample sizes to identify the number of respondents with valid data on each of the items.
- $SE$  is the standard error, which is a measure of the precision of the estimated population mean or percentage.
- Square brackets were used to indicate information supplied by the respondent. The information supplied may vary across respondents.
- The response options for survey questions that ask respondents to “mark all that apply” or “mark one or more” can sum to greater than 100 percent.
- Because the surveys were administered using paper and pencil, respondents sometimes skipped questions that they were instructed to answer. For example,

---

this is apparent for questions related to language, where respondents were more likely to answer questions related to Spanish and English, but then stopped responding to questions about less commonly used languages such as Haitian Creole or indigenous languages. Drops in sample sizes are also evident for questions that allowed respondents to select and specify ‘Other’. We present descriptive information about how often respondents selected ‘Other’ but do not further analyze or report on the text they provided to specify ‘Other’. Finally, we noticed a drop in sample sizes for questions that were formatted in a grid layout. This was likely due to confusion about how to complete the questions in this format. We footnote these questions and advise the reader to interpret these estimates with caution. The data tables also provide unweighted sample sizes so that the reader can identify when this occurred.

- Because this was a paper-and-pencil survey, skip patterns could not be enforced. The survey included several “gateway” questions that instructed respondents to skip over one or more subsequent questions (“follow-up questions”). When respondents answered a follow-up question that they should have skipped, we set their response to the follow-up question to missing. However, when respondents did not answer the gateway question, we left their response to the follow-up question intact. Consequently, the number of responses to follow-up questions may sometimes be larger than expected based on the number of responses to gateway questions.
- The study team constructed some of the variables that are presented in the tables. To indicate which questions present constructed variables, the number of the survey question is marked with an asterisk, for example, B16.\*, to indicate that the study team constructed the variable from responses to survey question B16. When the study team used responses from multiple questions to create a constructed variable, the numbers of all survey questions that were used to create the constructed variable are listed before the question text and are followed by an asterisk.
- Prior to publishing the findings, the study team conducted a review of disclosure risk to ensure that all questions with personally identifiable information (e.g., dates of birth) were suppressed from the data tables and the archived datasets. The study team also reviewed the data to identify outliers on continuous variables of a sensitive nature (e.g., number of years parent spent in the United States or home country) and small cell sizes on categorical variables that could be traced back to the individual (e.g., race). To protect respondents’ identity and information in the archived datasets, categorical variables were created from continuous variables of a sensitive nature (e.g., categories for 0-10 years, 11-20 years). For such variables, the mean of the original continuous variable (which will be suppressed in the archived dataset) is presented with the newly

constructed categorical variable side by side in the data tables with a footnote identifying the constructed variable. In addition, during the review of disclosure risk process, the team sometimes combined categories for categorical variables of a sensitive nature that had small cell sizes. When categories were collapsed, the label for the collapsed category lists the original categories so that the reader can identify which of the original survey response options were combined to create the final categories in the data table.

- Four program directors (11 percent) did not complete the survey. These program directors were each located in a different geographic region—East, Midwest, Southeast, and Northwest. The non-responding programs were also smaller in size, with a median of 191 funded enrollments slots and 3.5 centers in non-responding programs compared to a median of 284 funded enrollment slots and 5 centers among all MSHS programs. Due to the small size of the universe and the small number of non-respondents, information about program characteristics could not be used to inform a non-response adjustment. Therefore, estimates should be interpreted with caution.

**SECTION C. DATA TABLES FOR MSHS PROGRAM DIRECTORS**

This section presents data tables for information obtained from the MSHS Program Director Survey. Readers are encouraged to pay careful attention to the following information when reviewing information in this section:

- Notes and limitations applying to the MSHS survey, which can be found in the section on [Guidance for Interpreting Tables in Sections C-G: Surveys and Parent Interview](#).
- Information about the survey can be found in the [MSHS Staff Surveys and Parent Interview](#) section of the [Measures](#) chapter.
- Footnotes provided below each table.

The constructs covered in this section include:

- Program Director Background and Experience ([Table C.1 – C.4](#))
- Training and Support for Program Staff ([Table C.5 – C.6](#))
- Program Enrollment ([Table C.7](#))
- Staffing ([Table C.8](#))
- Use of Data and Information ([Table C.9](#))
- Program Management, Communication, Partnerships, and Expansion ([Table C.10 – C.13](#))
- Instructional and Assessment Practices ([Table C.14 – C.16](#))
- Language of Instruction and Language Policies ([Table C.17](#))
- Transitions ([Table C.18](#))

Table C.1. MSHS Program Directors: Experience (Survey, Section A)

Item	<i>n</i>	Percentage (%) of Program Directors	Mean	Min	Max
<b>A1. In total, how many years (including this year) have you worked in the early childhood field? Please round to the nearest year.</b>	32	-	27.22	11.00	44.00
10 — 19 years		18.8	-	-	-
20 — 25 years		53.1	-	-	-
26 — 30 years		28.1	-	-	-
31 or more years		0.0	-	-	-
<b>A2. In total, how many years (including this year) have you worked with any MSHS, Head Start, or Early Head Start Program? Please round to the nearest year.</b>	32	-	24.47	2.00	44.00
1 — 19 years		31.3	-	-	-
20 — 25 years		18.8	-	-	-
26 — 30 years		31.3	-	-	-
31 or more years		18.8	-	-	-
<b>A3. In total, how many years (including this year) have you worked as a director for this MSHS program? Please round to the nearest year.</b>	32	-	9.00	1.00	28.00
1 — 5 years		43.8	-	-	-
6 — 10 years		28.1	-	-	-
11 or more years		28.1	-	-	-
<b>A4. What experiences have you had with migrant and seasonal families and/or the MSHS program before becoming an MSHS Center Director? (Check all that apply.)</b>	32				
Family members are/were migrant and seasonal farmworkers		25.0	-	-	-
You are/were a migrant or seasonal farmworker		21.9	-	-	-
Teacher		28.1	-	-	-
Assistant Teacher		25.0	-	-	-
Administrator (Assistant Center Director, Assistant Program Director, Center Director, Area Coordinator, Regional Director, Program Director)		53.1	-	-	-
Administrative Support (Secretary, Financial Officer, and Information Technology Director) or Support Staff (Kitchen Staff, Custodial Staff, Bus Driver, Bus Monitor, Transportation Supervisor)		18.8	-	-	-

Table C.1. MSHS Program Directors: Experience (Survey, Section A) (continued)

Item	<i>n</i>	Percentage (%) of Program Directors	Mean	Min	Max
Education, Health, and Social Services (Educational Specialist, Education Manager, Component Coordinator, Outreach Staff/Recruiter, Family Service Worker, Counselor/Mental Health Professional, Social Worker, Health Care Worker, Community Organizer)		46.9	-	-	-
Other		25.0	-	-	-
None of the above		6.3	-	-	-

Note: For notes and limitations applying to the MSHS Program Director survey data, see [Guidance for Interpreting Tables in Sections C-G: Surveys and Parent Interview](#).

Table C.2. MSHS Program Directors: Education and Training (Survey, Section A)

Item	<i>n</i>	Percentage (%) of Program Directors
<b>A5. What is the <i>highest</i> grade or year of school that you completed?</b>	32	
Less than an associate's degree		0.0
Associate's degree or Bachelor's degree		28.1
Some graduate or professional school with or without degree		71.9
<b>A6. (IF A5 IS 'ASSOCIATE'S DEGREE' OR HIGHER) In what field did you obtain your <i>highest</i> degree? (Mark one only.)</b>	31	
Child development, human development or developmental psychology; Early childhood education; or Elementary education		35.5
Special education		0.0
Education administration/management or Business administration/management		35.5
Other Field (including Public health)		29.0
<b>A7. (IF A5 IS 'SOME COLLEGE WITHOUT A DEGREE' OR HIGHER) Have you completed any college/university courses on bilingual/Dual Language Learner (DLL) children? (Mark one only.)</b>	31	
Yes, a whole course was dedicated to bilingual/DLL children		3.2
Yes, a large part of a course was dedicated to bilingual/DLL children		3.2
Yes, one or two classes of a course was dedicated to bilingual/DLL children		16.1
No		77.4
<b>A8a. Childhood Development Associate (CDA) credential</b>	27	
Already have or In the process of obtaining		11.1
Do not have/Not in the process of obtaining		88.9
<b>A8b. Another certification in early childhood development</b>	26	
Already have or In the process of obtaining		23.1
Do not have/Not in the process of obtaining		76.9
<b>A8c, A8d. Other certification (including a license or certificate in social work or nursing)</b>	28	
Already have or In the process of obtaining		25.0
Do not have/Not in the process of obtaining		75.0

Note: For notes and limitations applying to the MSHS Program Director survey data, see [Guidance for Interpreting Tables in Sections C-G: Surveys and Parent Interview](#).

Table C.3. MSHS Program Directors: Background Information (Survey, Section A)

Item	<i>n</i>	Percentage (%) of Program Directors	Mean	Min	Max
<b>A9. What is your sex? (Check one only.)</b>	32				
Male		18.8	-	-	-
Female		81.3	-	-	-
Other		0.0	-	-	-
<b>A10.* Age at time of survey</b>	30	-	55.00	42.00	75.00
49 years or younger		30.0	-	-	-
50 — 59 years		43.3	-	-	-
60 years or older		26.7	-	-	-
<b>A11. What is your race/ethnicity? (Select one or more.)</b>	32				
American Indian or Alaska Native		6.3	-	-	-
Black or African American		15.6	-	-	-
Hispanic or Latino		40.6	-	-	-
Asian, Native Hawaiian or Other Pacific Islander		0.0	-	-	-
White		40.6	-	-	-
<b>A12. (IF RESPONDENT SELECTS 'HISPANIC OR LATINO' IN A11) Which Hispanic or Latino origin best describes you? (Select one or more.)</b>	13				
Mexican, Mexican-American, Chicano/a		92.3	-	-	-
Puerto Rican or Cuban		0.0	-	-	-
Another Hispanic and/or Latino origin		7.7	-	-	-

Yes		6.3
No		93.8

Source: MSHS Program Director Survey

Note: For notes and limitations applying to the MSHS Program Director survey data, see [Guidance for Interpreting Tables in Sections C-G: Surveys and Parent Interview](#).

<sup>1</sup>The survey also asked respondents about Haitian Creole, Mixtec, Kanjobal and Zapotec. For Haitian Creole, Kanjobal, and Zapotec, no respondents indicated that they understand, speak, read, or write these languages at any level or spoke them as children. The number of respondents to the questions on Haitian Creole ranged from 20 to 21. The number of respondents on questions about Kanjobal ranged from 19 to 21. The number of respondents to the questions on Zapotec ranged from 20 to 21. For Mixtec, 1 respondent indicated that he or she understands, speaks, reads, and write these languages "not well" and no respondents reported that they spoke it as children. The number of respondents to the questions on Mixtec ranged from 19 to 21.

Table C.5. MSHS Program Directors: MSHS Training and Technical Assistance Activities and Resources from Other Organizations (Survey, Section B)

Item	<i>n</i>	Percentage (%) of Program Directors
<b>B1. Which of the following activities does your MSHS training and technical assistance (T/TA) <i>funding</i> directly support? (Check all that apply.)</b>	32	
Attendance at regional, state, or national early childhood conferences		100.0
Paid preparation, planning time		31.3
Mentoring or coaching for teachers		68.8
Workshops and trainings sponsored by your program		100.0
Support or funding to attend workshops/trainings		93.8
Teacher visits to other early childhood classrooms or centers		18.8
A community of learners		18.8
Tuition assistance for teachers		81.3
Onsite CDA, A.A., or B.A. courses for teachers		53.1
Incentives such as gift cards for teachers to participate		0.0
New staff		15.6
Other activity [#1]		6.3
Other activity [#2]		3.1
<b>B2. How often have you or other staff in your program used resources provided by the following organizations? (Check one only.)</b>		
<b>B2a. The National Center on Head Start Program Management and Fiscal Operations</b>	31	
Never or Rarely		12.9
Sometimes		54.8
Often		32.3
<b>B2b. National Center on Early Childhood Development, Teaching, and Learning</b>	31	
Never or Rarely		3.2
Sometimes		41.9
Often		54.8
<b>B2c. National Center on Health and Wellness</b>	30	
Never or Rarely		6.7
Sometimes		53.3
Often		40.0
<b>B2d. National Center on Quality Assurance</b>	30	
Never or Rarely		33.3
Sometimes		40.0
Often		26.7

Table C.5. MSHS Program Directors: MSHS Training and Technical Assistance Activities and Resources from Other Organizations (Survey, Section B) (continued)

Item	<i>n</i>	Percentage (%) of Program Directors
B2e. The National Center on Parent, Family, and Community Engagement	30	
Never or Rarely		6.7
Sometimes		50.0
Often		43.3
B2f. Region XII Training and Technical Assistance & Collaboration Center	32	
Never or Rarely		9.4
Sometimes		28.1
Often		62.5

Note: For notes and limitations applying to the MSHS Program Director survey data, see [Guidance for Interpreting Tables in Sections C-G: Surveys and Parent Interview](#).

Table C.6. MSHS Program Directors: Factors that Make Program Directors' Jobs Harder (Survey, Section B)

Item	<i>n</i>	Percentage (%) of Program Directors
<b>B3. To what extent do the following things make it harder for you to do your job well? (Check one only.)</b>		
<b>B3a. Time constraints (not enough hours in a day)</b>	32	
Great deal harder		50.0
Somewhat harder		40.6
Not at all harder		9.4
<b>B3b. Too many conflicting demands</b>	31	
Great deal harder		51.6
Somewhat harder		38.7
Not at all harder		9.7
<b>B3c. Too many reviews a year</b>	30	
Great deal harder		26.7
Somewhat harder		36.7
Not at all harder		36.7
<b>B3d. Not a high enough salary for the job demands</b>	28	
Great deal harder		28.6
Somewhat harder		39.3
Not at all harder		32.1
<b>B3e. Not enough support staff</b>	31	
Great deal harder		29.0
Somewhat harder		48.4
Not at all harder		22.6
<b>B3f. Not enough training and technical assistance resources for professional development</b>	31	
Great deal harder		6.5
Somewhat harder		22.6
Not at all harder		71.0
<b>B3g. Not enough support and communication from the funding agency</b>	31	
Great deal harder		0.0
Somewhat harder		19.4
Not at all harder		80.6
<b>B3h. Not enough funds for supplies and activities</b>	31	
Great deal harder		22.6
Somewhat harder		45.2
Not at all harder		32.3

Table C.6. MSHS Program Directors: Factors that Make Program Directors' Jobs Harder (Survey, Section B)  
(continued)

Item	<i>n</i>	Percentage (%) of Program Directors
B3i. Limited communication across systems	31	
Great deal harder		9.7
Somewhat harder		51.6
Not at all harder		38.7
B3j. Serving families that speak different languages	31	
Great deal harder		9.7
Somewhat harder		22.6
Not at all harder		67.7
B3k. Serving families that are culturally diverse	31	
Great deal harder		3.2
Somewhat harder		22.6
Not at all harder		74.2
B3l. Serving families that are low-income	31	
Great deal harder		0.0
Somewhat harder		9.7
Not at all harder		90.3
B3m. Staff turnover	32	
Great deal harder		59.4
Somewhat harder		34.4
Not at all harder		6.3
B3n. Limited availability of/or access to parents	31	
Great deal harder		12.9
Somewhat harder		48.4
Not at all harder		38.7
B3o. Not enough qualified teaching staff	31	
Great deal harder		61.3
Somewhat harder		32.3
Not at all harder		6.5
B3p. Anything else	8	
Great deal harder		87.5
Somewhat harder		12.5
Not at all harder		0.0

Note: For notes and limitations applying to the MSHS Program Director survey data, see [Guidance for Interpreting Tables in Sections C-G: Surveys and Parent Interview](#).

<sup>1</sup>Lower response rates for part 3 of question C1 are due to missing data. It is possible that at least some of the missing data for part 3 items can be attributed to the format of the question, since respondents may not have realized that they were expected to answer parts 1 through 3 on each row. Responses to part 3 items should be interpreted with caution.

Table C.8. MSHS Program Directors: Staffing (Survey, Section D)

Item	<i>n</i>	Percentage (%) of Program Directors
<b>D1. What percentage of your teaching staff did your program have to replace this year because the teachers did not return after last year/season? (Check one only.)</b>	30	
0 — 10%		30.0
11 — 20%		53.3
21% — 100%		16.7
<b>D2. What are you doing or trying to do to reduce teacher turnover? (Check all that apply.)</b>	32	
Increasing teacher salaries and benefits		71.9
Hiring or recruiting more assistants or aides		53.1
Providing more or better training or education		78.1
Providing more opportunities for career advancement		40.6
Subsidies		15.6
Providing better fringe benefits		53.1
Giving teachers more say in choice of curriculum and planning of activities		9.4
Providing teachers with better physical facilities		28.1
Decreasing the number of child slots in order to have more fiscal resources to provide teachers with higher salaries and/or benefits		18.8
Extending how long centers are in operation during the year		37.5
Increasing positive relationships at the centers		68.8
Other		18.8

Note: For notes and limitations applying to the MSHS Program Director survey data, see [Guidance for Interpreting Tables in Sections C-G: Surveys and Parent Interview](#).

Table C.10. MSHS Program Directors: Responsibilities (Survey, Section F)

Item	<i>n</i>	Percentage (%) of Program Directors
<b>F1a1. How much of your time is needed for establishing and maintaining partnerships with other organizations in the community?</b>	31	
A lot of my time		9.7
A moderate amount of my time		58.1
Only a little of my time		25.8
None of my time		6.5
<b>F1a2. Would you like additional T/TA support on establishing and maintaining partnerships with other organizations in the community?<sup>1</sup></b>	19	
Yes		10.5
No		89.5
<b>F1b1. How much of your time is needed for completing the program self-assessment?</b>	31	
A lot of my time		22.6
A moderate amount of my time		51.6
Only a little of my time		25.8
None of my time		0.0
<b>F1b2. Would you like additional T/TA support on completing the program self-assessment?</b>	20	
Yes		20.0
No		80.0
<b>F1c1. How much of your time is needed for working on human resources issues (including staffing and hiring)?</b>	30	
A lot of my time		46.7
A moderate amount of my time		46.7
Only a little of my time		6.7
None of my time		0.0
<b>F1c2. Would you like additional T/TA support on working on human resources issues (including staffing and hiring)?</b>	19	
Yes		15.8
No		84.2
<b>F1d1. How much of your time is needed for ensuring compliance with federal standards for Head Start programs?</b>	31	
A lot of my time		67.7
A moderate amount of my time		32.3
Only a little of my time or None of my time		0.0
<b>F1d2. Would you like additional T/TA support on ensuring compliance with federal standards for Head Start programs?</b>	20	
Yes		40.0
No		60.0

Table C.10. MSHS Program Directors: Responsibilities (Survey, Section F) (continued)

Item	<i>n</i>	Percentage (%) of Program Directors
<b>F1e1. How much of your time is needed for ensuring compliance with state or other standards for early childhood programs?</b>	31	
A lot of my time		45.2
A moderate amount of my time		35.5
Only a little of my time		19.4
None of my time		0.0
<b>F1e2. Would you like additional T/TA support on ensuring compliance with state or other standards for early childhood programs?</b>	20	
Yes		15.0
No		85.0
<b>F1f1. How much of your time is needed for designing the training and technical assistance plan for this program?</b>	31	
A lot of my time		9.7
A moderate amount of my time		48.4
Only a little of my time		38.7
None of my time		3.2
<b>F1f2. Would you like additional T/TA support on designing the training and technical assistance plan for this program?</b>	19	
Yes		15.8
No		84.2
<b>F1g1. How much of your time is needed for supervising center directors and other staff?</b>	31	
A lot of my time		19.4
A moderate amount of my time		38.7
Only a little of my time		32.3
None of my time		9.7
<b>F1g2. Would you like additional T/TA support on supervising center directors and other staff?</b>	18	
Yes		0.0
No		100.0
<b>F1h1. How much of your time is needed for evaluating center directors and other staff?</b>	31	
A lot of my time		19.4
A moderate amount of my time		29.0
Only a little of my time		38.7
None of my time		12.9
<b>F1h2. Would you like additional T/TA support on evaluating center directors and other staff?</b>	18	
Yes		0.0
No		100.0

Table C.10. MSHS Program Directors: Responsibilities (Survey, Section F) (continued)

Item	<i>n</i>	Percentage (%) of Program Directors
<b>F1i1. How much of your time is needed for providing educational leadership/establishing the curriculum?</b>	30	
A lot of my time		10.0
A moderate amount of my time		16.7
Only a little of my time		60.0
None of my time		13.3
<b>F1i2. Would you like additional T/TA support on providing educational leadership/establishing the curriculum?</b>	17	
Yes		11.8
No		88.2
<b>F1j1. How much of your time is needed for reviewing child assessment results?</b>	30	
A lot of my time		6.7
A moderate amount of my time		30.0
Only a little of my time		43.3
None of my time		20.0
<b>F1j2. Would you like additional T/TA support on reviewing child assessment results?</b>	18	
Yes		11.1
No		88.9
<b>F1k1. How much of your time is needed for data-driven decision making and/or evaluation?</b>	31	
A lot of my time		45.2
A moderate amount of my time		41.9
Only a little of my time		12.9
None of my time		0.0
<b>F1k2. Would you like additional T/TA support on data-driven decision making and/or evaluation?</b>	22	
Yes		40.9
No		59.1
<b>F1l1. How much of your time is needed for strategic planning?</b>	30	
A lot of my time		43.3
A moderate amount of my time		33.3
Only a little of my time		23.3
None of my time		0.0
<b>F1l2. Would you like additional T/TA support on strategic planning?</b>	20	
Yes		30.0
No		70.0

Table C.10. MSHS Program Directors: Responsibilities (Survey, Section F) (continued)

Item	<i>n</i>	Percentage (%) of Program Directors
<b>F1m1. How much of your time is needed for promoting parent and family engagement?</b>	30	
A lot of my time		3.3
A moderate amount of my time		53.3
Only a little of my time		43.3
None of my time		0.0
<b>F1m2. Would you like additional T/TA support on promoting parent and family engagement?</b>	19	
Yes		21.1
No		78.9
<b>F1n1. How much of your time is needed for fiscal management?</b>	30	
A lot of my time		56.7
A moderate amount of my time		40.0
Only a little of my time		3.3
None of my time		0.0
<b>F1n2. Would you like additional T/TA support on fiscal management?</b>	20	
Yes		25.0
No		75.0
<b>F1o1. How much of your time is needed for addressing facilities, equipment, and transportation issues?</b>	31	
A lot of my time		25.8
A moderate amount of my time		61.3
Only a little of my time		12.9
None of my time		0.0
<b>F1o2. Would you like additional T/TA support on addressing facilities, equipment, and transportation issues?</b>	18	
Yes		11.1
No		88.9
<b>F1p1. How much of your time is needed for monitoring children's progress toward school readiness goals?</b>	31	
A lot of my time		9.7
A moderate amount of my time		32.3
Only a little of my time		51.6
None of my time		6.5
<b>F1p2. Would you like additional T/TA support on monitoring children's progress toward school readiness goals?</b>	18	
Yes		16.7
No		83.3

Table C.10. MSHS Program Directors: Responsibilities (Survey, Section F) (continued)

Item	<i>n</i>	Percentage (%) of Program Directors
<b>F1q1. How much of your time is needed for working directly with families or addressing family/child issues?</b>	31	
A lot of my time		0.0
A moderate amount of my time		16.1
Only a little of my time		74.2
None of my time		9.7
<b>F1q2. Would you like additional T/TA support on working directly with families or addressing family/child issues?</b>	18	
Yes		5.6
No		94.4

Source: MSHS Program Director Survey

Note: For notes and limitations applying to the MSHS Program Director survey data, see [Guidance for Interpreting Tables in Sections C-G: Surveys and Parent Interview](#).

<sup>1</sup>Lower response rates for part 2 of each question in this table (F1a2, F1b2, etc.) are due to missing data. It is possible that at least some of the missing data for part 2 items can be attributed to the grid format of the question, since respondents may not have realized that they were expected to answer both part 1 and part 2 on each row of the grid. Responses to part 2 items should be interpreted with caution.

Table C.11. MSHS Program Directors: Other Sources of Funding Besides ACF MSHS (Survey, Section F)

Item	<i>n</i>	Percentage (%) of Program Directors
<b>F2. Does your program receive any funds from the following sources <i>other than ACF MSHS</i> funding?</b>		
F2a. Tuitions and fees paid by parents – including parent fees and additional fees paid by parents such as registration fees, transportation fees, late pick up/late payment fees	31	
Yes		9.7
No		90.3
F2b. Tuitions paid by state government programs (vouchers/certificates, state contracts, transportation, state Pre-K funds, child care subsidies, grants from state agencies)	31	
Yes		48.4
No		51.6
F2c. Local government (e.g., Pre-K paid by local school board or other local agency, grants from county government)	30	
Yes		33.3
No		66.7
F2d. Revenues from community organizations or other grants (e.g., United Way, local charities, or other service organizations)	30	
Yes		36.7
No		63.3
F2e. Revenues from fund raising activities, cash contributions, gifts, bequests, special events	29	
Yes		31.0
No		69.0
F2f. Regional Head Start or Early Head Start	29	
Yes		62.1
No		37.9
F2g. Consulting Fees	28	
Yes		3.6
No		96.4
F2h. Other	8	
Yes		25.0
No		75.0

Table C.12. MSHS Program Directors: Changes to MSHS Programs (Survey, Section F)

Item	<i>n</i>	Percentage (%) of Program Directors	Mean	<i>Min</i>	<i>Max</i>
<b>F3. In the past <i>three years</i>, have you encountered challenging problems in any of the following areas? (Check all that apply.)</b>	31				
Recruiting enough infants and toddlers to fill slots		45.2	-	-	-
Recruiting enough preschoolers to fill slots		64.5	-	-	-
Recruiting enough qualified infant and toddler teachers		77.4	-	-	-
Recruiting enough qualified preschool teachers		71.0	-	-	-
Recruiting enough other qualified program staff		61.3	-	-	-
Recruiting enough qualified bus drivers		61.3	-	-	-
Training teachers or staff		25.8	-	-	-
Finding or constructing additional space/facilities		41.9	-	-	-
Maintaining the appropriate number of centers		12.9	-	-	-
Managing the number of parents/families		3.2	-	-	-
Managing the number of staff		19.4	-	-	-
Staff turnover		77.4	-	-	-
Transportation (e.g., buses)		51.6	-	-	-
Other		22.6	-	-	-
<b>F4. Compared to <i>three years ago</i>, does this MSHS program now serve a greater number of children, fewer children, or about the same number of children? (Check one only.)</b>	30				
A greater number of children		16.7	-	-	-
Fewer children		43.3	-	-	-
About the same number of children		40.0	-	-	-
<b>F5. Compared to <i>three years ago</i>, does this MSHS program now serve a greater number of migrant/seasonal children, fewer migrant/seasonal children, or about the same number of migrant/seasonal children? (Check one only.)</b>					
<b>F5a. Migrant Children</b>	31				
A greater number of children		9.7	-	-	-
Fewer children		64.5	-	-	-
About the same number of children		25.8	-	-	-
<b>F5b. Seasonal Children</b>	30				
A greater number of children		80.0	-	-	-
Fewer children		0.0	-	-	-
About the same number of children		20.0	-	-	-

Table C.12. MSHS Program Directors: Changes to MSHS Programs (Survey, Section F) (continued)

Item	<i>n</i>	Percentage (%) of Program Directors	Mean	<i>Min</i>	<i>Max</i>
<b>F6. Compared to <i>three years ago</i>, how many centers, classrooms, and child slots did your program open/add or reduce/close for reasons other than the beginning or end of the season (e.g., due to changes in funding levels, migrancy patterns, weather-related impacts on crops)? Please only consider <i>ACF-funded MSHS centers or classrooms</i> – not those funded by other sources.<sup>1</sup></b>					
F6a. New centers opened	22	-	0.82	0.00	4.00
F6b. Centers closed	21	-	0.71	0.00	4.00
F6c. New classrooms added	23	-	2.65	0.00	18.00
F6d. Classrooms closed	22	-	4.05	0.00	38.00
F6e. New child slots added	24	-	44.46	0.00	484.00
F6f. Child slots reduced	22	-	51.73	0.00	451.00
<b>F7. Why did your program change in these ways over the <i>past three years</i>? (Check all that apply.)</b>	27				
Change in migrancy patterns		77.8	-	-	-
Change in MSHS eligibility definition in the Head Start Performance Standards		18.5	-	-	-
Change in number of families applying		48.1	-	-	-
Change in length of waiting list		22.2	-	-	-
Change in funding		14.8	-	-	-
Change in operational cost		25.9	-	-	-
Change in availability of other local child care options		48.1	-	-	-
Change in amount of physical space		11.1	-	-	-
Change in number of qualified staff		48.1	-	-	-
Other		18.5	-	-	-

Table C.12. MSHS Program Directors: Changes to MSHS Programs (Survey, Section F) (continued)

Item	<i>n</i>	Percentage (%) of Program Directors	Mean	<i>Min</i>	<i>Max</i>
<b>F8. To what degree have the following affected program operations in the <i>past year</i>? (Check one only.)</b>					
F8a. Climate change	29				
Very Positively		0.0	-	-	-
Somewhat Positively		20.7	-	-	-
Not at all		37.9	-	-	-

Note: For notes and limitations applying to the MSHS Program Director survey data, see [Guidance for Interpreting Tables in Sections C-G: Surveys and Parent Interview](#).

<sup>1</sup>Lower response rates for part 2 of each question in this table (F1a2, F1b2, etc.) are due to missing data. It is possible that at least some of the missing data for part 2 items can be attributed to the grid format of the question, since respondents may not have realized that they were expected to answer both part 1 and part 2 on each row of the grid. Responses to part 2 items should be interpreted with caution.

Table C.18. MSHS Program Directors: Transitions (Survey, Section I)

Item	<i>n</i>	Percentage (%) of Program Directors
<b>I1. In what ways does your program facilitate MSHS families' transitions out of the area if they migrate or move? (Check all that apply.)</b>	32	
Provide list of other MSHS centers to families		81.3
Provide list of early childhood programs and/or schools to families		53.1
Create a folder of important paperwork that families can give to next center/school		87.5
Create a folder of important paperwork to keep for their own records		75.0
Talk with staff at next center/school		53.1
Electronically transfer records to next center/school		34.4
MOUs (memorandums of understanding) with other grantees		25.0
Other		3.1
None of the above		0.0
<b>I2. To what degree do you communicate with other grantee agencies to discuss the following issues? (Check one only.)</b>		
<b>I2a. The migration of specific families</b>	31	
A great deal		16.1
Somewhat		54.8
Not at all		29.0
<b>I2b. Changes in the weather, crops or migration patterns that might affect this year's operational schedules</b>	31	
A great deal		3.2
Somewhat		61.3
Not at all		35.5
<b>I2c. Overall changes in the migration patterns across multiple years</b>	31	
A great deal		9.7

**SECTION D. DATA TABLES FOR MSHS CENTER DIRECTORS**

This section presents data tables for information obtained from the MSHS Center Director Survey. Readers are encouraged to pay careful attention to the following information when reviewing information in this section:

- Notes and limitations applying to the survey, which can be found in the section on [Guidance for Interpreting Tables in Sections C-G: Surveys and Parent Interview](#).
- Information about the survey can be found in the [MSHS Staff Surveys and Parent Interview](#) section of the [Measures](#) chapter.
- Footnotes provided below each table.

The constructs covered in this section include:

- Center Director Experience, Education, and Knowledge ([Table D.1 – D.4](#))
- Staff Training and Support for Center Staff ([Table D.5 – D.11](#))
- Class Composition ([Table D.12 – D.13](#))
- Staffing, Recruitment, and Compensation ([Table D.14 – D.15](#))
- Community Partnerships ([Table D.16](#))
- Use of Data and Information ([Table D.17](#))
- Family Engagement ([Table D.18 – D.21](#))
- Instructional Practice(s) ([Table D.22](#))
- Language(s) of Instruction and Language Policies ([Table D.23](#))
- Transitions ([Table D.24](#))

Table D.1. MSHS Center Directors: Experience (Survey, Section A)

Item	<i>n</i>	Percentage (%) of Center Directors	Mean	<i>SE</i>	<i>Min</i>	<i>Max</i>
<b>A1. In total, how many years (including this year) have you worked in the early childhood field? Please round to the nearest year.</b>	200	-	18.70	0.61	1.00	43.00
0 — 5 years		7.5	-	1.98	-	-
6 — 10 years		16.8	-	2.50	-	-
11 — 15 years		15.3	-	2.19	-	-

Note: For notes and limitations applying to the MSHS Center Director survey data, see [Guidance for Interpreting Tables in Sections C-G: Surveys and Parent Interview](#).

<sup>1</sup>The survey also asked respondents about Kanjobal and Zapotec. For Kanjobal, no respondents indicated that they understand, speak, read, or write these languages at any level and 1 respondent reported that he or she spoke it as a child. The number of respondents to the questions on Kanjobal ranged from 158 to 163. For Zapotec, no respondents indicated that they understand, speak, read, or write these languages at any level and 2 respondents reported that they spoke it as children. The number of respondents to the questions on Zapotec ranged from 157 to 160.

Table D.5. MSHS Center Directors: Staff Training and Support (Survey, Section B)

Item	<i>n</i>	Percentage (%) of Center Directors	<i>SE</i>
<b>B1. Programs can support teachers' professional development in a lot of different ways. Does your center offer the following to teachers? (Mark one only.)</b>			
B1a. Regular meetings with teachers to talk with them about their work and progress	201		
Yes		98.6	0.85
No		1.4	0.85
B1b. Time off/funding to attend regional, state, or national early childhood conferences	196		
Yes		72.9	3.07
No		27.1	3.07
B1c. Paid preparation/planning time	196		
Yes		87.9	2.03
No		12.1	2.03
B1d. Mentor(s) or coaches	197		
Yes		92.2	2.23
No		7.8	2.23
B1e. Workshops or trainings sponsored by the program/In-service trainings	199		
Yes		98.5	0.62
No		1.5	0.62
B1f. Time off/funding to attend workshops/trainings provided by other organizations	192		
Yes		75.3	2.96
No		24.7	2.96
B1g. Visits to other classrooms or centers	194		
Yes		64.1	3.30
No		35.9	3.30
B1h. A community of learners, also called a professional learning community, facilitated by an expert	184		
Yes		53.5	3.71
No		46.5	3.71
B1i. Incentives such as gift cards to encourage teachers to participate in professional development activities	189		
Yes		16.2	2.58
No		83.8	2.58
B1j. Time release or subsidy to complete higher education courses at a college or university	195		
Yes		79.4	3.01
No		20.6	3.01

Table D.18. MSHS Center Directors: Family Engagement (Survey, Section G)

Item	<i>n</i>	Percentage (%) of Center Directors	SE
<b>G1. What are the <i>top three</i> methods you use to communicate with parents about their child(ren)? (Mark up to three.)<sup>1</sup></b>	199	-	27.85
Bus monitor		29.3	3.41
Parent workshops		12.3	2.23
Parent meetings		67.1	3.02
Notes/newsletters		49.6	3.14
Parent/teacher conferences		69.5	2.82
Group meetings		7.7	1.84
Phone calls		60.7	3.36
Home visits		66.4	3.86
Poster/bulletin boards		16.3	2.77
Other		3.8	1.40
<b>G2. What are the <i>top three</i> approaches your center uses to encourage parents to participate in MSHS activities? (Mark up to three.)</b>	186	-	16.21
Offer incentives such as door prizes or samples of products		40.5	3.57
Provide transportation		25.2	2.78
Provide child care		87.6	2.48
Provide interpreters		40.8	3.72
Serve food such as snacks or supper		87.4	2.58
Other		2.3	1.08
<b>G3. In the last month, what activities did your center offer for families? (Mark all that apply.)</b>	199	-	26.14
Parent orientation		43.2	2.89
Parent meetings		92.1	1.87
Multi-family socializations		15.5	2.50
Events for the entire family		41.4	3.51
Workshops on parenting		31.7	3.36
Training or workshops for families of dual language learners (DLLs)		8.3	2.13
Parent training or workshops on subjects other than DLLs		17.2	2.67
Information on child development		56.1	3.50
Some other services (Specify)		26.2	3.37
None of the above		0.3	0.34

Table D.18. MSHS Center Directors: Family Engagement (Survey, Section G) (continued)

Item	<i>n</i>	Percentage (%) of Center Directors	<i>SE</i>
<b>G4. How successful would you say your center has been in involving fathers in MSHS? (Mark one only.)</b>	198	-	9.01
Very successful		16.3	2.36
Somewhat successful		68.0	3.16
Mostly unsuccessful		13.0	2.53
Very unsuccessful		2.8	0.97
<b>G5. Does your center use a particular parent education or parent support curriculum? (Mark one only.)</b>	190	-	6.18
Yes		58.1	3.09
No		41.9	3.09
<b>G6. Which of the following strategies do you use to engage culturally and linguistically diverse families? (Mark all that apply.)</b>	194	-	21.72
The center has a mission statement and/or policies that promote culturally and linguistically appropriate practices.		81.6	3.17
Professional development opportunities are available to staff to learn about culturally and linguistically appropriate practices.		61.7	3.16
Bilingual or trained interpreters are available to families who may require this assistance.		81.6	2.73
Our center hires staff that share similar cultural and linguistic backgrounds as children and families in the center.		84.7	2.34
Printed materials are written in families' native or primary language.		94.4	1.51
Pictures, posters and other materials reflect the cultures and ethnic backgrounds of children and families.		94.5	1.31
Books and other literacy materials represent the different cultures of children and families served.		94.1	1.35
Toys and other play items represent the different cultures of children and families served.		86.4	2.04
Music, videos, or other media represent the different cultures of children and families served.		86.3	2.23
Meals include options that represent the different cultures of children and families served.		86.5	1.88
None of the above.		0.0	0.00

Source: MSHS Center Director Survey

Note: For notes and limitations applying to the MSHS Center Director survey data, see [Guidance for Interpreting Tables in Sections C-G: Surveys and Parent Interview](#).

<sup>1</sup>Respondents were instructed to select their top three methods for communicating with parents. Because a large proportion of respondents selected more than three options, all responses are reported. For respondents who selected three options, it is not known if they would have selected additional options had they been instructed to mark all that apply.

Table D.19. MSHS Center Directors: Barriers to Family Participation and Enrollment (Survey, Section G)

Item	<i>n</i>	Percentage (%) of Center Directors	SE
<b>G7. Some parents have a hard time <i>participating</i> in their child's MSHS center activities. What do you see as the major barriers to engaging parents? In other words, for parents who aren't engaged, what keeps them from participating? (Mark all that apply.)</b>	198	-	26.59
They have a need for child care.		13.5	2.45
Their work schedules interfere.		94.9	1.74
Their school or training schedules interfere.		8.8	1.88
They need transportation.		36.0	2.96
They don't know other parents or staff at MSHS.		6.8	1.80
They feel uncomfortable at MSHS.		4.9	1.37
They have health problems that interfere.		3.0	1.25
Some of the teachers are uncomfortable with parents in the classroom.		0.0	0.00
MSHS doesn't provide enough opportunities for them to participate.		0.3	0.35
They have had bad experiences with MSHS in the past.		1.3	0.77
They are uncomfortable because of language or cultural differences.		6.7	1.82
They are concerned for their safety while getting to MSHS.		8.8	1.97
They need more support from their spouse or partner.		23.8	3.07
The opportunities MSHS provides are not of interest to them.		7.3	1.76
They do not trust programs funded by the government.		4.6	1.27
Other		10.3	2.13
<b>G8. Some parents experience barriers to <i>enrolling</i> their child in MSHS. What do you see as the <i>top three</i> major barriers for families trying to enroll their children in MSHS? (Mark up to three.)</b>	188	-	21.69
The paperwork burden is too high.		60.9	3.51
Other child care arrangements in the area better meet their needs.		26.1	3.13
Their work schedules interfere.		58.9	3.39
They need transportation.		37.0	3.34
They don't know about MSHS.		27.1	3.17
They feel uncomfortable at MSHS.		0.9	0.66
They are concerned for their safety while getting to MSHS.		6.4	1.67
The opportunities MSHS provides are not of interest to them.		1.5	0.90
They do not trust programs funded by the government.		9.2	1.94

I3b1. Toddlers (12 to 35 months)	179		
English used exclusively		0.0	0.00
English for instruction with some use of home language(s)		1.2	0.85
Use of both English and home language(s) for instruction		49.2	3.27
Use home language(s) for instruction with some use of English		33.0	3.34
Home language used exclusively		16.6	2.66
I3c1. Preschoolers (36+ months)	182		
English used exclusively		2.3	1.16
English for instruction with some use of home language(s)		8.4	1.85
Use of both English and home language(s) for instruction		65.6	3.34
Use home language(s) for instruction with some use of English		22.4	2.98
Home language used exclusively		1.3	0.92
<b>I3.2. Is there a formal (written) language policy for this age group?</b>			
I3a2. Infants (birth to 11 months)	127		
Yes		67.8	4.03
No		32.2	4.03
I3b2. Toddlers (12 to 35 months)	133		
Yes		72.2	3.57
No		27.8	3.57
I3c2. Preschoolers (36+ months)	143		
Yes		81.0	3.38
No		19.0	3.38
<b>I4. Has your center used ACF's Dual Language Learner Toolkit?</b>	151		
Yes, we have used it		26.8	3.56
No, not yet		73.2	3.56
<b>I5. Please indicate the extent to which you agree or disagree with the following statements. (Mark one only.)</b>			
I5a. Parents who do not speak English play a critical role in their children's learning and development.	191		
Strongly disagree		1.2	0.85
Disagree		3.3	1.39
Neither agree nor disagree		5.1	1.70
Agree		17.2	2.40
Strongly agree		73.2	3.10

Table D.23. MSHS Center Directors: Language(s) of Instruction and Language Policies (Survey, Section I) (continued)

Item	<i>n</i>	Percentage (%) of Center Directors	<i>SE</i>
I5b. Teacher knowledge of a second language is beneficial in the classroom.	197		
Strongly disagree		0.9	0.69
Disagree		0.9	0.69
Neither agree nor disagree		0.6	0.56
Agree		20.4	2.74
Strongly agree		77.2	2.86
I5c. When a child can begin to participate in school activities in English, there is no need to continue instruction in the home language.	197		
Strongly disagree		51.3	3.20
Disagree		38.9	3.00
Neither agree nor disagree		6.9	1.84
Agree		2.3	1.20
Strongly agree		0.6	0.55
I5d. Young children learn a second language more quickly, thoroughly, and easily than adults.	197		
Strongly disagree		2.6	1.20
Disagree		1.2	0.84
Neither agree nor disagree		4.3	1.49
Agree		30.5	2.85
Strongly agree		61.4	2.98
I5e. Games and songs in Spanish are useful for language development in classrooms with bilingual Spanish-speaking children.	196		
Strongly disagree		2.6	1.21
Disagree		0.0	0.00
Neither agree nor disagree		2.1	1.10
Agree		34.4	3.02
Strongly agree		60.9	2.83
I5f. Language drills are appropriate for young children learning a second language.	195		
Strongly disagree		13.5	2.69
Disagree		17.8	2.73
Neither agree nor disagree		19.8	2.89
Agree		23.3	3.27
Strongly agree		25.6	3.06

Table D.23. MSHS Center Directors: Language(s) of Instruction and Language Policies (Survey, Section I) (continued)

Item	<i>n</i>	Percentage (%) of Center Directors	<i>SE</i>
I5g. It is of primary importance that children learn English in order to support their school readiness.	195		
Strongly disagree		3.9	1.38
Disagree		5.5	1.72
Neither agree nor disagree		15.3	2.44
Agree		38.2	3.17
Strongly agree		37.2	3.09
I5h. Book reading in the classroom should be done mostly in English.	197		
Strongly disagree		24.6	3.06
Disagree		43.8	3.83
Neither agree nor disagree		22.3	3.05
Agree		7.7	1.84
Strongly agree		1.6	0.88
I5i. Parents who speak a language other than English should be encouraged to read to and/or talk about books with their children in the home language.	197		
Strongly disagree		2.6	1.19
Disagree		1.1	0.79
Neither agree nor disagree		2.3	1.04
Agree		33.3	3.34
Strongly agree		60.7	3.37
I5j. Parents who speak a language other than English should be encouraged to speak only English to their children to facilitate the transition to English.	196

**SECTION E. DATA TABLES FOR MSHS TEACHERS**

---

This section presents data tables for information obtained from the MSHS Teacher Survey. Readers are encouraged to pay careful attention to the following information when reviewing information in this section:

- Notes and limitations applying to the survey, which can be found in the section on [Guidance for Interpreting Tables in Sections C-G: Surveys and Parent Interview](#).
- Information about the survey can be found in the [MSHS Staff Surveys and Parent Interview](#) section of the [Measures](#) chapter.
- Footnotes provided below each table.

The constructs covered in this section include:

- Teacher Background, Experience, Education, Knowledge, and Beliefs ([Table E.1 – E.6](#))
- Teacher Linguistic Abilities ([Table E.6](#))
- Teacher Well-Being ([Table E.7 – E.10](#))
- Teacher Training and Support ([Table E.10](#))
- Class Composition ([Table E.11](#))
- Staffing and Compensation ([Table E.12](#))
- Instructional and Assessment Practices ([Table E.13 – E.16](#))
- Language(s) of Instruction and Language Policies ([Table E.16– E.19](#))
- Disability Services ([Table E.18](#))
- Family Engagement ([Table E.19](#))

Table E.1. MSHS Teachers: General Teaching Experience (Survey, Section A)

Item	<i>n</i>	Percentage (%) of Teachers	Mean	<i>SE</i>	<i>Min</i>	<i>Max</i>
<b>A1. In total, how many years (including this year) have you been teaching (as either lead or assistant teacher)? Please round to the nearest year.</b>	118	-	15.20	1.05	1	42
0 — 5 years		18.8	-	6.26	-	-
6 — 10 years		11.2	-	3.14	-	-
11 — 15 years		21.1	-	4.15	-	-
16 — 20 years		22.0	-	5.15	-	-

Table E.2. MSHS Teachers: MSHS Teaching Experience (Survey, Section A)

Item	<i>n</i>	Percentage (%) of Teachers	<i>SE</i>
<b>A5. What experiences have you had with migrant and seasonal families and/or with the MSHS program before becoming an MSHS teacher? (Mark all that apply.)</b>	118		
Family members are/were migrant and seasonal farmworkers		52.8	6.25
You are/were a migrant or seasonal farmworker		36.6	4.43
Assistant Teacher		56.5	5.68
Administrator (Assistant Center Director, Assistant Program Director, Center Director, Area Coordinator, Regional Director, Program Director)		2.4	1.42
Administrative Support (Secretary, Financial Officer, and Information Technology Director)		1.2	1.22
Education, Health, and Social Services (Educational Specialist, Education Manager, Component Coordinator, Outreach Staff/Recruiter, Family Service Worker, Counselor/Mental Health Professional, Social Worker, Health Care Worker, Community Organizer)		9.2	3.02
Support Staff (Kitchen Staff, Custodial Staff, Bus Driver, Bus Monitor, Transportation Supervisor)		30.6	6.92
Other		17.0	3.65
None of the above		10.8	4.48
<b>A6. At times staff work in various positions at a center. Currently, which of the following positions do you <i>regularly</i> work in MSHS in addition to being a teacher? (Mark all that apply.)</b>	116		
Assistant Teacher		32.2	4.72
Administrator (Assistant Center Director, Assistant Program Director, Center Director, Area Coordinator, Regional Director, Program Director)		4.0	3.19
Administrative Support (Secretary, Financial Officer, and Information Technology Director)		1.3	1.26
Education, Health, and Social Services (Educational Specialist, Education Manager, Component Coordinator, Outreach Staff/Recruiter, Family Service Worker, Counselor/Mental Health Professional, Social Worker, Health Care Worker, Community Organizer)		4.6	3.22
Support Staff (Kitchen Staff, Custodial Staff, Bus Driver, Bus Monitor, Transportation Supervisor)		22.7	5.66
Other		15.2	4.41
None of the above		36.6	6.75
<b>A7. How often was your teaching assignment changed in the last week?</b>	117		
Not changed		90.1	4.17
Changed once		5.1	2.23
Changed more than once		4.9	2.86

Table E.2. MSHS Teachers: MSHS Teaching Experience (Survey, Section A) (continued)

Item	<i>n</i>	Percentage (%) of Teachers	SE
<b>A8. What do you do when the center is closed for the season? (Mark all that apply.)</b>	114		
Work at another Migrant and Seasonal Head Start center		6.1	3.06
Work at a Head Start center		9.5	3.70
Work at another early childhood program		10.3	3.91
Work at another job part-time		7.8	2.94
Work at another job full-time		7.9	3.56
Look for another job		20.0	5.46
Receive unemployment benefits		62.7	5.68
Go to school		17.5	5.01
Other (including Receive public assistance and Self-employed)		22.6	4.22

Table E.3. MSHS Teachers: Education and Training (Survey, Section A)

Item	<i>n</i>	Percentage (%) of Teachers	SE
<b>A9. What is the <i>highest</i> grade or year of school that you <i>completed</i>? (Mark one only.)</b>	117		
Less than high school diploma/equivalent		5.0	2.03
High school diploma/equivalent		23.9	3.89
Vocational/technical program with some college (including vocational/technical diploma after HS with or without diploma and some college without degree)		16.4	4.37
Associate's degree		32.0	5.48
Bachelor's degree		19.9	4.85
Higher than bachelor's degree (including some professional/graduate school without degree or master's, doctoral or professional degree)		2.8	1.70
<b>A10. (IF A9 IS 'ASSOCIATE'S DEGREE' OR HIGHER) In what field did you obtain your <i>highest</i> degree? (Mark one only.)</b>	55		
Child development, human development, or developmental psychology		16.6	7.38
Early childhood education		48.1	9.02
Elementary education		12.3	4.28
Curriculum development or Bilingual education or literacy		0.0	0.00
Other field (including special education; administration; psychology, counseling, or social work; and public health)		22.9	7.32
<b>A11. (IF A9 IS 'SOME COLLEGE WITHOUT A DEGREE' OR HIGHER) Have you completed any college/university courses on bilingual/Dual Language Learner (DLL) children? (Mark one only.)</b>	76		
Yes, a whole course was dedicated to bilingual/DLL children		9.9	3.97
Yes, a large part of a course was dedicated to bilingual/DLL children		6.6	3.39
Yes, one or two classes of a course was dedicated to bilingual/DLL children		16.8	6.60
No		66.7	7.70
<b>A12. Do you have, or are you in the process of acquiring, any of the following certifications?</b>			
<b>A12a. A Childhood Development Associate (CDA) credential</b>	99		
Already have		71.6	8.45
In the process of obtaining		8.2	3.98
Do not have/Not in the process of obtaining		20.2	6.22
<b>A12b. Another certification in early childhood development</b>	83		
Already have		40.0	6.44
In the process of obtaining		8.0	2.84
Do not have/Not in the process of obtaining		51.9	6.42

Table E.3. MSHS Teachers: Education and Training (Survey, Section A) (continued)

Item	<i>n</i>	Percentage (%) of Teachers	<i>SE</i>
A12c-A12e. Other certification (including a license or certificate in social work or nursing and a bilingual certification)	63		
Already have		10.8	4.16
In the process of obtaining		9.1	5.59
Do not have/Not in the process of obtaining		80.1	5.91

Disagree		0.3	0.35
Neither agree nor disagree		1.2	0.96
Agree		36.4	7.30
Strongly agree		62.0	7.55
A14f. (IF A14 IS NOT 'N/A') In order to be fair, child care teachers must treat all children alike.	96		
Strongly disagree		2.2	1.41
Disagree		5.3	2.04
Neither agree nor disagree		5.6	3.56
Agree		28.3	4.98
Strongly agree		58.7	6.21
A14g. (IF A14 IS NOT 'N/A') I believe that teachers have to carefully supervise children's development to make sure that it is progressing normally.	97		
Strongly disagree		0.6	0.65
Disagree or Neither agree nor disagree		0.0	0.00
Agree		36.3	8.38
Strongly agree		63.0	8.46
A14h. (IF A14 IS NOT 'N/A') Parents have valuable information to share about how teachers can work effectively with their children.	97		
Strongly disagree		0.9	0.70
Disagree		0.0	0.00
Neither agree nor disagree		1.5	1.44
Agree		37.6	4.30
Strongly agree		60.1	4.04
A14i. (IF A14 IS NOT 'N/A') Even though infants or toddlers enjoy their time in child care, parents are still the most important people in their children's lives.	97		
Strongly disagree		2.3	2.07
Disagree		0.0	0.00
Neither agree nor disagree		1.5	1.44
Agree		16.3	4.72
Strongly agree		79.9	4.97

Table E.5. MSHS Teachers: Teacher Beliefs: Infants and Toddlers (Survey, Section A) (continued)

Item	<i>n</i>	Percentage (%) of Teachers	<i>SE</i>
A14j. (IF A14 IS NOT 'N/A') It is good for infants and toddlers to experience many different child care providers so they can learn to modify their behavior to meet the demands of others.	95		
Strongly disagree		27.7	4.23
Disagree		40.8	5.41
Neither agree nor disagree		13.6	4.46
Agree		11.8	3.63
Strongly agree		6.0	3.72

Note: For notes and limitations applying to the MSHS Teacher survey data, see [Guidance for Interpreting Tables in Sections C-G: Surveys and Parent Interview](#).

<sup>1</sup>The survey also asked respondents about Kanjobal and Zapotec. For these languages, no respondents indicated that they understand, speak, read, or write these languages at any level or spoke them as children. The number of respondents to the questions on Kanjobal ranged from 76 to 84. The number of respondents to the questions on Zapotec ranged from 76 to 82.

Table E.8. MSHS Teachers: Satisfaction with Teaching (Survey, Section C)

Item	<i>n</i>	Percentage (%) of Teachers	<i>SE</i>
<b>C1. How much do you agree or disagree with each of the following statements about teaching? (Mark one only.)</b>			
C1a. I really enjoy my present teaching job.	119		
Strongly disagree, Disagree, or Neither agree nor disagree		1.7	1.04
Agree		29.3	5.58
Strongly agree		68.9	5.65
C1b. I am certain I am making a difference in the lives of the children I teach.	119		
Strongly disagree, Disagree, or Neither agree nor disagree		0.0	0.00
Agree		30.5	6.26
Strongly agree		69.5	6.26
C1c. If I could start over, I would choose teaching again as my career.	119		
Strongly disagree, Disagree, or Neither agree nor disagree		9.4	2.53
Agree		29.3	5.06
Strongly agree		61.3	6.35
C1d. In five years I think I will still be teaching young children.	119		
Strongly disagree, Disagree, or Neither agree nor disagree		13.6	4.51
Agree		29.3	4.43
Strongly agree		57.1	6.42
C1e. I feel that I am treated with respect in my present teaching job.	118		
Strongly disagree, Disagree, or Neither agree nor disagree		14.0	3.87
Agree		47.8	5.67
Strongly agree		38.2	5.12

Table E.10. MSHS Teachers: Center for Epidemiologic Studies Depression (CES-D) Scale, Reliability and Summary Scores, (Survey, Section C)

Scale	<i>n</i>	Number of Items	Cronbach's Alpha	Percentage (%) of Respondents	Mean	SE	Min	Max
C3. CES-D 12-item scale	115	12	0.91	-	3.60	1.05	0	36
Not depressed		-	-	77.2	-	5.21	-	-
Mildly depressed		-	-	13.3	-	3.97	-	-
Moderately depressed		-	-	3.8	-	3.05	-	-
Severely depressed		-	-	5.7	-	3.34	-	-

Source: CES-D Scale, National Institute of Mental Health

Notes: This table presents both the reliability of scores and summary statistics for this instrument. Reliability information is presented in the first two columns of the first shaded row and includes the sample size (*n*), the number of items included in the reliability estimate, and the Cronbach's alpha, which is a measure of reliability, or internal consistency. Summary statistics are presented in the rest of the table.

Readers should use caution when interpreting results from the CES-D. This measure was developed for research purposes and does not provide a formal diagnosis of depression. A formal diagnosis can only be determined by a trained mental health professional.

The 12-item CES-D summary score was computed by summing the participant's responses to 12 individual items from the CES-D scales in the Teacher Survey, Assistant Teacher Survey, and Parent Interview. Respondents indicated how frequently during the past week they experienced 12 symptoms – feeling bothered, poor appetite, unable to “shake off the blues,” difficulty focusing, depressed, everything was an effort, fearful, restless sleep, less talkative than usual, lonely, sad, and unable to “get going.” Higher scores indicate more frequent symptoms. The categories that appear in the table above were based on the participant's summary score across those 12 items, with not depressed=0 — 4, mildly depressed=5 — 9, moderately depressed=10 — 14, and severely depressed=15 — 36. The same 12-item version of the CES-D Scale has also been used in the FACES and Baby FACES studies.

For notes and limitations applying to the MSHS Teacher survey data, see [Guidance for Interpreting Tables in Sections C-G: Surveys and Parent Interview](#).

Table E.11. MSHS Teachers: Training and Support (Survey, Section D)

Item	<i>n</i>	Percentage (%) of Teachers	SE
<b>D1. What types of training and support have you received to help you use curriculum? (Mark all that apply.)</b>	119		
Coaching in support		70.8	5.86
Peer support		34.1	6.22
Refresher trainings		70.6	4.59
Learning communities in support of curriculum		17.0	6.10
Workshops		61.6	5.70
No support		0.0	0.00
Other		8.7	3.01

**SECTION F. DATA TABLES FOR MSHS ASSISTANT TEACHERS**

This section presents data tables for information obtained from the MSHS Assistant Teacher Survey. Readers are encouraged to pay careful attention to the following information when reviewing information in this section:

- Notes and limitations applying to the survey, which can be found in the section on [Guidance for Interpreting Tables in Sections C-G: Surveys and Parent Interview](#).
- Information about the survey can be found in the [MSHS Staff Surveys and Parent Interview](#) section of the [Measures](#) chapter.
- Footnotes provided below each table.

The constructs covered in this section include:

- Assistant Teacher Background, Experience, Education, Knowledge, and Beliefs ([Table F.1 – F.6](#))
- Assistant Teacher Linguistic Abilities ([Table F.7 – F.10](#))
- Assistant Teacher Well-Being ([Table F.11 – F.13](#))
- Instructional and Assessment Practices ([Table F.14](#))
- Staffing and Compensation ([Table F.15](#))

Table F.1. MSHS Assistant Teachers: General Teaching Experience (Survey, Section A)

Item	<i>n</i>	Percentage (%) of Assistant Teachers	Mean	SE	Min	Max
<b>A1. In total, how many years (including this year) have you been teaching (as either lead or assistant teacher)? Please round to the nearest year.</b>	99	-	9.73	1.31	1	42
0 — 5 years		41.6	-	6.90	-	-
6 — 10 years		24.8	-	5.52	-	-
11 — 15 years		8.3	-	2.39	-	-
16 — 20 years		17.6	-	6.08	-	-
21 or more years		7.7	-	3.47	-	-
<b>A2. In total, how many years (including this year) have you taught children <i>birth to two years</i> (as either lead or assistant teacher)? Please round to the nearest year.</b>	97	-	6.50	1.11	0	42
0 — 2 years		41.3	-	5.43	-	-
3 — 5 years		22.8	-	5.62	-	-
6 — 9 years		11.0	-	3.68	-	-

Table F.2. MSHS Assistant Teachers: MSHS Teaching Experience (Survey, Section A)

Item	<i>n</i>	Percentage (%) of Assistant Teachers	<i>SE</i>
<b>A5. What experiences have you had with migrant and seasonal families and/or with the MSHS program before becoming an MSHS teacher? (Mark all that apply.)</b>	99		
Family members are/were migrant and seasonal farmworkers		61.2	5.60
You are/were a migrant or seasonal farmworker		31.4	5.60
Teacher		50.6	6.35
Administrator (Assistant Center Director, Assistant Program Director, Center Director, Area Coordinator, Regional Director, Program Director)		0.8	0.82
Administrative Support (Secretary, Financial Officer, and Information Technology Director)		0.0	0.00
Education, Health, and Social Services (Educational Specialist, Education Manager, Component Coordinator, Outreach Staff/Recruiter, Family Service Worker, Counselor/Mental Health Professional, Social Worker, Health Care Worker, Community Organizer)		2.3	1.40
Support Staff (Kitchen Staff, Custodial Staff, Bus Driver, Bus Monitor, Transportation Supervisor)		17.2	4.20
Other		11.5	3.41
None of the above		20.5	3.90
<b>A6. At times staff work in various positions at a center. Currently, which of the following positions do you <i>regularly</i> work in MSHS in addition to being an assistant teacher? (Mark all that apply.)</b>	100		
Teacher		63.0	6.02
Administrator (Assistant Center Director, Assistant Program Director, Center Director, Area Coordinator, Regional Director, Program Director)		0.0	0.00
Administrative Support (Secretary, Financial Officer, and Information Technology Director)		1.2	0.88
Education, Health, and Social Services (Educational Specialist, Education Manager, Component Coordinator, Outreach Staff/Recruiter, Family Service Worker, Counselor/Mental Health Professional, Social Worker, Health Care Worker, Community Organizer)		6.3	2.93
Support Staff (Kitchen Staff, Custodial Staff, Bus Driver, Bus Monitor, Transportation Supervisor)		23.1	5.45
Other		5.8	2.41
None of the above		26.0	5.52
<b>A7. How often was your teaching assignment changed in the last week?</b>	100		
Not changed		88.4	3.42
Changed once		7.4	2.69
Changed more than once		4.2	2.25

Table F.2. MSHS Assistant Teachers: MSHS Teaching Experience (Survey, Section A) (continued)

Item	<i>n</i>	Percentage (%) of Assistant Teachers	<i>SE</i>
<b>A8. What do you do when the center is closed for the season? (Mark all that apply.)</b>	92		
Work at a Head Start center		10.5	3.99
Work at another early childhood program		9.2	3.40
Work at another job part-time		9.2	3.20
Look for another job		28.5	5.51
Receive unemployment benefits		53.5	7.79
Go to school		24.1	5.52
Other (including Work at another Migrant and Seasonal Head Start center, Work at another job full-time, Receive public assistance, and Self-employed)		25.9	6.99

Table F.5. MSHS Assistant Teachers: Assistant Teacher Beliefs: Infants and Toddlers (Survey, Section A)

Item	<i>n</i>	Percentage (%) of Assistant Teachers	<i>SE</i>
<b>A14. Please only answer this question if you have ever taught infants or toddlers. ... The following are statements that some teachers have made about how young children should be taught. Please indicate the extent to which you agree or disagree with the following statements. (Mark one only.)</b>			
A14_na. N/A – I have never taught infants or toddlers.	97	23.5	4.78
A14a. (IF A14 IS NOT 'N/A') It is likely that caregivers will spoil a baby if they respond every time the baby cries.	76		
Strongly disagree		23.6	5.26
Disagree		33.0	10.59
Neither agree nor disagree		23.2	6.93
Agree		9.2	3.71
Strongly agree		11.0	5.22
A14b. (IF A14 IS NOT 'N/A') One of the best ways to prepare a young child to be a good student is to teach him/her to be obedient.	76		
Strongly disagree		7.2	2.75
Disagree		12.4	3.16
Neither agree nor disagree		23.8	5.26
Agree		40.8	7.93
Strongly agree		15.8	6.87
A14c. (IF A14 IS NOT 'N/A') I believe that it is important to spend a lot of time talking to infants and toddlers even before they can understand whatever it is I am saying.	77		
Strongly disagree		3.8	2.12
Disagree		0.0	0.00
Neither agree nor disagree		2.5	1.77
Agree		17.2	4.82
Strongly agree		76.6	5.66
A14d. (IF A14 IS NOT 'N/A') Toddlers can be expected to sit still during group activities like singing and story time.	76		
Strongly disagree		28.4	7.73
Disagree		46.7	8.55
Neither agree nor disagree		17.6	5.53
Agree		6.6	2.94
Strongly agree		0.9	0.83

Table F.5. MSHS Assistant Teachers: Assistant Teacher Beliefs: Infants and Toddlers (Survey, Section A)  
(continued)

Item	<i>n</i>	Percentage (%) of Assistant Teachers	SE
A14e. (IF A14 IS NOT 'N/A') I believe that the way I treat my teaching partners in the classroom will influence how the toddlers behave towards others.	77		
Strongly disagree		1.1	1.00
Disagree		2.2	1.60
Neither agree nor disagree		4.9	3.37
Agree		36.0	7.79
Strongly agree		55.8	7.91
A14f. (IF A14 IS NOT 'N/A') In order to be fair, child care teachers must treat all children alike.	77		
Strongly disagree		1.3	1.04
Disagree		2.8	1.42
Neither agree nor disagree		5.3	1.92
Agree		23.8	5.42
Strongly agree		66.8	6.09
A14g. (IF A14 IS NOT 'N/A') I believe that teachers have to carefully supervise children's development to make sure that it is progressing normally..	77		
Strongly disagree		2.9	2.15
Disagree		1.2	1.05
Neither agree nor disagree		0.5	0.55
Agree		37.2	5.85
Strongly agree		58.0	5.71
A14h. (IF A14 IS NOT 'N/A') Parents have valuable information to share about how teachers can work effectively with their children.	77		
Strongly disagree		1.3	1.04
Disagree		1.0	1.02
Neither agree nor disagree		6.7	3.70
Agree		40.6	6.38
Strongly agree		50.4	6.87
A14i. (IF A14 IS NOT 'N/A') Even though infants or toddlers enjoy their time in child care, parents are still the most important people in their children's lives.	77		
Strongly disagree		2.3	1.96
Disagree		2.0	1.42
Neither agree nor disagree		0.0	0.00
Agree		12.7	4.19
Strongly agree		83.0	5.12

Table F.5. MSHS Assistant Teachers: Assistant Teacher Beliefs: Infants and Toddlers (Survey, Section A)  
(continued)

Item	<i>n</i>	Percentage (%) of Assistant Teachers	<i>SE</i>
A14j. (IF A14 IS NOT 'N/A') It is good for infants and toddlers to experience many different child care providers so they can learn to modify their behavior to meet the demands of others.	75		
Strongly disagree		18.3	5.03
Disagree		43.3	9.72
Neither agree nor disagree		23.7	7.00
Agree		9.9	4.98
Strongly agree		4.8	3.64

Note: For notes and limitations applying to the MSHS Assistant Teacher survey data, see [Guidance for Interpreting Tables in Sections C-G: Surveys and Parent Interview](#).

<sup>1</sup>The survey also asked respondents about Haitian Creole, Mixtec, Kanjobal and Zapotec. One respondent indicated that he or she understands Kanjobal but “not well,” and one respondent indicated that he or she speaks Kanjobal but “not well. For Haitian Creole, Mixtec, and Zapotec, no respondents indicated that they understand, speak, read, or write these languages at any level. For Mixtec, Kanjobal, and Zapotec, only one respondent indicated that he or she spoke that language as a child. No respondents indicated that they spoke Haitian Creole as children. The number of respondents to the questions on Haitian Creole ranged from 77 to 79. The number of respondents to the questions on Mixtec ranged from 77 to 78. The number of respondents to the questions on Kanjobal ranged from 76 to 79. The number of respondents to the questions on Zapotec ranged from 77 to 79.

Table F.13. MSHS Assistant Teachers: Center for Epidemiologic Studies Depression (CES-D) Scale, Reliability and Summary Scores (Survey, Section C)

Scale	<i>n</i>	Number of Items	Cronbach's Alpha	Percentage (%) of Assistant Teachers	Mean	<i>SE</i>	<i>Min</i>	<i>Max</i>
C3. CES-D 12-item scale	96	12	0.84	-	2.41	0.35	0	18
Not depressed		-	-	85.9	-	3.67	-	-
Mildly depressed		-	-	6.4	-	2.37	-	-
Moderately depressed		-	-	5.9	-	2.33	-	-
Severely depressed		-	-	1.8	-	1.32	-	-

Source: CES-D Scale, National Institute of Mental Health

Notes: This table presents both the reliability of scores and summary statistics for this instrument. Reliability information is presented in the first two columns of the first shaded row and includes the sample size (*n*), the number of items included in the reliability estimate, and the Cronbach's alpha, which is a measure of reliability, or internal consistency. Summary statistics are presented in the rest of the table.

Readers should use caution when interpreting results from the CES-D. This measure was developed for research purposes and does not provide a formal diagnosis of depression. A formal diagnosis can only be determined by a trained mental health professional.

The 12-item CES-D summary score was computed by summing the participant's responses to 12 individual items from the CES-D scales in the Teacher Survey, Assistant Teacher Survey, and Parent Interview. Respondents indicated how frequently during the past week they experienced 12 symptoms – feeling bothered, poor appetite, unable to “shake off the blues,” difficulty focusing, depressed, everything was an effort, fearful, restless sleep, less talkative than usual, lonely, sad, and unable to “get going.” Higher scores indicate more frequent symptoms. The categories that appear in the table above were based on the participant's summary score across those 12 items, with not depressed=0 — 4, mildly depressed=5 — 9, moderately depressed=10 — 14, and severely depressed=15 — 36. The same 12-item version of the CES-D Scale has also been used in the FACES and Baby FACES studies.

For notes and limitations applying to the MSHS Assistant Teacher survey data, see [Guidance for Interpreting Tables in Sections C-G: Surveys and Parent Interview](#).

Table F.14. MSHS Assistant Teachers: Additional Supports at Work (Survey, Section D)

Item	<i>n</i>	Percentage (%) of Assistant Teachers	SE
<b>D1. What can help you in your teaching? (Mark all that apply.)</b>	98		
Additional training in...curriculum		48.7	5.09

**SECTION G. DATA TABLES FOR MSHS FAMILY CHARACTERISTICS**

This section presents data tables for information obtained from the Parent Interview. Readers are encouraged to pay careful attention to the following information when reviewing information in this section:

- Notes and limitations applying to the parent interview, which can be found in the section on [Guidance for Interpreting Tables in Sections C-G: Surveys and Parent Interview](#).
- Information about the parent interview can be found in the [MSHS Staff Surveys and Parent Interview](#) section of the [Measures](#) chapter.
- Footnotes provided below each table.

The constructs covered in this section include:

- Child Characteristics ([Table G.1](#))
- Household Member Characteristics ([Table G.2](#))
- Household Linguistic Abilities/Practices ([Table G.3](#))
- Child Health ([Table G.4 – G.5](#))
- Work and Resources ([Table G.6 – G.7](#))
- Household Members' Health ([Table G.8 – G.12](#))
- Raising a Child ([Table G.13 – G.15](#))
- Housing ([Table G.16](#))
- Child Care Arrangements and MSHS Involvement ([Table G.17 – G.20](#))

Table G.1. MSHS Families: Child Characteristics (Parent Interview, Section A)

Item	<i>n</i>	Percentage (%) of Parents	<i>SE</i>
<b>A1. Is [MSHS CHILD] a boy or a girl? (Mark one only.)</b>	640		
Boy		47.9	2.32
Girl		52.1	2.32

Other language		1.1	0.69

Source: MSHS Parent Interview

Note: For notes and limitations applying to the MSHS Parent interview data, see [Guidance for Interpreting Tables in Sections C-G: Surveys and Parent Interview](#).

\* C5a – C5e: The study team constructed these variables using the rankings that parents provided in C5. The smaller sample sizes for C5a – C5e are due to the fact that only those parents who ranked the language of the question (e.g., C5a – English; C5b – Spanish) are included.

\* C5, C6: The study team constructed this item from questions C5 and C6. If Spanish was ranked first or second or was the only language selected for question C5, then the responses to question C6 were used to determine how frequently Spanish was spoken relative to another language.

Table G.4. MSHS Families: Child Health (Parent Interview, Section D)

Item	<i>n</i>	Percentage (%) of Parents	Mean	<i>SE</i>	<i>Min</i>	<i>Max</i>
D1. Overall, would you say [MSHS CHILD]'s health is... (Mark one only.)	639					
Excellent		45.8	-	2.98	-	-
Very good		30.6	-	2.55	-	-
Good		17.3	-	2.49	-	-
Fair or Poor		6.2	-	1.29	-	-
D2. When [YOU WERE/MSHS CHILD'S MOTHER WAS] pregnant with [MSHS CHILD], did you/[MSHS CHILD'S MOTHER] see a doctor or go to a clinic for prenatal care? (Mark one only.)	637					
Yes		97.2	-	0.84	-	-
No		2.8	-	0.84	-	-
D3. Was [MSHS CHILD] born prematurely, that is more than two weeks before [he/she] was due? (Mark one only.)	638					
Yes		11.0	-	1.39	-	-
No		89.0	-	1.39	-	-
D4. How much did [MSHS CHILD] weigh when (he/she) was born? (In pounds)	599	-	7.33	0.06	2	13
D5. Did [YOU/CHILD'S MOTHER] ever breast-feed [MSHS CHILD]? (Mark one only.)	639					
Yes		83.4	-	1.70	-	-
No		16.6	-	1.70	-	-
D6. Does [MSHS CHILD] have teeth yet?	640					
Yes		97.7	-	0.80	-	-

Source: MSHS Parent Interview; Center for Epidemiological Studies Depression Scales, National Institutes of Mental Health

Note: For notes and limitations applying to the MSHS Parent interview data, see [Guidance for Interpreting Tables in Sections C-G: Surveys and Parent Interview](#).

Notes: This table presents both the reliability of scores and summary statistics for this instrument. Reliability information is presented in the first two columns of the first shaded row and includes the sample size (*n*), the number of items included in the reliability estimate, and the Cronbach's alpha, which is a measure of reliability, or internal consistency. Summary statistics are presented in the rest of the table.

Readers should use caution when interpreting results from the CES-D. This measure was developed for research purposes and does not provide a formal diagnosis of depression. A formal diagnosis can only be determined by a trained mental health professional.

The 10-item CES-D summary score was computed by summing the participant's responses to 10 items from the CES-D scale in the Parent Interview. The 10 items asked respondents to report how frequently they experienced happiness, enjoyment of life, depression, feeling everything was an effort, restless sleep, loneliness, sadness, feeling unable to "get going," feeling people were unfriendly, and feeling that people disliked them. Scores for positive items (happiness and enjoyment of life) were reversed, so that higher scores reflected more frequent negative symptoms and/or less frequent positive symptoms, and lower scores reflected less frequent negative symptoms and/or more frequent positive symptoms. The 10-item composite score includes the same items as those used in the MSHS supplement to the National Agricultural Workers Survey (2015). The categories that appear in the table above (does not have elevated depressive symptoms, has elevated depressive symptoms) were based on the participant's summary score across those 10 items, with respondents who had a score of 10 or higher classified as having elevated depressive symptoms.

The 12-item CES-D summary score was computed by summing the participant's responses to 12 individual items from the CES-D scales in the Teacher Survey, Assistant Teacher Survey, and Parent Interview. Respondents indicated how frequently during the past week they experienced 12 symptoms – feeling bothered, poor appetite, unable to "shake off the blues," difficulty focusing, depressed, everything was an effort, fearful, restless sleep, less talkative than usual, lonely, sad, and unable to "get going". Higher scores indicate more frequent symptoms. The categories that appear in the table above were based on the participant's summary score across those 12 items, with not depressed=0 – 4, mildly-depressed=5 – 9, moderately depressed=10 – 14, and severely depressed=15 – 36. The same 12-item version of the CES-D Scale has also been used in the FACES and Baby FACES studies.

Table G.19. MSHS Families: Parent Involvement in MSHS (Parent Interview, Section I)

Item	<i>n</i>	Percentage (%) of Parents	<i>SE</i>
I12. Please indicate how often you have participated in the following activities at [MSHS CHILD]'s center since the beginning of this season. (Mark one per row.)			
I12a. Volunteered or helped out in [MSHS CHILD]'s classroom?	639		
Not yet		70.3	4.34
Once or twice		13.1	1.41
Several times		11.0	2.25
About once a month		2.8	1.07
At least once a week		2.8	1.19
I12b. Attended Head Start social events for children and families?	638		
Not yet		41.6	3.42
Once or twice		28.5	2.06
Several times		21.9	2.22
About once a month		7.1	1.23
At least once a week		0.8	0.50
I12c. Attended parent education meetings or workshops focusing on topics such as job skills or child-rearing?	639		
Not yet		36.6	2.95
Once or twice		31.4	3.34
Several times		20.0	2.61
About once a month		11.7	1.63
At least once a week		0.3	0.20
I12d. Attended parent-teacher conferences?	638		
Not yet		24.5	3.04
Once or twice		37.2	3.98
Several times		25.2	2.47
About once a month		12.5	2.00
At least once a week		0.6	0.32
I12e. Visited with a MSHS staff member in your home?	637		
Not yet		27.3	5.73
Once or twice		55.2	5.68
Several times		13.8	2.07
About once a month		3.7	0.78
At least once a week		0.1	0.12

Table G.19. MSHS Families: Parent Involvement in MSHS (Parent Interview, Section I) (continued)

Item	<i>n</i>	Percentage (%) of Parents	<i>SE</i>
I12f. Participated in a parent Committee or other Head Start planning groups?	634		
Not yet		73.8	2.87
Once or twice		14.1	1.71
Several times		6.5	1.52
About once a month		5.2	1.39
At least once a week		0.3	0.24
I12g. Any other Head Start Activities?	554		
Not yet		83.0	2.41
Once or twice		8.1	1.52
Several times		5.9	1.29
About once a month		1.0	0.38
At least once a week		2.0	0.92

Table G.20. MSHS Families: MSHS Services (Parent Interview, Section I)

Item	<i>n</i>	Percentage (%) of Parents	<i>SE</i>
<b>I13. At [Insert name of Migrant and Seasonal Head Start Center], how often is someone available and able to speak to you in your preferred language? (Mark one only.)</b>	636		
Always		96.5	1.10
Almost Always		2.4	0.90
Sometimes		0.9	0.31
Almost Never		0.2	0.17
Never		0.0	0.00
<b>I14. During the past year, have you or anyone in your household received any of the following from [MSHS PROGRAM]?</b>			
<b>I14a. Help finding good child care when child is not at [MSHS center]</b>	631		
Yes		15.9	1.30
No		84.1	1.30
<b>I14b. Help getting to and from work or other places (transportation)</b>	631		
Yes		14.7	1.62
No		85.3	1.62
<b>I14c. Short-term help getting or paying for things you need in an emergency</b>	627		
Yes		15.0	2.10
No		85.0	2.10
<b>I14d. Help finding a job</b>	627		
Yes		22.4	2.85
No		77.6	2.85
<b>I14e. Education or job training</b>	629		
Yes		25.0	3.11
No		75.0	3.11
<b>I14f. Help finding or paying for housing</b>	619		
Yes		9.3	1.47
No		90.7	1.47
<b>I14g. Help finding health services</b>	630		
Yes		35.1	2.70
No		64.9	2.70
<b>I14h. Help finding mental health or substance abuse services</b>	626		
Yes		16.3	2.22
No		83.7	2.22
<b>I14i. Help with utilities (running water, hot water, heat, telephone service)</b>	626		
Yes		8.3	1.43
No		91.7	1.43

Table G.20. MSHS Families: MSHS Services (Parent Interview, Section I) (continued)

Item	<i>n</i>	Percentage (%) of Parents	<i>SE</i>
I14j. Food and nutrition assistance—like Food Stamps or WIC	627		
Yes		30.8	2.79
No		69.2	2.79
I14k. Income assistance—like welfare TANF, SSI	621		
Yes		9.2	1.76
No		90.8	1.76
I14l. Classes in English as a Second Language	625		
Yes		22.3	2.69
No		77.7	2.69
I14m. Advice from a lawyer	627		
Yes		16.4	2.67
No		83.6	2.67
I15. Please tell me if any of the following have kept you from participating as much as you would like in [MSHS CHILD]'s MSHS program this past season? (Mark all that apply.)	596		
Work schedule		64.9	2.90
Transportation		13.2	1.83
MSHS doesn't provide enough opportunities		2.4	0.67
Uncomfortable because of language or cultural differences		2.4	0.82
Concern for safety getting to the center		0.7	0.32
Other		14.8	3.28
Nothing (N/A)		20.8	2.25
I16. What are the major ways Migrant and Seasonal Head Start helped [MSHS CHILD] this season? (Mark all that apply.)	639		
Child had a place to go		35.9	2.94
Kept child safe		33.9	2.28
Improved health		15.6	1.86
Got ready for school		46.8	2.60
Taught responsibility		38.9	3.17
Made child happy		38.6	2.62
Improved language skills		56.9	3.15
Improved literacy skills		48.1	2.77
Helped child make friends		51.9	3.06
Improved child's behavior		49.6	3.34
Other		24.6	2.67
Nothing (N/A)		0.0	0.00

Table G.20. MSHS Families: MSHS Services (Parent Interview, Section I) (continued)

Item	<i>n</i>	Percentage (%) of Parents	<i>SE</i>
<b>I17. What are the major ways Migrant and Seasonal Head Start helped your family this season? (Mark all that apply.)</b>	629		
Provided steady child care		83.8	3.10
Served as a resource for information		29.5	3.41
Provided material resources		12.3	2.38
Provided links to medical and dental care		20.1	3.54
Improved parenting skills		29.8	3.64
Provided links to other community resources		10.7	1.96
Provided a safe place for families to gather		12.9	2.07
Health care		17.0	3.23
Finances		14.3	2.28
Addressing family conflict		4.9	1.11
Other		16.9	2.16
Nothing (N/A)		1.6	0.85
<b>I18. If Migrant and Seasonal Head Start programs were to receive more money, how should the programs use the money to better serve children and families? (Mark all that apply.)</b>	626		
Extending hours per day		32.6	2.94
Extending days per week		15.5	2.65
Extending weeks or months to season		49.9	3.09
Educational materials		26.7	3.74
Professional staff		25.2	2.90
Facilities		23.9	5.18
Child safety		12.0	2.31
Food		15.3	3.43
Transportation		23.9	3.13
Other		24.6	1.82
Nothing (N/A)		3.9	0.95

## **APPENDIX A. MSHS COPYRIGHT PERMISSIONS**

The study team obtained permission from all publishers listed in Exhibit A-1 (below) to use their measure in the MSHS battery of assessments, teacher reports of children, and parent reports of children. The study team also requested permission to release summary scores and item-level information for each measure as part of an archived dataset with the Inter-University Consortium for Political and Social Research (ICPSR). Publishers granted permission to release item-level information for six of the eight measures (see the last column in Exhibit A-1).

## Exhibit A-1. Permissions Granted

Assessment Measure	Citation	Publisher or Permission Grantor	Permission to Use Measure in MSHS Study	Permission to Release Summary Scores	Permission to Release Item-Level Information
