

Data Visualization Workshop

UN Innovation Network

Hong Qu

Adjunct Lecturer

Harvard Kennedy School

Agenda

- How to create charts and maps using
 - Excel
 - Flourish
 - Datawrapper
 - Tableau
- Highlight to focus attention
 - Annotation
 - Animation
 - Interaction (exploration)
- The annotation layer
- Color and contrast
- Workflow and design process
- Question and discussion
- Software demonstrations

Tableau

Forecast of the 30 Largest Cities in 2035

India and China Has 4 of the top 10 Cities in 2035

Source: Data: United Nations, Department of Economic and Social Affairs, Population Division (2018). World Urbanization Prospects: The 2018 Revision, Online Edition.

“The goal of visualization is to aid our understanding of data by leveraging the human visual system’s **highly tuned** ability to **see patterns**, **spot trends**, and **identify outliers**.”

–Jeffrey Heer, Michael Bostock, Vadim Ogievetsky

Pre-attentive Perception

Pre-attentive processing is the subconscious accumulation of information... All available information is pre-attentively processed. Then, the brain filters and processes what is important. Information that has the highest salience (a stimulus that stands out the most) or relevance to what a person is thinking about is selected for further and more complete analysis by conscious (attentive) processing.

2020's Atlantic hurricane season saw a record 30 named storms

Named storms include tropical storms and hurricanes

The Annotation Layer

“Making a graphic is the equivalent to interviewing your source; but it’s then your job to actually **pick out...the bits the reader should know about.**”

– *John Burn-Murdoch*

[Storytelling with Data](#)

With a focus on simple lessons and practical application, we equip and inspire individuals to take data storytelling to the next level

**understand the
context**

**choose an
effective visual**

**eliminate
clutter**

**focus
attention**

**tell a
story**

Simplicity takes discipline and courage

“I have only made this letter longer because I have not had the time to make it shorter.”
— Blaise Pascal

How people actually “see”

Recap

- Your mission is to enrich:
 1. Data
 2. Information
 3. Story
- Declutter and highlight to focus the viewer's attention
- Make use of the annotation layer
- What makes a good visualization?
 - ✓ Information
 - ✓ Story
 - ✓ Goal
 - ✓ Visual
