

Dell BIOS for Intel Optane Memory Pre-Installation Guide

Notes, cautions, and warnings

 **NOTE:** A NOTE indicates important information that helps you make better use of your product.

 **CAUTION:** A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

 **WARNING:** A WARNING indicates a potential for property damage, personal injury, or death.

Dell BIOS for Intel Optane Memory Pre-Installation

To add an Intel® Optane™ Memory module to your existing Dell system, you will need to ensure that it meets the following requirements:

- The system has a 7th Generation Intel Core processor (Kaby Lake) or later CPU.
- The operating system is Windows 10 Anniversary Update, Redstone 1 (RS1) Version 1607, or later.

Table 1. Dell system names

Dell Product Name	OS Version	RST Driver Version	BIOS Version
OptiPlex 3050			
OptiPlex 5050			1.4.4 or later
OptiPlex 7050	<ul style="list-style-type: none"> • Win 10 x64 bit Redstone1 (RS1) version 1607 or later. 	15.5.0.1051 release or later	
OptiPlex 3050 AIO	<ul style="list-style-type: none"> • GPT partition, UEFI Mode 		
OptiPlex 5250 AIO			1.4.2 or later
OptiPlex 7450 AIO			

- The system has a SATA 3.0 hard disk drive (HDD) as a primary drive. Solid State Drives, Self-Encrypting Drives, and RAID arrays cannot be accelerated with Intel Optane.
- Intel Optane Memory Ready Platform List and its OS, IRST driver, and BIOS (Basic Input / Output System) version.

NOTE: Please refer to the Dell Knowledge Base site and visit the corresponding platform support site for the latest BIOS and driver upgrades.

- How to check the IRST driver version(1) and upgrade to latest: [LinkLink](#)

NOTE: There are two versions of IRST software available from Intel to install the Intel Optane Memory. Dell recommends Intel RST SW/Driver Package Installation version 15.5.1051 or above.

NOTE: There is an Intel OptaneSetup.exe software from the Intel website. This software cannot be installed over the Intel IRST driver. If SetupOptaneMemory.exe needs to be used, the IRST driver has to be un-installed first. Dell installs the Intel IRST User application from the factory, so we recommend using the IRST User Interface application for Intel Optane Memory installation. The softwares can be downloaded from: [Link](#)

- How to check the BIOS version and upgrade to the latest version: [Link](#)

Storage Requirements

- Any SATA Hard Disk Drive (HDD) except 4K Native Format disk
- Intel Optane Memory: Minimum available capacity of 12.5 GB

Additional preparations for systems built before June 2017

Systems built before June/20/2017 require the below additional preparations for the set up. Please visit www.dell.com/support/home and enter the system's service tag to get its shipping date.

- 5 MB of un-allocated partition
- Recovery Image modification (Recommended Optional Step)

5 MB of un-allocated partition

Intel Optane Memory requires 5 MB or larger un-allocated partition at the end of the SATA 3.0 disk volume. This partitioning is used by the IRST driver to store information of the corresponding Optane Memory module. Dell systems shipped after June/20/2017 will already have the un-allocated partition preserved and do not require this to be created. If the shipping date is earlier than June/20/2017, please refer [Downloading Partition Tweak Script](#) and [Running Partition Tweak Script](#) for the procedures to create the partition.

Recovery Image modification (Recommended Optional Step)

For systems shipped prior to June/20/2017, the recovery image does not have the proper IRST driver installed. The user needs to install the correct driver into the recovery image to use it after Intel Optane Memory enablement. Refer the following Intel website for the procedure to install the driver into the recovery image:

- [Video](#)
- Intel Installation Guide section 3 of Installation Media Preparation (Recommended Optional Step): [Link](#)

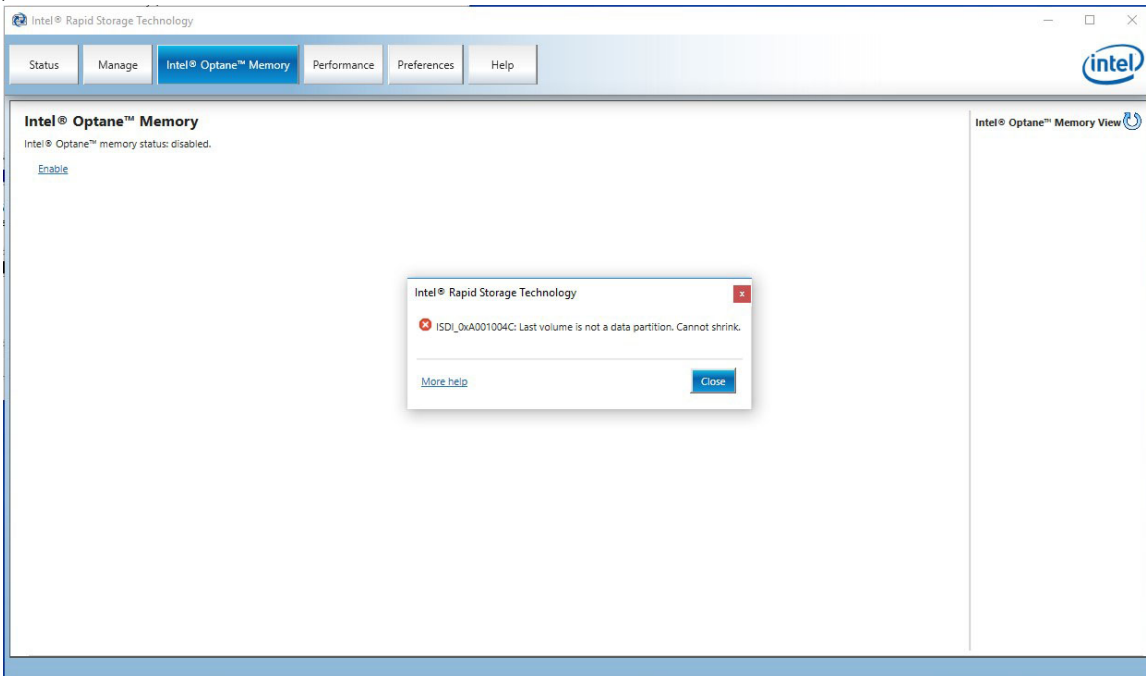

△ CAUTION: If the Intel Optane Memory becomes defective, the system will not boot because the boot loader in the Intel Optane Memory will be lost.

△ CAUTION: Once the Intel Optane Memory is enabled, do not remove the module without properly disabling Intel Optane Memory. Please refer to the disabling procedure on the Intel support site: [Intel Installation Guide section 8.2 Disabling Intel® Optane™ Memory](#)

Downloading the Partition Tweak Script

If the recovery partition of the SATA 3.0 drive is protected from shrinking the volume to create a 5 MB un-allocated partition, the user will encounter the following error messages when enabling Intel Optane Memory: *Error Message: ISDI_0xA001004C: Last volume is not a data partition. Cannot shrink.*

If encountered, the user can download the Partition Tweak Script from the Dell Support site to create the partition. Go to [Dell.com/support](https://www.dell.com/support) and enter your system's **Service Tag** or click **Detect Product** to enable the website to take you to the correct download page. Alternately, you can select **Choose from all products** and navigate to **Desktops & All-in-Ones > OptiPlex >** and select your OptiPlex system from the list. Then, select **Drivers & Downloads > Application > Partition Tweak Script for Optane**

The script uses the Microsoft Diskpart.exe tool in Windows 10 OS and changes the Partition Type from Recovery to Basic Data Partition GUID to shrink the partition for 5 MB. Then it changes back to the Recovery type.

⚠ CAUTION: You may suffer data loss if you are running this utility in other platforms OR running this utility without the Intel Optane Memory Customer Kit from Dell. Dell will not be liable for such data losses. YOU WILL BE SOLELY RESPONSIBLE FOR ANY DAMAGE TO YOUR COMPUTER SYSTEM OR OTHER DEVICE OR LOSS OF DATA THAT RESULTS FROM THE DOWNLOAD OF OR RUNNING THE UTILITY.

Running the Partition Tweak Script

Carry out the following steps to run the Partition Tweak Script for Optane:

- 1 Unzip the downloaded script to see the following script batch file within the unzipped folder:

A screenshot of a file explorer window showing a single file named "FreeSpaceFromLastRecoveryPartition_Disk0_V15.bat". The file icon is a blue document with a white 'A' symbol, indicating it is a batch file. The file name is displayed in a blue box with a white border.

- 2 Select *Partition Tweak Script A01.bat* file and run the batch file by right-clicking the file. Then, select the **Run as Administrator** option.
- 3 You may get a User Account Control (UAC) prompt to approve running the batch file. If you see this pop-up, click **Yes**
- 4 You will see a command line window open and several commands executed as the batch file re-allocates space from the recovery partition to allow the Intel Optane setup to install correctly.

 **NOTE:** Custom Windows 10 installations that do not contain the Dell Factory Recovery partition will not require this step.

- 5 Once completed, and you confirm the process completed successfully, close the Command Prompt Window if it does not close automatically.

Installing the Intel Rapid Storage Technology (IRST)

Carry out the following steps to run the Intel Rapid Storage Technology driver:

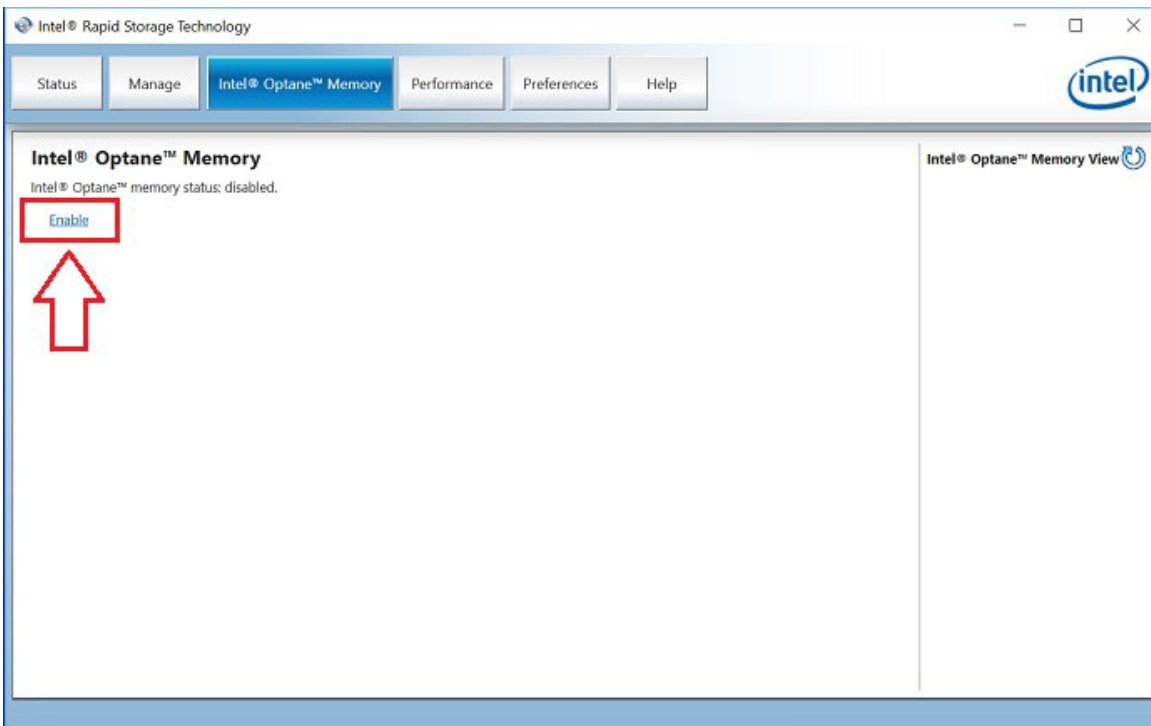

- 1 Open the Intel Rapid Storage Technology (IRST) from the start menu tile.

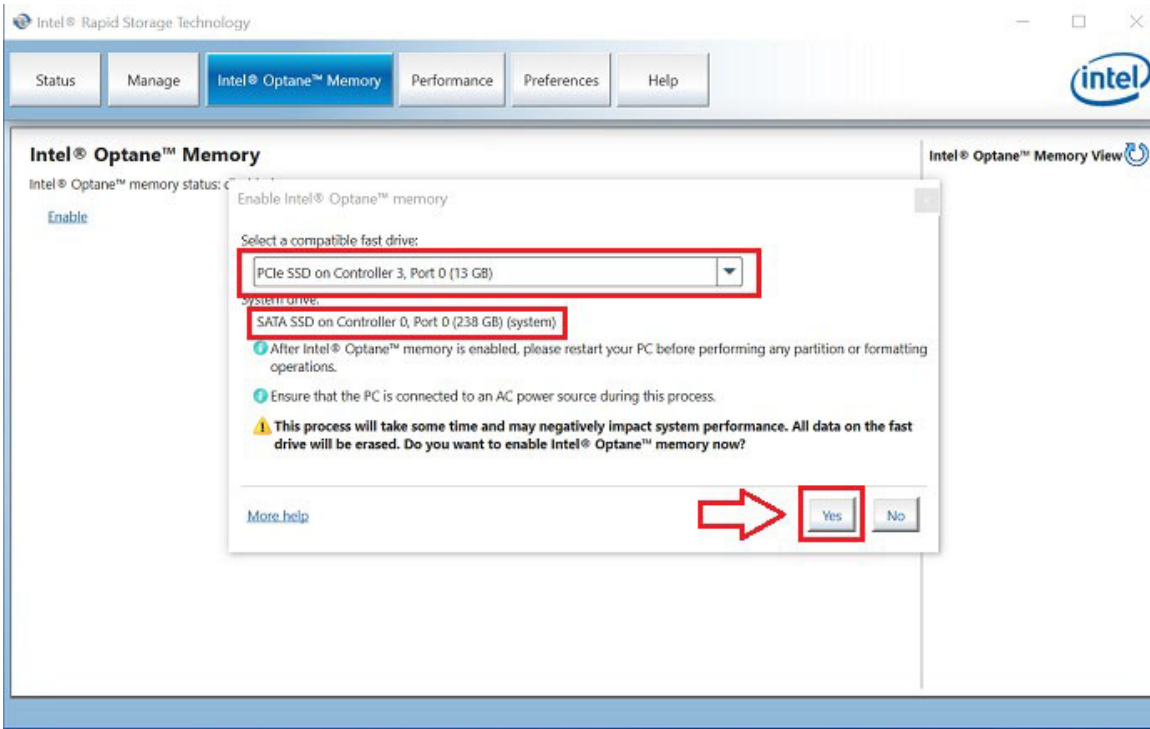

- 2 Click **Intel Optane Memory** to access the configuration options.

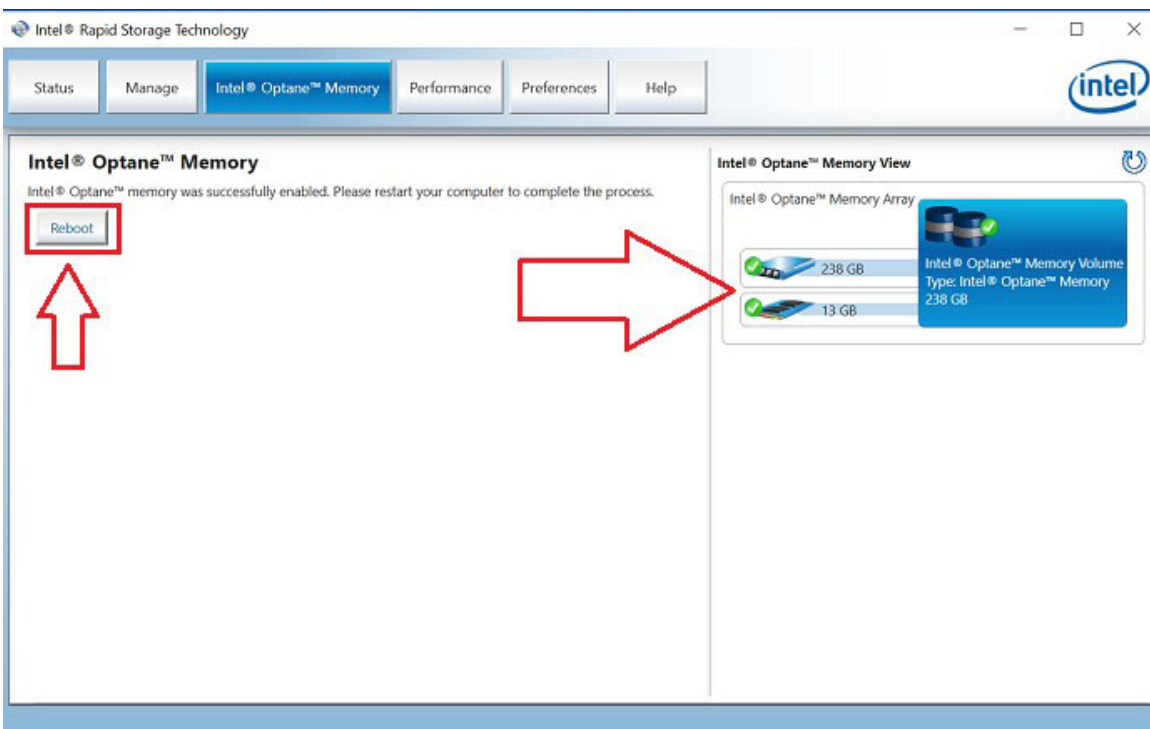

- 3 Click **Enable** in the IRST interface to pair the Intel Optane Memory module with the SATA 3.0 drive.

- 4 You will see a pop-up showing the Intel Optane Memory device and the system drive that the memory device will pair with. Click **Yes**.

- Once the pairing is complete, click the **Reboot** to complete the Intel Optane Memory configuration. You will also note that the SATA Drive and the Intel Optane Memory device are now shown as an Optane Memory Array.

- After the system restarts, you can open the Intel Rapid Storage Technology application from the top of the start menu. If you click the Intel Optane Memory tab, you will now see that the hyperlink option is now "Disable", indicating that Intel Optane Memory is enabled.

NOTE: For any error code encountered when installing the Intel Optane Memory, please see the Intel website for decoding and solutions: [Error Codes and Messages While Enabling and Disabling Intel® Optane™ Memory](#)

Getting help

Contacting Dell

NOTE: If you do not have an active Internet connection, you can find contact information on your purchase invoice, packing slip, bill, or Dell product catalog.

Dell provides several online and telephone-based support and service options. Availability varies by country and product, and some services may not be available in your area. To contact Dell for sales, technical support, or customer service issues:

- 1 Go to **Dell.com/support**.
- 2 Select your support category.
- 3 Verify your country or region in the **Choose a Country/Region** drop-down list at the bottom of the page.
- 4 Select the appropriate service or support link based on your need.
